## AD SwitchLine <br> Non-fusible disconnect switches 16A - 3150A, 600V

ABB SwitchLine includes 16 different amperage sizes from 16A to 3150A. The basic construction provides flexibility, safety, and high performance in an extremely compact size. ABB SwitchLine is a perfect choice for all switching applications from industrial motor control to construction safety switches.

(4) IEC 947-3 Utilization Category B, Infrequent operation

## General information

## Versatility

ABB SwitchLine non-fusible disconnect switches are designed to offer maximum versatility in many ways.

## Broad range

SwitchLine is seventeen amperage sizes from 16A - 3150A. All sizes are compact, heavy duty, 600 V disconnect switches. Many sizes are available in 2, 3, 4, 6, and 8 pole configurations.

## Compact size

The SwitchLine's compact dimensions allow panel size reduction in new applications or easily retrofit into space-sensitive existing installations.

## International acceptance

UL listed, CSA approved, IEC rated, CE marked, and most other international standards.
UL98 (CSA 22.2 No.4) - UL File \#E101914, CSA File \#LR58077
For OT30, OT60, OT100, OT160, OT200, OT400, OETL-NF600 - OETL-NF2000 switches,

OH pistol grip handles
Suitable for use as motor disconnects or industrial control panel disconnects on service entrance equipment, panelboards, switchboards, industrial control equipment, motor control centers, etc. and are horsepower rated and ampere rated.
UL508 (CSA 22.2 No. 14) - UL File \#E63822, CSA File \#LR58247
For OT16 - OT63 switches, OH_ selector handles
Suitable for use in equipment or machinery as motor controllers \& motor disconnects and are horsepower and ampere rated.
IEC
Tested in accordance to IEC 947-1 and 3, IEC 664, IEC 269, and IEC 204
CE
Compliance with the European Machine Directive IEC 204 (EN 60204)

## Installation options

Rotary through the door: available in all sizes, 16A - 3150A
Flange: versions available in 30A, 60A, 100A, \& 200A sizes
A rotary disconnect switch may be installed nearly anywhere in a control panel - mounting is not limited to the upper right hand corner of the panel.
Mount the switch where it conveniently fits in your panel and simply install the handle on the door, in line with the switch. The switch and handle are mechanically linked through an easily adjusted shaft. This allows fast and easy installation into panels of different depths and layouts.

Rotary through the door installation

Easily adjusted shaft

Lower installed costs

## General information

## Broad range of accessories

- Handles - UL/NEMA type 1, 3R, 4, 4X, 12;

IP54, 65, 66

- Auxiliary contacts available for every switch size
- Additional power poles
- Additional terminal poles (neutrals \& grounds)
- Terminal shrouds
- 6 \& 8 pole mechanisms
- Transfer mechanisms
- Bypass mechanisms
- Mechanical interlock mechanisms
- Electro-mechanical interlock mechanisms
- Motor operators

SwitchLine disconnect switches may be mounted in any position:

## Mounting

SwitchLine disconnect switches offer several mounting possibilities:

- Door mounting on an enclosure door or sidewall, 16A - 125A
- DIN rail mounting, 16A - 125A
- Base mounting with screws, 16A - 3150A

Incoming power feeds
SwitchLine disconnect switches can be used equally well with either top or bottom incoming power feeds.

## Terminal connections

Versatile connecting possibilities, 200A-3150A:

- Ring tongue crimp on lugs
- Direct bus
- Terminal lugs

## General information

## Modular construction

Modular switch construction allows the operating mechanism to be placed at either end of the switch or anywhere in-between, 125A - 3150A.

## Door interlock

The handle and shaft provide a door interlock; the door can not be opened when the switch is in the "ON" position. NOTE: Some handles provide a method for qualified personnel to circumvent the door interlock. This is commonly referred to as a "defeater" mechanism.

## Finger proof

Dead-front construction plus terminal shrouds reduce the risk of touching live parts, improving the safety and reliability of the installation.

## Padlockable

Handles can be padlocked in the "OFF" position with up to three padlocks: Additionally, the switch mechanism can be directly padlocked in the "OFF" position when the door is open. NOTE: Some handles can be ordered with the ability to padlock in both the "ON" \& "OFF" positions, please consult your ABB sales office.

## Positive opening operation

All switches operate according to the "positive opening operation" principle. This means the contacts are opened and closed by a driven mechanism, a solid moving bridge, not merely springs. This provides reliable position indication to the user; if the switch is in the "OFF" position, the contacts are open.

[^0]
## General information

## Welded contact protection

Positive opening operation safeguards users in case of welded contacts due to an overload or short circuit.
The switch can not reach the "OFF" position unless the contacts are truly open. If any or all of the contacts are welded shut, the switch mechanism will only allow the handle to operate a maximum of $45^{\circ}$. This safeguards personnel by:

- alerting them a problem has occurred
- maintaining the door interlock and
- not allowing a padlock to be inserted.

## Clear position indication

All switches and handles have clear "ON" and "OFF" designations. Whether the door is open or closed, it is possible to simply look at the switch and determine if the switch is "ON" or "OFF".

## Visible blades

Visible blades offer additional safety from 125A - 1200A.

## Track resistant material

Excellent track resistant material, CTI > 600V, IEC 112 , reduces the risk of flashover between phases in even the most severe circumstances.

## C onstant control

The OT16E3 to OT100E3 provide the user with constant control over the power circuit. Whether the enclosure door is open or closed, qualified personnel have the ability to manually operate the switch. This is most meaningful when qualified personnel are working with the enclosure door open: In case of an emergency down-stream, the main three phase power can be disconnected immediately using the red, direct mounted handle.

[^0]:    (1) Please consult $A B B$ sales office for additional information.
