Epsilon EP

"Motion Made Easy"[™]

230V Servo Drive Systems

**CONTROL
TECHNIQUES**

www.controltechniques.com

Epsilon EP is *"Motion Made Easy"*

Epsilon EP, the compact and easy to use servo drive, is scalable from a simple amplifier to a completely programmable 1.5 Axis motion controller. The Epsilon EP comes in three flexible models, and five drive sizes — 2.2A, 4.0A, 6.5A, 9.0A and 16.0A, able to deliver over 40Nm of torque at the rated motor speed.

New features and benefits

Listening to their motion control customers, the engineers at Control Techniques have incorporated several advanced features and capabilities in the Epsilon EP family to make these drives more powerful and easier to use.

Real-Time Programs

A Real-Time Program (RTP) is a user program that executes in a set number of servo update periods. RTPs allow for synchronous execution of external I/O updates, communications routines, or external PI control loops. They even can be used for creating motion profile modifications while the application is running.

Camming

Programming electronic camming has taken a huge step forward with Control Techniques's easy-to-use camming function, which can execute a variety of cam profiles without a single line of program code. For advanced capabilities, user programs can access a wealth of cam information for unprecedented flexibility. Cam motion can be dynamically monitored and easily modified on-the-fly.

Modbus Master

Modbus Master creates a whole new level of machine control capability. No longer limited to the drive's on-board I/O, the Modbus Master can manage a very large number of I/O and communicate updates to any Modbus slave device, giving machine builders extensive control options.

Position Tracker™

Analog Position Control and Fieldbus Position Control allow the Epsilon EP to replace an expensive PLC motion control module with a simple, low-cost analog signal or fieldbus register. With Position Tracker™, the closed loop feature of the position controller has been brought into the drive itself. The user simply sends the drive an analog or fieldbus signal that is proportional to the absolute motor/actuator position. Advanced features, including Teach functions, speed the set up.

Timers

Built-in Timers provide a simple and accurate way to trigger an action based on a previously initiated time delay. Select from up to seven different Timer types to match your needs.

Ethernet programming

The EP-P drive uses common Ethernet protocols for all levels of networking – To setup and monitor your application, communicate to PLC's via EtherNet/IP, or connect to an operator panel using Modbus TCP/IP.

*RoHS-compliant models available.

Choose your "Motion Made Easy"™ solution

Three functional configurations

Base: Epsilon EP-B

This base drive is ideal for servo applications utilizing an external motion controller. It accepts an analog command signal and sends out position feedback. The EP-B has the unique capability of combining an analog command with a preset velocity for trimming or advance/retard operations. The EP-B drive is an excellent choice for stepper replacements or centralized control systems.

Indexer: Epsilon EP-I or EP-IDN

The EP-I drive is a highly capable position controller that provides Home, Index, and Jog motion profiles. The EP-I holds up to 16 unique indexes that also can be chained together to create complex motion profiles. The EP-I has a unique alternate mode feature whereby it can perform an Index or Home function, and then switch to an alternate mode such as analog torque, analog velocity, or pulse follower mode on the fly! This compact indexing drive is a cost-effective solution for countless applications.

Programming: Epsilon EP-P, EP-PDN and EP-PPB

The EP-P drive provides the highest level of control by allowing the user to create complete user programs to sequence the motion control along with other machine functionality. The EP-P can be used to solve the most complex motion applications and still be easy-to-use because of the PowerTools Pro configuration software. PowerTools Pro uses simple drag-and-drop and fill in the blank screens that make setup a snap. User programs are created using a text based motion language that is as easy to read as it is to program. If you don't know the command, just drag it in from the drop down box and PowerTools Pro will assist you with the syntax. With intuitive software and plenty of online help, programming this servo drive is easy; in fact it is

PowerTools Pro, the power behind “Motion Made Easy”™

Our free PowerTools Pro software enables you to fully realize the power of the Epsilon EP servo systems. A familiar Microsoft® Windows™ interface provides operators and machine builders with the tools needed to access everything they need for complete servo control — Motion Profile Setup, User Units, Motor Auto-tune, Electronic Gearing, Network Configuration, and many other advanced features.

Developing applications with PowerTools Pro is an easy process that quickly gets your applications running. The process is completed “top down” from the Windows™ Explorer-like Hierarchy View—Setup, I/O Setup, Motion, Programs and Network. Some tasks may not need to be completed, as some applications, such as a “flying cutoff” neither require “programming” nor network parameters to operate.

Camming made easy!

Cam data is easily entered within PowerTools Pro, and the Cam graphing tool is second to none, with multiple interpolation types available.

Expandable Hierarchy View

The screenshot displays the PowerTools Pro software interface. On the left is the **Expandable Hierarchy View**, which organizes the software's settings into a tree structure. Key sections include:

- Axis 1**: Status, Graph, Setup, Devices, I/O Setup, Assignments, Selector, Input Lines, Output Lines, Analog Inputs, Analog Outputs.
- Motion**: Jog, Homes, Indexes (Index0 through Index7).
- Gearing**: Camming, CamTable0.
- Profiles**: All Programs.
- Network**: Modbus RTU/TCP, DeviceNet, Ethernet, Email, HTTP.

On the right, three configuration windows are shown, with red arrows indicating their connection to the hierarchy:

- Assignments Window**: Shows a table for assigning machine functions to digital inputs and outputs. It includes columns for Source, Assigned, Destination, and Set Point.
- Index Calculations Window**: Displays parameters for index calculations, including Index Number, Index Name, Index Type, and various distance and velocity settings. It also includes a graph of Velocity (inches/sec) vs. Time (seconds).
- Network Configuration Window**: Shows settings for network communication, including Word Swap, Block Size, and a list of allocated words.

Assignments – Use our “Virtual Wiring” to create programs right out of the box, without writing a single “line of code.” For example, on the assignment screen simply drag-and-drop the desired machine function onto the digital inputs and outputs.

Indexes – Setting up indexes is easily accomplished by filling in the screen’s blanks to create an index profile. Select from Incremental, Absolute, Registration, or Rotary Plus and Minus types. Choose the time base of the index by selecting either real time or synchronized to a master.

Network – EtherNet/IP and Modbus TCP/IP are standard with the Epsilon EPP, and DeviceNet and Profibus models are available. PowerTools Pro makes setting up a network simple with features such as drag-and-drop and fill-in-the-blank data setup, word swap, and the ability to easily view and adjust system performance levels with real-time monitoring and diagnostic tools.

Motors to complete a “Motion Made Easy”™ servo system

To complete a “Motion Made Easy”™ servo system, Control Techniques offers matched motor solutions and accessories, which give an unparalleled “plug and play” experience to users. The Epsilon EP works flawlessly with almost any motor to fit a wide range of motion control needs. Motor sizing is a snap with the free downloadable program, *CTSize*. A full menu of actuators and gear reducers are available through the Control Techniques “One Source” program.

FM Servo Motor

- Highly configurable motor line
- Continuous torque ranges from 6.6 lb-in (0.75 Nm) to 646 lb-in (73 Nm)
- Rated speeds from 2000 to 6000 rpm
- Frame sizes 55, 75, 95, 115, 142, 190mm (IEC mounting)
- Configurable shaft diameters and inertia offerings
- IP65 rating, UL and CE compliant
- 4096 line count encoder

NT Servo Motor

- Rugged motor is designed for your most stringent servo application
- Continuous torque ranges from 7 lb-in (0.79 Nm) to 55 lb-in (6.3 Nm)
- Low Inertia
- Rated speeds from 3000 to 5000 rpm
- Frame sizes in English (NEMA 23 or 34) or Metric (IEC-72-1)
- Custom configurations upon request
- IP65 rating, UL and CE compliant
- 2048 line count encoder

Download detailed motor information including specifications and dimensional drawings from www.controltechniques.com.

The Epsilon EP is the perfect solution for a multitude of applications such as:

- Rotary Knife
- Flying Shear
- Pick and Place machines
- Vertical or Horizontal cartoners
- Traverse Winders
- Form-Fill-Sealers
- Packaging systems
- Conveyor controls
- High speed labeling
- Random Infeed – Smart belt.
- Phase Synchronization
- Extend-Retract
- Gluing Applications
- Auger Filler with analog weight check
- Semiconductor wet bath
- Dancer Arm Loop control
- Extruders

Note: Application tools are available on-line at www.emersonct.com as pre-configured solutions to many common motion control applications.

EP209 / EP216 all models	3.40 [86.3]	1.03 [26.1]	5.5 lb [2.49]

Power Requirements

- AC Input Voltage, 47-63 Hz
EP 202/204/206: 1Ø, 20 to 264 VAC
EP 209/216: 1Ø / 3Ø, 90 to 264 VAC
(240 VAC for rated performance) SCCR 10kA
- DC Input Voltage
EP 202/204/206: 10-340 VDC
EP 209/216: 140-340VDC
- AC Input Current (max. continuous)
EP-202: 5.0Arms (140A for 2ms inrush)
EP-204: 8.5Arms (140A for 2ms inrush)
EP-206: 12.0Arms (140A for 2ms inrush)
EP-209: 18Arms (34A for 5ms inrush)
EP-216: 36Arms (34A for 5ms inrush)
- Output Current Continuous (rms) / Peak (4 sec.)
EP-202: 2.2A / 4.4A
EP-204: 4.0A / 8A
EP-206: 6.5A / 13A
EP-209: 9.0 A / 18A
EP-216: 16.0A / 32A
- Continuous Output Power
EP-202: 0.67kW
EP-204: 1.14kW
EP-206: 1.61kW
EP-209: 2.2kW
EP-216: 3.8kW
- Switching Frequency 10 kHz
External Logic Supply +18 to 30 VDC @ 0.5A
Encoder Supply Output +5 VDC, 250 mA
I/O Supply +10 to 30 VDC
System Efficiency 93%
Cooling Method Convection

Regeneration

- Internal Energy Absorption (115V / 230V)
EP-202: 39 Joules / 8 Joules
EP-204: 58 Joules / 12 Joules
EP-206: 97 Joules / 20 Joules
EP-209: 117 Joules / 24 Joules
EP-216: 132 Joules / 28 Joules
- External: Connection to external resistor,
33 Ohm min, 15 Arms, 2kW
- Drive Control Inputs
- Analog: (1) +/-10VDC, 14 bit, 100kOhm, Differential
Analog Max. Input Rating: Differential +/-14 VDC, Each Input with Reference to Analog Ground +/-14VDC
- Digital: (16) (5 on EP-B) +10 to 30 VDC, 2.8kOhm, Sourcing, Optically Isolated
- Pulse: (1) Differential RS-422, 1MHz/Channel, 50% Duty Cycle
- Single Ended: (1) TTL Schmitt Trigger 500kHz/ Channel, 50% Duty Cycle
- Motor Overtemperature: 0 to +5VDC, 10kOhm, single ended

Drive Control Outputs

- Analog: (2) +/-10VDC, 10 bit, Single-ended 20mA
- Digital: (8) (3 on EP-B) +10 to 30VDC, 150mA, Sourcing Optically Isolated
- Pulse: Differential RS-422 and TTL compatible, 20mA/Channel Sink or Source

Environmental

- Rated Ambient Temperature: 32° to 104°F (0° to 40°C) for rated performance
- Maximum Ambient Temperature: 32° to 122°F (0° to 50°C) with power derating of 3.0%/1.8F (1°C) above 104°F (40°C)
- Rated Altitude: 3280' (1000m)
- Maximum Altitude: For altitudes >3280' (1000m) derate output by 1%/328' (100m)
- Vibration: 10 to 2000 Hz @ 2g
- Humidity: 10 to 95% non-condensing
- Storage Temperature: -13° to 167°F (-25° to 75°C)
- Ingress Protection: IP-20

Serial Interface

- 2 RS-485 connectors for multi-drop applications Modbus RTU w/ 32-bit extension, 9600 to 19.2 kBaud

Ethernet Interface (EP-P only)

- 1 RJ-45, Modbus TCP/IP or EtherNet/IP

DeviceNet (EP-xDN models only)

- Power Consumption: 25mA
Baud Rates: 125, 250 and 500kps
Node Addresses: 00-63

Profibus-DP (EP-PPB model only)

- Baud: 1.5 to 12Mb
Address Range: 00-126
