

ABB component drives

ACS55, 0.25 to 3 hp / 0.18 to 2.2 kW

ABB component drives are designed to be incorporated into a wide variety of simple machines such as automatic gates, conveyors, exercise equipment, industrial ovens and other applications in commercial environments. The drives work with single phase power supply and are widely available and through the ABB's distribution network

Drive parameters are easily set by configuring the drive's DIP switches and potentiometers on the front panel. For volume configuration, the optional DriveConfig kit, which includes PC software, can be used. DriveConfig provides advanced drive configuration options with different macros for default I/O connections. DriveConfig can even be used to configure unpowered drives.
