※1: Use the transducer. This specification is based on the transducer with 0-10VDC output. When the output of transducer is DC4-20mA or 1-5VDC, please use the scaling meter.

※2: Use the tachogenerator. This specification is based on the tachogenerator with 0-10VDC or 0-10VAC output.

※When "1999" or "1999" is flashes with a certain measurement input, disconnect power supply and then check the cables.

### Connections

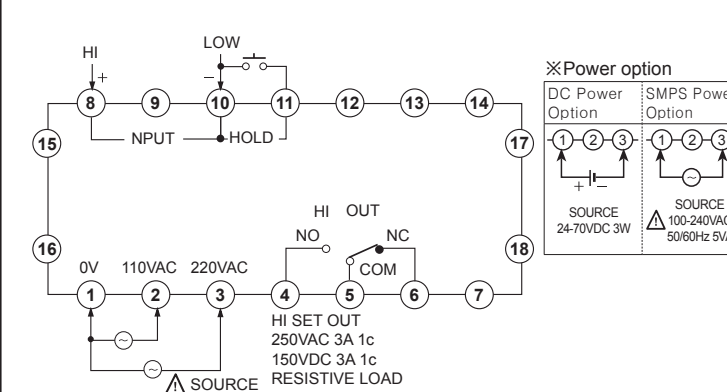

※Use terminals of size specified below.

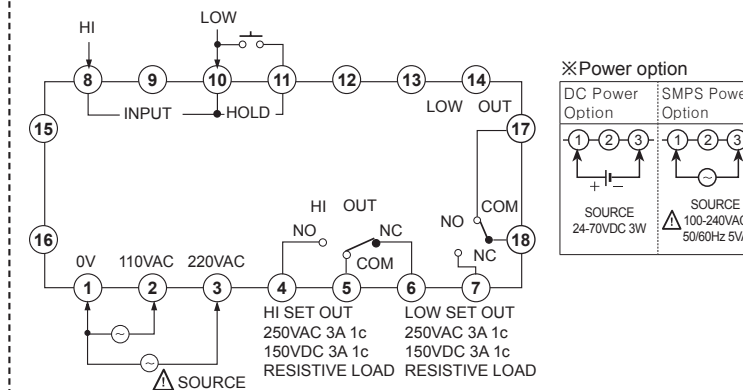

#### M4M

#### M4M1P

#### M4M2P

### Connections of Applications

#### Simultaneous connection of voltmeter and ammeter

##### For DC power supply

**DC power supply 1 DC power supply 2**  
※1: Compared to measurement input range, higher measuring voltage needs a multiplier and lower measuring voltage needs a shunt.

※When using voltmeter and ammeter simultaneously, connect the separated power supply each.

※(-) terminal of the power and (-) terminal of measurement input are shorted.

##### For AC power supply

※1: When measuring higher current than measurement input, use a shunt for DC current and a current transformer (CT) for AC current.

### Cautions during Use

- Follow instructions in 'Cautions during Use'. Otherwise, it may cause unexpected accidents.
- Install a power switch or circuit breaker in the easily accessible place for supplying or disconnecting the power.
- Keep away from high voltage lines or power lines to prevent inductive noise. In case installing power line and input signal line closely, use line filter or varistor at power line and shielded wire at input signal line. Do not use near the equipment which generates strong magnetic force or high frequency noise.

- This unit may be used in the following environments.
  - Indoors (in the environment condition rated in 'Specifications')
  - Altitude max. 2,000m
  - Pollution degree 2
  - Installation category II
