Remarks

EMC: Surge resistance
 External protection circuit is required. Document 825345, Section 2.
 The switching distance depends on the magnet used. Switching distances of >20 mm can be achieved.
 The sensor is functional again after the overload has been eliminated.
 For more information about MTTF and B10d see MTTF / B10d Certificate

Indication of the MTTF- / B10d value does not represent a binding composition and/or life expectancy assurance; these are simply experiential values with no warranty implications. These declared values also do not extend the expiration period for defect claims or affect it in any way.
