

Double Level Terminal Blocks

The ASIUK series of double level terminal blocks provides for 2 separate circuits, 4 terminations all in the same terminal block thereby saving 50% of the space. The upper level is offset from the bottom level making access to wiring and the terminal screws much easier. The ASIUKK5 can be bridged on the upper level while the ASIUKKB5 can be bridged on both the upper and the lower levels. The ASIUKK series uses the same quality design features and materials as the ASIUKN series and are completely interchangeable with similar products on the market.

Pluggable Terminal Blocks

This Terminal Block mounts on a DIN rail like other IEC terminal blocks however one side is a pin header on 5.08mm spacing that accepts the popular plug-in terminal blocks. Now your application can provide for a complete circuit from 2 to 20 positions to be mated and unmated in a one action making installation, testing and troubleshooting very easy and convenient.. Both the terminal block and the plug are polarized so that they can only be mated in one direction thus reducing errors. With the wide selection of terminal block plugs that ASI offers, you can select in what direction you would like the wire to exit from the plug. The part numbers and specifications on the plugs can be found at www.asi-ez.com.
