Simplifying Performance with Serious Engineering

BURNDY® HYSEAL integrated, all-in-one design ushers in a new era of medium voltage cable termination with reliability, efficiency, safety and performance.

Built-in Endseal Mastic (01)

Installed at both ends of the termination, high-performance mastic is applied at the top and bottom of the installation to help streamline installation and operation.

HYZINC Stress-Grading Mastic (02)

Greater surface coverage of our proprietary Zinc-Oxide (ZnO) formulation fills voids between the rubber body and cable substrate to deliver exceptional discharge and impulse performance. This helps mitigate issues surrounding poor cable prep - the most common cause of cable failures.

Durable Silicone Rubber Body (03)

The BURNDY® HYSEAL body is tough enough for any industrial or utility environment. Engineered to be both UV-resistant and hydrophobic, the body helps prevent moisture and airborne contaminant accululation to maintain surface resistivity and resist current leakage.

Silicone Cold Shrink Jacket (04)

Protecting the system for indoor or outdoor work, the HYSEAL silicone cold shrink jacket means reliable system installation without the skilled manpower demands or risk that comes with applied heat - not to mention the hot-work permits.

Single Spiral Ripcord (05)

Anyone can install the HYSEAL Medium Voltage Cable Termination. One reason? The system features an enhanced spiral ripcord design using smooth edges that make unwinding during the installation much easier on all types of cable. The ripcord pulls in seconds, securing the unit for solid, stable installation no matter what the operating environment.

HYZINC: The Key to Superior Stress Management

HYSEAL is the only medium voltage cable termination that uses HYZINC - a proprietary Zinc-Oxide (ZnO) silicone technology that controls electrical stress more efficiently and delivers smoother potential distribution. HYZINC is a stress-grading mastic that is applied at the semi-conductive cut-back area (in direct contact with the semi-conductive shield). Its non-linear, resistive-field grading design is based on ZnO microvaristors that can be "tuned" to a certain switching voltage. It's made by mixing ZnO particles with an inert carrier to make a "flowable" material with the ZnO electrical properities. The result? Potential distribution that's more linear for better overall system performance.

TYPE HSIC-FR

Heavy Wall Heat Shrinkable End Cap

UL Listed to 600V

Type HSIC-FR, Heat Shrink Insulating End Cap Fire Retardant is a heavy wall, fire retardant end cap made of cross-linked thermally stabilized black polyolefin. Used to insulate exposed conductors in energized applications. The 3:1 shrink ratio offers greater range, accommodating copper wire sizes, #8 AWG thru 2500+ kcmil. Performs effectively over lead, aluminum, steel, polyethylene, EPR, and PVC jacketed materials. Blue thermal chromatic lines disappear indicating correct installation temperature and provide inspectability. I.D. adhesive provides superior moisture and weather resistant characteristics.

Features and Benefits

- Minimum 28 Oxygen index, UL94 V-O Rated with self-extinguishing flame retardant properties
- 3:1 Shrink Ratio; minimum inventory required
- Thermal chromatic lines indicate proper installation
- Low shrink temperature, 150°C, only requires common hot air gun to apply
- Meets sealing requirements for ANSI-C119.1, UL486D
- Weather and moisture resistant

1. Slide the HSIC-FR end cap onto the cable and hold in place using forefinger or thumb.

2. Beginning at closed end apply heat, blue thermochromatic lines will begin to disappear at 150° C. Gradually, move heat source to open end and around cap. Once lines are no longer visible and adhesive flows out of open end, discontinue heating.

3. HSIC-FR end cap installed on cable.
