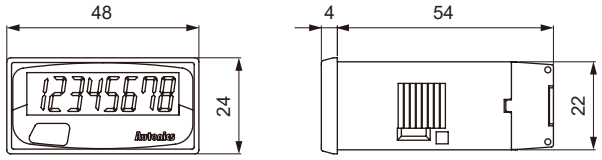
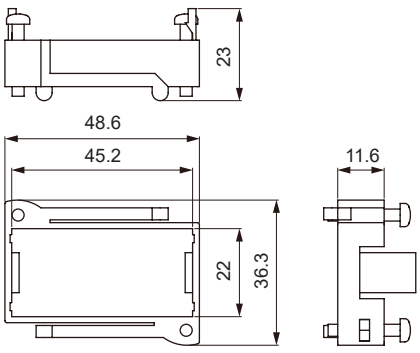
▣ Dimensions

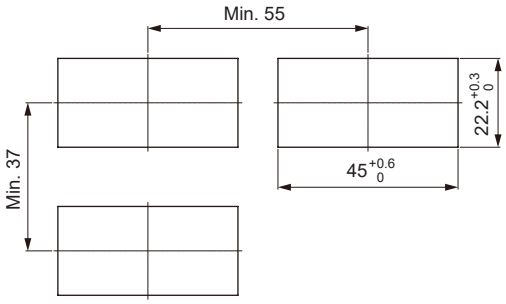
(unit: mm)



◎ Bracket



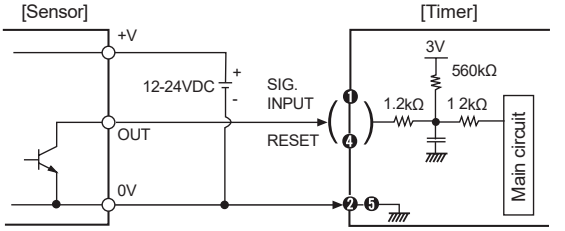
◎ Panel cut-out



▣ Input Connections

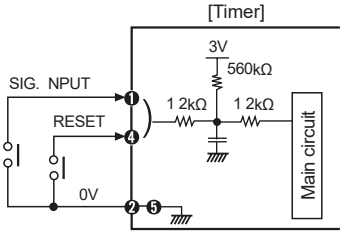
◎ No-voltage input (standard sensor: NPN open collector output type)

● Solid-state input



※When power is applied to terminal No ❶ and ❹, input terminal circuit can be broken and a malfunction can occur. (NPN output, PNP output, PNP open collector output type sensor cannot be used.)

● Contact input



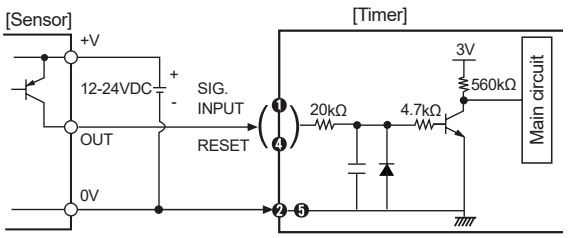
※Please use reliable contacts enough to flow 3VDC 5μA of current.

※❷ and ❺ are connected inside.

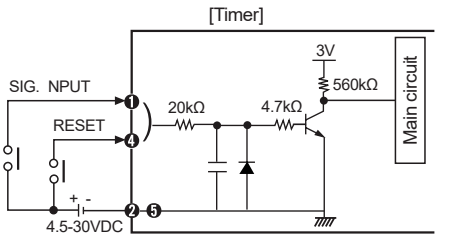
※For backlight function model, the input terminals are ❶, ❸ and the GND terminal is ❷.

◎ Voltage input (standard sensor: PNP open collector output type)

● Solid-state input



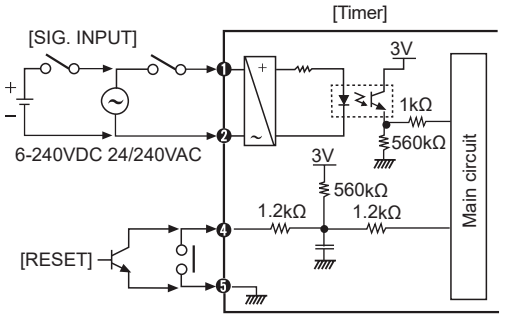
● Contact input



※Use reliable contacts enough to flow 3VDC 5μA of current.

※For backlight function model, the input terminals are ❶, ❸ and the GND terminal is ❷.

◎ Free voltage input



※AC type proximity sensor cannot be used as the source of input signals.

※Input terminal (❶, ❷) and reset terminal (❹, ❺) are insulated inside.

※It is not poss ble to reset with AC power or DC power.

※When relay contact is used as the source of RESET signal, please use reliable contacts enough to flow 3VDC 5μA of current.

◎ Input from AC type proximity sensor

In case of free voltage input type, do not connect AC proximity sensors instead of a switch as shown in the figure 1.
It may cause malfunction due to sensor's leakage current. Connect a relay as shown in the figure 2.
