Note Regarding DB Resistor Duty Cycles

E-Stop - sized to absorb 6 times the motor inertia, 1800 rpm and three quick stops in rapid succession

10% - 10% continuous regeneration (of specific HP) OR 10% duty cycle with 10 seconds max on time - which ever is worst case

25% - 25% continuous regeneration (of specific HP) OR 25% duty cycle with 30 seconds max on time - which ever is worst case

33% - 33% continuous regeneration (of specific HP) OR 40% duty cycle with 40 seconds max on time - which ever is worst case

The DC Dynamic braking components have been sized for occasional non-repeated use, assuming load inertia is equal to or less than motor inertia. The Dynamic resistor will be sized at approximately 150% of rated motor current. The DC drive will also require a DB contactor option for dynamic braking action.

Note: NEMA 1 Enclosure is Galvanized Steel. DB resistors are shipped loose for mounting at least twelve inches from drive enclosure.
