■ Dot for Decimal Point / Hour. Min. Second

※Run mode: hold the **RESET** key for over 3 sec, and it enters setting mode [dP].

※Setting mode: hold the **RESET** key for over 3 sec, and it saves the setting and returns to RUN mode.

If there is no **RESET** key input for 60 sec when entering setting mode, it returns to RUN mode.

● Changing the decimal point

※It returns to RUN mode if no **RESET** key or digital switch is applied for 60 sec in decimal point setting status.

■ Proper Usage

- Follow instructions in 'Proper Usage'. Otherwise, it may cause unexpected accidents.
- 24-48VDC, 24VAC power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.
- Use the product, 0.1 sec after supplying power.
- When supplying or turning off the power, use a switch or etc. to avoid chattering.
- Install a power switch or circuit breaker in the easily accessible place for supplying or disconnecting the power.
- In case of contact input, set count speed to low speed mode (1cps or 30cps) to operate.
If set to high speed mode (2kcps or 5kcps), counting error occurs due to chattering.
- Keep away from high voltage lines or power lines to prevent inductive noise.
In case installing power line and input signal line closely, use line filter or varistor at power line and shielded wire at input signal line.
Do not use near the equipment which generates strong magnetic force or high frequency noise.
- This product may be used in the following environments.
 - ①Indoors (in the environment condition rated in 'Specifications')
 - ②Altitude max. 2,000m
 - ③Pollution degree 2
 - ④Installation category II
