

Power supply systems have to be highly reliable in most areas of energy management and automation technology.
Often batteries are used for supporting the supply system in case of mains failures. Batteries have limited lifetimes depending on environmental parameters and have to be maintained regularly, which causes efforts and costs.

Using the latest ultra-capacitor technology, ABB offers an innovative and completely maintenance free new product for buffering the 24 V DC supply in case of interrupted mains on the primary side of the switch mode power supply.

The CP-B range is an ultra-capacitor buffer energy storage for power supply units which ensures a short term uninterrupted power supply system. In case of a power loss, the energy stored in the capacitor guarantees that the load is continually provided up to several hundred seconds depending on the load current.

Application example

Characteristics

- 3 buffer modules for buffering 24 V DC: CP-B 24/3.0 (3 A / 1 kWs ${ }^{1}$ ) CP-B 24/10.0 (10 A / $10 \mathrm{kWs}^{1}$ ) CP-B 24/20.0 (20 A / $8 \mathrm{kWs}^{1}$ )
- CP-B 24/3.0 and CP-B 24/20.0 expandable with additional extension module(s) CP-B EXT. $2\left(2 \mathrm{kWs}{ }^{1}\right.$ )
- LEDs for status indication
- Relay contacts for status messaging
- Very high backup times (e.g. with CP-B 24/10.0 up to 8 minutes at 1 A load current)
- Short charging times
- High efficiency, higher than 90\%
- Wide temperature range
- DIN rail mountable, compact enclosures
- Advantages in comparison to battery buffers
- Maintenance free
- No deep discharge
- Temperature resistant
- 【unis approval (UL508, CSA22.2 No 14) ${ }^{2}$
${ }^{1)}$ internal energy buffer; ${ }^{2)}$ pending

## ABB

Electronic Protection Devices

## for use behind 24 V DC Switch Mode Power Supplies

The protection devices EPD24 extend the ABB product range of modular DIN rail components by electronic overcurrent protection modules for selective protection of 24V DC load circuits.

This protection is achieved by a combination of active electronic current limitation in the case of a short circuit and an overload deactivation from $1.1 \times \mathrm{I}_{\mathrm{n}}$ upwards.

If a fault occurs in a load circuit, the protection device EPD24 will detect this rapidly and reliably, disable the power output transistor and hence interrupt the current flow in the defective circuit. The maximum possible overcurrent is always limited to $1.5 \ldots 1.8$ times the selected rated current. An activation of capacitive loads up to $20,000 \mu \mathrm{~F}$ is possible, deactivation only occurring in the case of overloads or short circuits. Selective deactivation of the defective current circuit means undefined error states and a complete system stop are prevented.
Features

- Selective load protection one, electronic trip characteristics.
- Active current limitation for safe connection of capacitive loads up to $20,000 \mu \mathrm{~F}$ and on overload/short circuit.
- Current ratings 0.5 A... 12 A .
- Reliable overload disconnection with $1.1 \times \mathrm{I}_{\mathrm{N}}$
- Manual ON/OFF button
- Clear status and failure indication through LED and auxiliary contact.
- Integral fail-safe element adjusted to current rating.
- Width per unit only 12.5 mm .
- Rail mounting
- Ease of wiring through busbar LINE+ and 0 V as well as signal bars.
- UL- and CSA-approvals allow international use of the devices.

Technical details
EPD 24-TB-101

Time/Current characteristic curve ( $\mathrm{T}_{\mathrm{u}}=25^{\circ} \mathrm{C}$ )

- The trip time is typically 3 s in the range between 1.1 and $1.8 \times \mathrm{I}_{\mathrm{N}}{ }^{11}$.
- Electronic current limitation occurs at typically $1.8 \times I_{N}{ }^{1}$ ) which means that under all overload conditions (independent of the power supply and the resistance of the load circuit) the max. overload before disconnection will not exceed $1.8 \times I_{N}{ }^{11}$ times the current rating. Trip time is between 100 ms and 3 sec (depending on overload or at short circuit).
- Without this current limitation a considerably higher overload current would flow in the event of an overload or short circuit.

${ }^{1)}$ Current limitation typically $1.8 \times \mathrm{I}_{\mathrm{N}}$ at $\mathrm{I}_{\mathrm{N}}=0.5 \mathrm{~A} . . .6 \mathrm{~A}$
Current limitation typically $1.5 \times \mathrm{I}_{\mathrm{N}}$ at $\mathrm{I}_{\mathrm{N}}=8 \mathrm{~A}$ or 10 A
Current limitation typically $1.3 \times \mathrm{I}_{\mathrm{N}}$ at $\mathrm{I}_{\mathrm{N}}=12 \mathrm{~A}$
Maximum cable lenghts
EPD24 reliably trips from $0 \Omega$ up to max. circuit resistance $R_{\text {max }}$.
Calculation of $\mathbf{R}_{\text {max }}$

[^1]Example 3: mixed wiring: (Control cabinet --- sensor/actuator level) R1 $=40 \mathrm{~m}$ for $1.5 \mathrm{~mm}^{2}$ and R2 $=5 \mathrm{~m}$ for $0.25 \mathrm{~mm}^{2}$ : $R 1=0.95 \Omega, R 2=0.71 \Omega$, total $(R 1+R 2)=1.66 \Omega$

## Please note

The user should ensure that the cable cross sections of the relevant load circuit are suitable for the current rating of the EPD24 used. Automatic start-up of machinery after shut down must be prevented (Machinery Directive 98/37/EG and EN 60204-1). In the event of a short circuit or overload the load circuit will be disconnected electronically by the EPD24.

Information on UL approvals/CSA approvals

## T

 UL1604
## Operating Temperature Code T5

- This equipment is suitable for use in Class I, Division 2, Groups A, B, C and D or non-hazardous locations only

## WARNING:

- Exposure to some chemicals may degrade the sealing properties of materials used in the following device: relay Sealant Material:

Generic Name: Modified diglycidyl ether of bisphenol A
Supplier: Fine Polymers Corporation
Type: Epi Fine 4616L-160PK
Casing Material:
Generic Name: Liquid Crystal Polymer
Supplier: Sumitomo Chemical
Type: E4008, E4009, or E6008

## RECOMMENDATION:

- Periodically inspect the device named above for any degradation of properties and replace if degradation is found

WARNING - EXPLOSION HAZARD:

- Do not disconnect equipment unless power has been removed or the area is known to be non-hazardous
- Substitution of any components may impair suitability for Class I, Division 2

UL2367
Non-hazardous use
UL 508
Non-hazardous use

CSA C22.2 No. 213 (Class I, Division 2)
CSA C22.2 No. 142

Class 2
Meets requirement for Class 2 current limitation (EPD24 ... -0,5 A/1 A/2 A/3 A)

Technical details
EPD 24-TB-101,

The EPD24 features an integral power distribution system.
The following wiring modes are possible with various pluggable current and signal busbars:

- LINE+ (24 V DC)
- 0 V

Caution: The electronic devices EPD24 require a 0 V connection

- Auxiliary contacts

## Mounting procedure

Before wiring insert busbars into protector block. A maximum of 10 connection cycles are permissible using connecting busbars.

## Recommendation

After 10 units the busbars should be interrupted and receive a new entry live.
Table of length for busbars
(Order code 2CDE605100R0500)

| No. of units | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
