DeviceNet Digital Remote I/O

▣ Features

- Automatic communication speed recognition
  : Enables to recognize communication speed automatically when connecting with master
- Network Voltage monitoring
  : If PV is lower than SV, enables to receive error flag for network power monitoring as Explicit message.
- Additional expansion units
  - Standard terminal block type: Connectable up to 3 expansion units
  - Sensor connector type: Connectable up to 7 expansion units
  - Expandable I/O points up to max. 64 points for Standard terminal type, sensor connector type
- Reading the number of expansion units
  : Reads the number of connected expansion units
- Reading model name: Reads the connected model name of connected units (sensor connector type)
- Reading the unit specifications: Reads the specifications of connected units

Standard terminal block type

Sensor connector type

⚠ **Please read "Safety Considerations" in the instruction manual before using.**

CE DeviceNet™ CONFORMANCE TESTED

▣ Ordering Information

AR D – D I 08 A E – 4S

Terminal block※2	No-mark	Standard terminal block type		
	4S	Sensor connector type (4-pin socket)		
Structure	No-mark	Basic unit		
	E※4	Expansion unit		
I/O specification※1	A	AC voltage	R	Relay
	N	NPN open collector	S	SSR
	P	PNP open collector		
I/O point	08	8 points type		
	16	16 points type		
I/O type	I	Input type		
	O	Output type		
	X	I/O mixed type		
Digital/Analog	D	Digital type		
	A※5	Analog type		
Network	D	Basic unit (DeviceNet)		
	X※3	Expansion unit (DeviceNet/Modbus)		
Item	AR	Autonics Remote I/O		

※1: Sensor connector type (ARD-□-4S) model is only for NPN, PNP I/O specifications.
※2: Sensor connector (CNE-P04-□) is sold separately.
※3: It is only for an expansion unit of sensor connector type.
※4: It is only for an expansion unit of standard terminal block type.
※5: For analog type, refer to '**ARD-A Series**'.

▣ Models

Models			Specification
Terminal type	Basic unit	Expansion unit	
Standard terminal block type	ARD-DI08A	ARD-DI08AE	75-250VAC input 8-point (13mA/point)
	ARD-DI16N	ARD-DI16NE	10-28VDC NPN input 16-point (10mA/point)
	ARD-DI16P	ARD-DI16PE	10-28VDC PNP input 16-point (10mA/point)
	ARD-DO08R	ARD-DO08RE	Relay output 8-point (2A/point), Life cycle of contact: 100,000 times
	ARD-DO08S	ARD-DO08SE	SSR output 8-point (1A/point)
	ARD-DO16N	ARD-DO16NE	10-28VDC NPN output 16-point (0.5A/point)
	ARD-DO16P	ARD-DO16PE	10-28VDC PNP output 16-point (0.5A/point)
	ARD-DX16N	ARD-DX16NE	10-28VDC NPN input 8-point (10mA/point), NPN output 8-point (0.5A/point)
	ARD-DX16P	ARD-DX16PE	10-28VDC PNP input 8-point (10mA/point), PNP output 8-point (0.5A/point)
Sensor connector type	ARD-DI08N-4S	ARX-DI08N-4S	10-28VDC NPN input 8-point (10mA/point)
	ARD-DI08P-4S	ARX-DI08P-4S	10-28VDC PNP input 8-point (10mA/point)
	ARD-DO08N-4S	ARX-DO08N-4S	10-28VDC NPN output 8-point (0.3A/point)
	ARD-DO08P-4S	ARX-DO08P-4S	10-28VDC PNP output 8-point (0.3A/point)

▣ Specifications

▣ DeviceNet Communication

Item	Specifications
Communication	I/O Slave messaging (Group 2 Only slave) ·Poll command: Yes ·Bit_strobe command: Yes ·Cyclic command: Yes ·COS command: Yes
Communication distance	Max. 500m (125kbps), Max. 250m (250kbps), Max. 100m (500kbps)
NODE ADDRESS setting	Max. 64 nodes (set by the front rotary switch)
Communication speed※1	125, 250, 500kbps (automatically set when connecting with Master)
Insulation	I/O and inner circuit: Photocoupler isolated, DeviceNet and inner circuit: non-isolated, DeviceNet power: non-isolated
DeviceNet power	· Rated voltage: 24VDC⎓ · Voltage range: 12-28VDC⎓ · Power consumption: max. 3W
Approval	ODVA Conformance tested

※1. The communication speed is automatically set to the communication speed of the Master (PC, PLC, etc.) When changing the communication speed during operation, the network status (NS) LED flashes in red and communication is not possible.

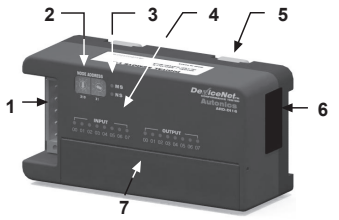
▣ Communication Distance

Baud rate	Max. network length	Max. branch line length	Max. extended branch line length
125kbps	500m	6m	156m
250kbps	250m	6m	78m
500kbps	100m	6m	39m

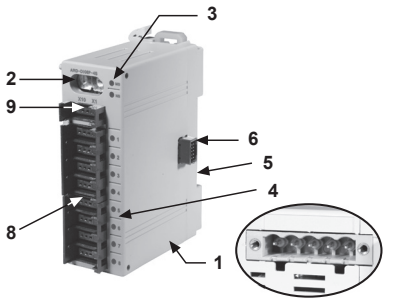
▣ Unit Description

◎ Basic unit

● Standard terminal block type



● Sensor connector type



1. DeviceNet connector

No.	Color	For	Organization
5	Red	24VDC (+)	V+
4	White	CAN_H	CAN_H
3	None	Shield	SHIELD
2	Blue	CAN_L	CAN_L
1	Black	24VDC (-)	V-

2. Rotary switch for node address
: Rotary switch for setting node address.
×10 represents tens digit and ×1 represents ones digit.

3. Status LED: It displays the status of unit (MS) and network (NS).

4. I/O status LED: It displays each I/O status.

5. Rail lock: It is used for mounting DIN rail or with bolt.

6. Connector output part: It connects an expansion unit.

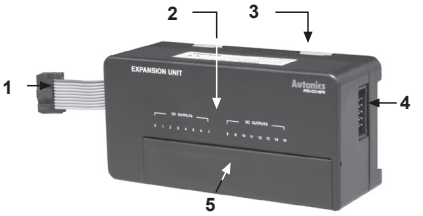
7. I/O terminal block: It is used for connecting external device I/O.

8. Sensor connector: It is used for connecting external device I/O.

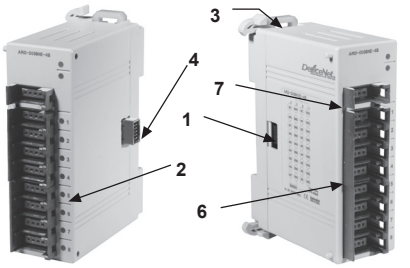
9. External power connector: It is used for supplying external power.

◎ Expansion unit

● Standard terminal block type



● Sensor connector type



1. Connector input part
: It connects expansion unit and is joined into expansion connector output.

2. I/O status LED: It displays each I/O status.

3. Rail lock: It is used for mounting DIN rail or with bolt.

4. Connector output part: It connects an expansion unit.

5. I/O terminal block: It is used for connecting external device I/O.

6. Sensor connector: It is used for connecting external device I/O.

7. External power connector: It is used for supplying external power

▣ Status LED

(☼: ON, ◑: Flash, ●: OFF)

Item	LED status		Description
	Red	Green	
Unit status (MS) LED	☼	●	Unrecoverable error
	◑	●	Recoverable error & communication error of expansion unit
	●	☼	Normal operation
	●	●	Power is not supplied
Network status (NS) LED	●	◑	Normal standby
	●	☼	Network On-Line
	☼	●	Duplicate, MAC ID / Bus-Off
	◑	●	Time Out
	●	●	Network Off-Line

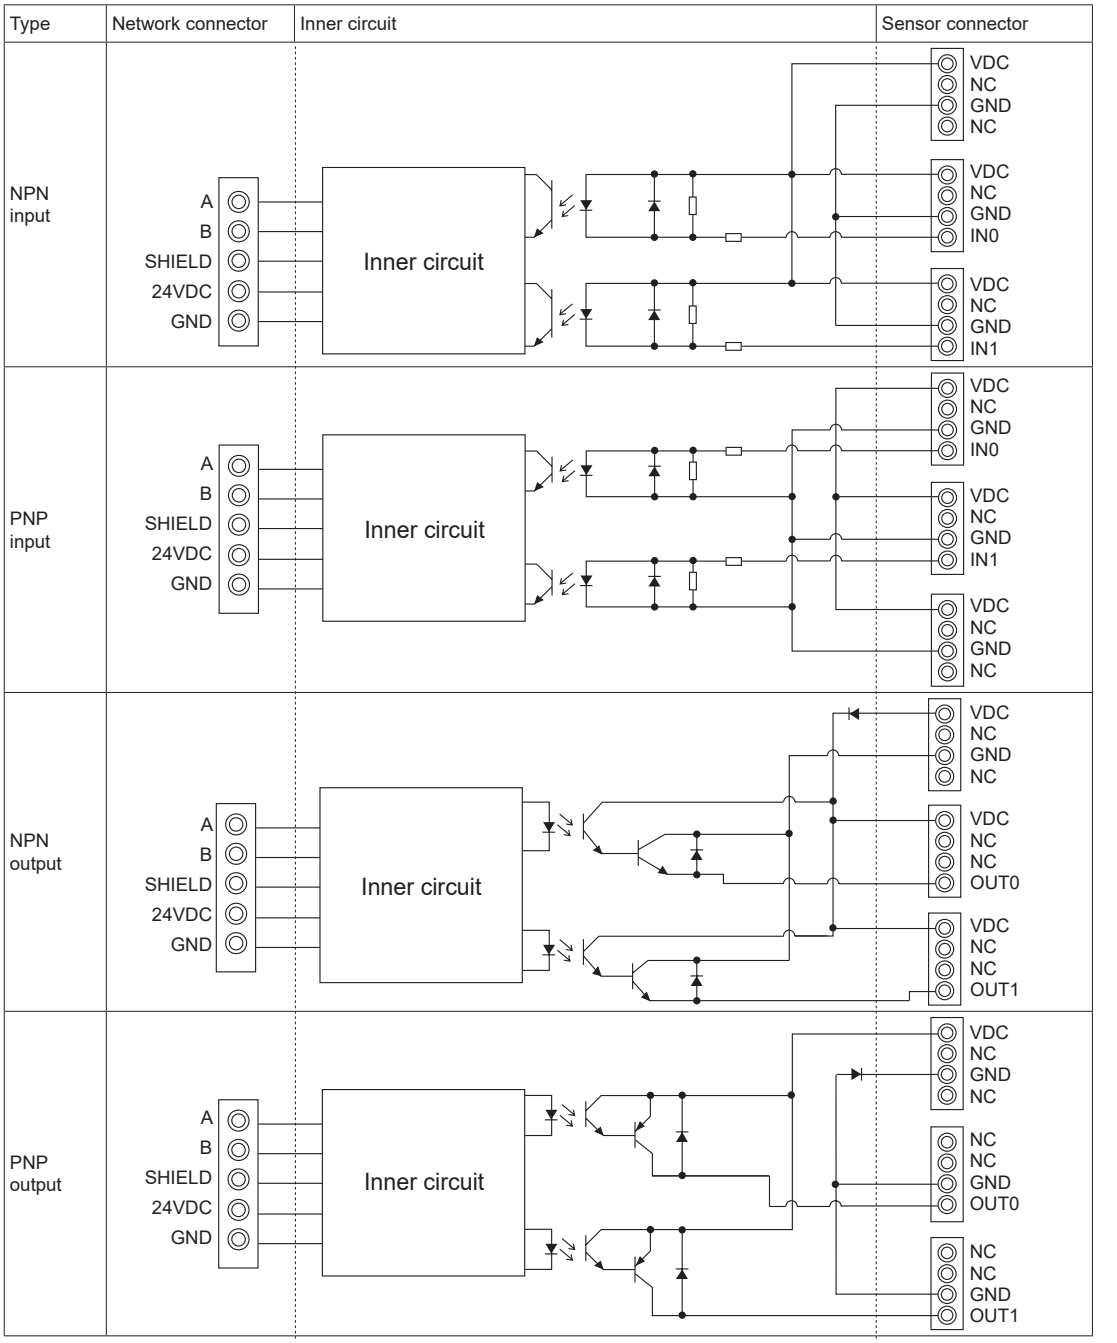
▣ I/O Circuit Diagram

◎ Standard terminal block type

Type	DeviceNet connector	Inner circuit	External connections
NPN input			
PNP input			
AC input			
NPN output			
PNP output			
Relay output			
SSR output			

▣ I/O Circuit Diagram

◎ Sensor connector type

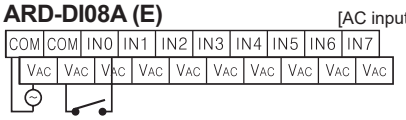


▣ Connections

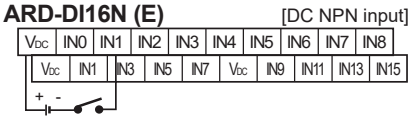
◎ Standard terminal block type

※ When wiring the communication connector, use cable and tap which meet the DeviceNet standard and tighten the connector screw with a tightening torque of 0.5N·m.
※ When wiring the input/output terminal, tighten the connector screw with a tightening torque of 0.5N·m.

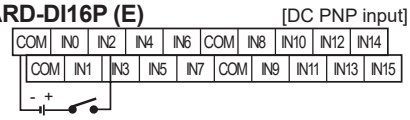
● ARD-DI08A (E) [AC input]



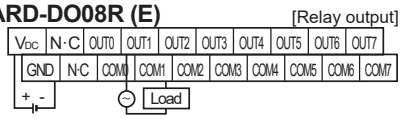
● ARD-DI16N (E) [DC NPN input]



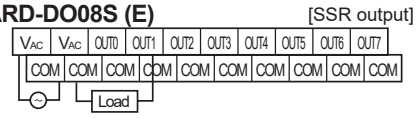
● ARD-DI16P (E) [DC PNP input]



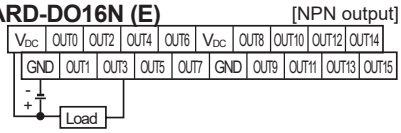
● ARD-DO08R (E) [Relay output]



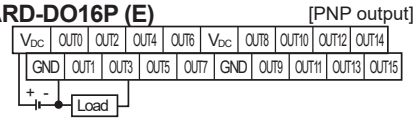
● ARD-DO08S (E) [SSR output]



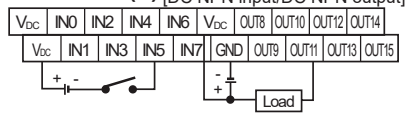
● ARD-DO16N (E) [NPN output]



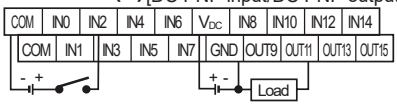
● ARD-DO16P (E) [PNP output]



● ARD-DX16N (E) [DC NPN input/DC NPN output]



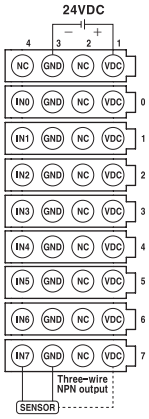
● ARD-DX16P (E) [DC PNP input/DC PNP output]



◎ Sensor connector type

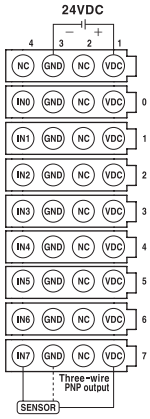
※When wiring the communication connector, use cable and tap which meet the DeviceNet standard and tighten the connector screw with a tightening torque of 0.5N·m.

● AR□-DI08N-4S



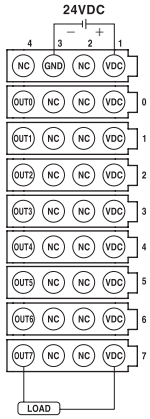
IN (NPN): 8P, 24VDC 10mA

● AR□-DI08P-4S



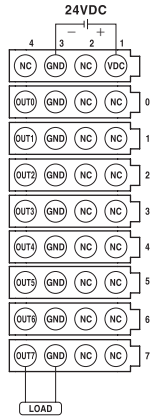
IN (PNP): 8P, 24VDC 10mA

● AR□-DO08N-4S



OUT (NPN): 8P, 24VDC 0.3A/Point

● AR□-DO08P-4S



OUT (PNP): 8P, 24VDC 0.3A/Point

▣ Terminating Resistance

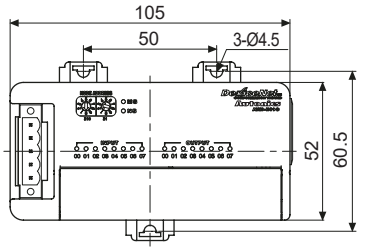
● 120Ω ● 1% of metallic film ● 1/2W
※Do not install terminating resistance on the unit, or it may cause network terminating problem (impedance can be too high or low) and trouble.
※Connect terminating resistance on the both ends of the trunk line.

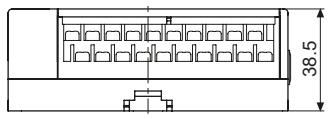
▣ Dimensions

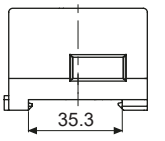
※Same dimensions are applied to both basic and expansion unit.
※Tightening torque for mounting bolts: 1.8 to 2.5N·m

(unit: mm)

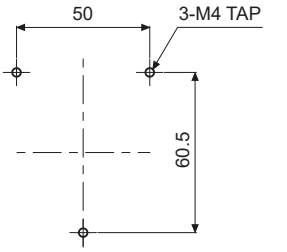
◎ Standard terminal block type



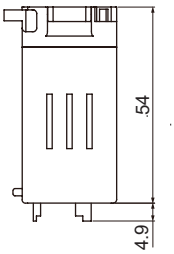




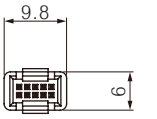
● Panel cut-out

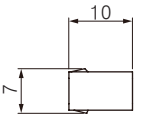


◎ Sensor connector type

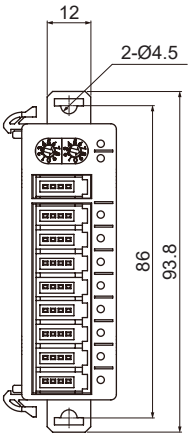


● Expansion connector
(supplied only for expansion unit)

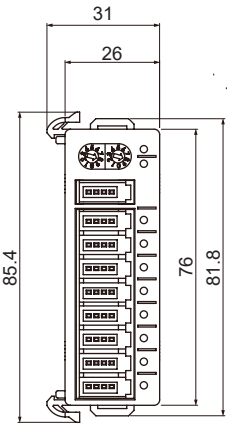


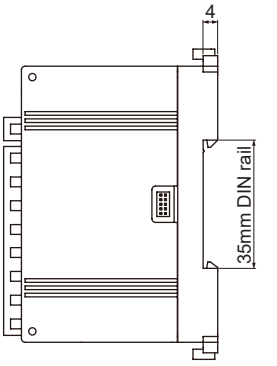


● Rail lock position: mounting with bolt



● Rail lock position: mounting on DIN rail





● Panel cut-out

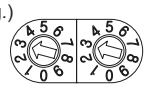
▣ Setup and Installation

◎ Setting Node address

① Two rotary switches are used for setting node address. The ×10 switch represents tens digit and the ×1 switch represents ones digit. The node address can be set 00 to 63.
② After setting the desired node address, re-supply the unit power for applying the changed node address.

※The NODE ADDRESS of the connected unit must not be duplicated.
When changing the NODE ADDRESS during operation, the unit status (MS) LED flashes in red and the unit communicates to the NODE ADDRESS before the change.

(E.g.)



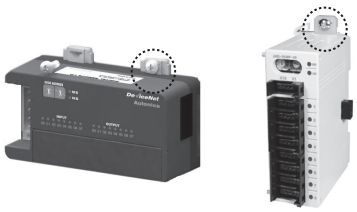
X10 X1

The X10 and X1 switches point both at "3", so the address is "33".

◎ Unit Installation

• Mounting on panel

① Pull rail locks (standard terminal block type: 3, sensor connector type: 2) on the rear part of a unit, there are fixing bolt hole.
② Place the unit on a panel to be mounted.
③ Make holes on fixing bolt positions.
④ Fasten the bolt to fix the unit tightly.
Tightening torque should be below 0.5N·m.



• Mounting on DIN rail

① Pull rail locks (standard terminal block type: 3, sensor connector type: 2) on the rear part of unit.
② Place the unit on DIN rail to be mounted.
③ Press rail locks to fix the unit tightly.

• Connection of basic and expansion units (standard terminal block type)

① Turn OFF the power of a Basic unit.
② Place an expansion unit to be installed next to the basic unit.
③ Connect the cable of expansion unit to the connector of a basic unit.
④ Install a connected expansion units as the right figures.
⑤ Supply the power to the basic unit.
※Re-supply the power of a basic unit and it recognizes expansion units.

• Connection of basic and expansion units (sensor connector type)

① Turn OFF the power of the basic unit.
② Remove a cover of connector for extension with nippers, etc.
③ Connect connector input part of an expansion unit and connector output part of a basic unit with a connector which is enclosed with an expansion unit box.
④ Install a connected expansion units as the right figure.
⑤ Supply the power to the basic unit.
※Re-supply the power of a basic unit and it recognizes expansion units.

▣ Cautions during Use

1. Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents.
2. 24VDC power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.
3. Keep away from high voltage lines or power lines to prevent inductive noise.
   In case installing power line and input signal line closely, use line filter or varistor at power line and shielded wire at input signal line.
   Do not use near the equipment which generates strong magnetic force or high frequency noise.
4. Do not connect or disconnect the expansion unit when power is being supplied.
5. This unit may be used in the following environments.
   ①Indoors (in the environment condition rated in 'Specifications')
   ②Altitude max. 2,000m
   ③Pollution degree 2
   ④Installation category II
