

ADOD Series Automotive Delay-On-Dropout Timer

- Solid State Digital Circuitry
- Automotive Voltage Range
- Delay-On-Dropout Function
- 40 Ampere SPST Relay Contact (Form A)
- Compact Size

TIMING MODE:

12 volt power is applied to the relay at all times. When the ignition circuit of the vehicle is activated the relay contacts close. When the ignition circuit is turned off the timing cycle begins. At the end of the time delay the relay contacts open. Reset is accomplished by reactivating the ignition circuit of the vehicle.
