¹⁾ The thermal releases are calibrated to a nominal reference ambient temperature; for K the reference example value is 40°C acc. to UL489. In case of higher ambient temperatures, the current values decline by approx. 4 % for each 10 K temperature rise.

²⁾ The indicated tripping values of electromagnetic tripping devices apply to a frequency of 0/60 Hz. The thermal release operates independently from the frequency.

Influence of adjacent devices

If several miniature circuit breakers are installed directly side by side with high load on all poles, a correction factor has to be applied to the rated current (see table). If distance pieces (spacers) are used, the factor is not to be considered.
