## Power Defense Molded Case Circuit Breakers-Frame Size 1

## Product Description

Frame Size 1 covers a range of 15 A through 125 A with fixed-fixed thermal-magnetic trip units. PD-1 is available in 1-, 2-, 3- and 4-pole configurations, with the 4-pole configuration available with no protection on the neutral pole, or fully protected.

## Application Description

Frame Size 1 can be used to meet a wide range of circuit protection and power distribution needs, including current limiting applications. PD-1 is a cable-in / cable-out MCCB.

## Features and Benefits

Frame Size 1 breakers are available in multiple ratings from 15 A through 125 A. They are of a modular design with field installable accessories and terminals, which may also be factory installed.

## Standards and Certifications

Power Defense breakers are designed and tested to meet stringent requirements for:

- UL
- CSA
- IEC (CE)
- CB (CCC)

| $15-125 \mathrm{~A}$ | 12 | GCWTK |

Note: Control wire tabs can be installed with terminals listed above.

## Accessories

Internal Accessory Configurations—Frame Size 1 (
3- and 4-Pole Circuit Breakers

## Alarm and Auxiliary Switches

Alarm and auxiliary switches are plug-and-play accessories designed to be field installable. However, Eaton also offers the service of field installation in our factories.

Breaker catalog numbers with alarm and auxiliary switch combinations require a complete 20-digit catalog number, adding the alarm and auxiliary switch functionality in digits 15-16 and adhering to the following conditions and tables:

- Digit 15 denotes the type of accessory(-ies) installed and the terminal types
- Digit 16 denotes number of switches installed
- If no other accessories are selected, use NNNN for the final 4 digits of the catalog number

Alarm and Auxiliary Switch — Field Installation Kits (2)

## Power Defense Molded Case Circuit Breakers-Frame Size 2

## Product Description

Frame Size 2 covers a range of 15 A through 225 A with a complete offering of trip units, including PXR electronic trip units and fixed-fixed thermalmagnetic trip units.

## Application Description

Frame Size 2 can be used to meet a wide range of circuit protection and power distribution needs, including ground fault protection and current limiting options. PXR trip units in PD-2 provide all levels of protection, including energy metering with multiple communication schemes, breaker health indication, and zone selective interlocking with visual indication.

## Features and Benefits

Frame Size 2 breakers are available in multiple ratings from 15 A through 225 A. They are configured with a trip unit from the factory. Accessories are modular in design to allow for field installation or factory configuration. PXR trip units are available with advanced features to provide customers unparalleled situational awareness of their electrical system.

## Standards and Certifications

Power Defense breakers are designed and tested to meet stringent requirements for:

- UL
- CSA
- IEC (CE)
- CB (CCC)

C $\epsilon$

## Catalog Number / Product Selection

## Power Defense—Frame Size 2 (15-225 A)

Frame Size 2 covers a range of 15 A through 225 A using electronic trip units or thermal-magnetic trip units. It is available in configurations of single-pole, 2-pole, 3-pole and 4-pole.

Interrupting Ratings (2-, 3- and 4-Pole)

## Notes

(1) UL current limiting for 3-and 4-pole breakers.
(2) DC ratings available in thermal-magnetic breakers only. 250 Vdc is achieved using 2-poles in series.
${ }^{(3)}$ First rating listed is for thermal-magnetic breakers, second rating is for breakers with PXR electronic trip units.

## Description of PXR Configured Options

Relays (1)-Form A contacts (rated for $240 \mathrm{Vac}, 1$ A)

- 2 available if Modbus RTU is not used; 1 available when used in conjunction with Modbus RTU
- Interface: 3 wires (ALM1, ALM2, ALM Common)
- Programmable to indicate breaker conditions
- Available as field-installable option if not pre-configured (catalog number PDG2XRELAYS) (2)

Modbus ©—Modbus RTU
directly from breaker

- Interface: 3 wires (MODBA, MODBB, MODBG)
- No additional modules required
- Available as field-installable option if not pre-configured (catalog number PDG2XMODRTUREL) (2)

## ZSI—Zone Selective

 Interlocking- Includes ability to turn ON and OFF
- Interface: 3 wires (Zin, Zout, Zcomm)
- No additional modules required

CAM - CAM Link Connection (requires a CAM module per breaker)

- Interface: 5 wires (refer to CAM IL for details)
- Communications Adapter Modules available for Modbus TCP and PROFIBUS

## Auxiliary Power

- Connection included with all PXR 20, 20D and 25 trip units
- Required for communications, relays and metering accuracy
- $24 \mathrm{Vdc}, 0.5 \mathrm{~A}$
- Interface: 2 wires (Aux + 24 V , Aux 0 V)

Available Continuous Current ( $I_{r}$ ) Settings on PXR Electronic Trip Units

| Option | Setting | Catalog Number Selection and Maximum Setting ( $\mathrm{In}_{\mathrm{n}}$ ) |  |  |  |

| PXR 20D, PXR 25 |  | Programmable from minimum to maximum values in 1 A increments. |  |  |  |

## Notes

(1) Relays and/or Modbus RTU in PD-2 uses accessory pocket, therefore UVR and shunt trip use is not possible.
(2) PD-2 can only be equipped with one field-installable communication option (PDG2XMODRTUREL or PDG2XRELAYS).

Power Defense Molded Case Circuit Breakers

## Terminals—Frame Size 2

Catalog numbers shown are for a single side of a 3-pole breaker.
For 2- and 4-pole options, replace the X3 with X2 or $\mathbf{X 4}$, respectively.
Example: PDG2X3T100 becomes PDG2X2T100 for 2-pole
Terminal Types

Note: Wire capacity is based on standard imperial wire sizes; metric sizes provided in table are a direct conversion to demonstrate maximum capacity, not to denote metric wire sizes.

## Notes

(1) The "Breaker Frame" column provides information on the ampere ratings for which the terminal may be used (field installation); in some cases the range is limited by proper fit of the terminal onto the breaker conductor.
The column "Standard on Amperes" provides information on what terminal is used during factory configuration per Digit 14 of the breaker catalog number. The two may not match.
${ }^{(2)}$ Factory standard terminals and non-aluminum terminals for 100 A and below are the same terminals.
(3) PDF2 225 A breakers with Digit 14 designation of "J" are equipped with PDG2X3TA225K terminals. PDF2 150 A breakers with Digit 14 designation of "J" are equipped with PDG2X3TA225 terminals.
${ }^{4}$ Breaker loses UL when fitted with rear-fed terminals or rear connectors.

## Electronic Circuit Breakers

## 4-Pole Circuit Breakers

## Notes

(1) 2-pole PD-2 breakers have an accessory pocket compatible with indicating accessory options only.
(2) Single-pole PD-2 breakers may be equipped with a Form C bell alarm as a factory installation only. Use "BC" as a suffix code in digits 15-16.
(3) Qty: $11 \mathrm{NO} / 1 \mathrm{NC}($ Form C) auxiliary contact is automatically factory installed for all Frame 2 Power Defense breakers with electronic trip units.

Power Defense Molded Case Circuit Breakers

## Alarm and Auxiliary Contact Blocks-Frame Size 2

Power Defense breakers have designated positions for alarm and auxiliary switches in the right-pole accessory cavity. For Frame 2, the two left-most positions are used for alarm switches, and the two right-most locations are used for auxiliary switches.

Power Defense breakers have secondary covers for ease of field installation of accessories, including alarm and auxiliary switches.

Power Defense alarm and auxiliary switches are available in contact blocks, in Form A (NO), Form B (NC) and Form C (NO-NC) types. Form A and Form B contacts take one position in the breaker accessory cavity, and Form C contacts take two positions in the cavity. Identical contact blocks are used for the alarm and auxiliary switch functions.

Frame 2 breakers with electronic trip units are automatically configured with a factory-installed Form C auxiliary contact block because the right-pole accessory cavity is not available for field modification. Trip position can also be communicated via communications and the PXR programmable relays.

Pigtail (29 in / 0.75 m ) Contact Blocks for Alarm and Auxiliary Switch Functionality

| Termination | 0.75 m pigtail | 3.0 m pigtail |

Note
(1) Frame 2 breakers with electronic trip units do not allow access to the right accessory pocket but are automatically configured with a factory installed Form C / NO-NC auxiliary switch.
These alarm switches can be field or factory installed in the left accessory pocket in place of a shunt trip or UVR.

## Factory Installation of Alarm and Auxiliary Switches-Frame Size 2

Alarm and auxiliary switches are plug-and-play accessories designed to be field installable. However, Eaton also offers installation service in our factories.
Breaker catalog numbers with alarm and auxiliary switch combinations require a complete 20-digit catalog number, adding the alarm and auxiliary switch functionality in digits 15-16 and adhering to the following conditions and tables:

- Digit 15 denotes the type of accessory(-ies) installed and the terminal types
- Switches may be requested for alarm only, auxiliary only or a combination of the two
- Digit 16 denotes the number and type (NO, NC) of switches installed
- For Eaton factory installation, the same type of terminals (i.e. all pigtail 0.75 m , all screw, etc.) and same style of contact block (i.e., all 1NO/1NC, all 2NC, etc.) must be used in a factory configuration
- If no other accessories are selected, use NNNN for the final 4 digits of the catalog number
- Frame 2 breakers with electronic trip units do not allow access to the right accessory pocket but are automatically configured with a factory installed 1NO/1NC auxiliary switch. A bell alarm accessory is available for separate installation in the left accessory pocket.

## Note

(1) $1 \mathrm{NO} / 1 \mathrm{NC}(\mathrm{AC})$ is always included in breakers with PXR trip units;
no selection or selection of NN in Digits 15-16 will result in AC.

## Factory Installed Tripping Accessories—Frame Size 2

Shunt trips and under voltage releases (UVRs) are plug-andplay accessories designed to be field installable. However, Eaton also offers the service of installation in our factories.

Breaker catalog numbers with shunt trips or UVRs require a complete 20-digit catalog number, adding the tripping accessory functionality in digits 17 and 18 and adhering to the following conditions and tables.

- Digit 17 denotes the type of accessory installed and the terminal type
- Digit 18 denotes the voltage of the accessory
- If no accessories are selected, use NNNN for the final 4 digits of the catalog number

## Shunt Trips

| Voltage | Screw Terminals | Pigtail (29 in / 0.75 m) | Pigtail (118 in / 3.0 m) |

## Power Defense Molded Case Circuit Breakers-Frame Size 3

## Product Description

Frame Size 3 covers a range of 45 A through 600 A with a complete offering of trip units, including PXR electronic trip units and fixedadjustable thermal-magnetic trip units. PD-3 is available in two versions, with 400 A and 600 A constructions to optimize performance in multiple applications.

## Application Description

Frame Size 3 can be used to meet a wide range of circuit protection and power distribution needs, including ground fault protection, current limiting, 100\% UL ratings, and high instantaneous settings for selective coordination. PXR trip units in PD-3 provide all levels of protection, including energy metering with multiple communication schemes, breaker health indication, and arc flash reduction options.

## Features and Benefits

Frame Size 3 breakers are modular and available as complete breakers from the factory, or as modular components, including frames, trip units, accessories and terminals to provide flexibility for customers. PXR trip units are available with advanced features to provide customers unparalleled situational awareness of their electrical system.

## Standards and Certifications

Power Defense breakers are designed and tested to meet stringent requirements for:

- UL
- CSA
- IEC (CE)
- CB (CCC)

Power Defense Molded Case Circuit Breakers

## Catalog Number / Product Selection

## Power Defense—Frame Size 3 (45-600 A)

Frame Size 3 covers a range of 45 A through 600 A using electronic trip units, and 100 A through 600 A using thermal-magnetic trip units. It is available in configurations of 2-pole, 3-pole and 4 -pole, with the 2 -pole being in the same physical size of a 3 -pole variant. Frame 3 has two unique constructions: one for 400 A and a second one for 600 A . The 600 A construction provides a unique capability to be used at 400 A and below in critical coordination applications where a high level fixed instantaneous is required. This is accomplished by using a letter $\mathbf{H}$ in the 7th digit of the catalog number, as shown below.

Interrupting Ratings

## Notes

(1) All PD-3 2-pole breakers are physically the same size as a 3-pole frame with the outer poles used for electrical connections.
${ }^{2}$ (2) Not available in 4 -pole $60 \%$ neutral protection.
(3) High override ( 600 A frame).
(4) Molded case switches may open above 4000 A for the 400 A frame, and above 6300 A for the 600 A frame.

KNS = Molded case switch
$\mathbf{N}=$ No terminals
$\mathbf{J}=$ Line and load terminals
$\mathbf{K}=$ Line only terminals
$\mathbf{L}=$ Load only terminals

## Molded Case Circuit Breakers with Power Xpert Release (PXR) Electronic Trip Units (ETU)

This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.
Molded Case Circuit Breakers with PXR ETU-Globally Rated

Molded Case Circuit Breakers with PXR ETU-Globally Rated (100\% UL Rated)

Note
(1) All PD-3 2-pole breakers are physically the same size as a 3-pole frame with the outer poles used for electrical connections.
(2) See PXR Trip Unit Options table on Page V4-T2-48 for protection type (\#(1)) and available configured options (\#(2)).

## Globally Rated Frame Only

PD-3 thermal-magnetic and electronic breakers may also be purchased as separate frames, trip units, terminals and accessories for field configuration of a final breaker. Each Frame Only device is marked with interrupting ratings and a maximum continuous current rating; each trip unit is also marked with a maximum continuous current rating, which must not exceed that of the frame. Additionally, 100\% UL Rated frames are marked as such on the Frame Only device.
Frame Only-Globally Rated

Frame Only-Globally Rated (100\% UL Rated)

Note
(1) All PD-3 2-pole breakers are physically the same size as a 3-pole frame with the outer poles used for electrical connections.

## Trip Units

PD-3 thermal-magnetic and electronic breakers may also be purchased as separate frames, trip units, terminals and accessories for field configuration of a final breaker. The 400 A frame must use trip units of ratings 0100-0400, while the 600 A frame must use trip units of ratings 0500,0600 or designated by H, such as H250. Additionally, for 2-pole breakers using electronic trip units, 3-pole trip units are used. PDG designated trip units are for use with PDG and PDF breaker frames. The $100 \%$ rating for PDF ( $100 \%$ UL Rated) is marked on the frame, not the trip unit.

## Trip Units Only

This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.

## Descriptions of PXR Configured Options

Relays- 2 Form A contacts (rated for $240 \mathrm{Vac}, 1$ A)

- Interface: 3 wires (ALM1, ALM2, ALM Common)
- Programmable to indicate breaker conditions
Modbus-Modbus RTU directly from breaker
- Interface: 3 wires (MODBA, MODBB, MODBG)
- No additional modules required

ZSI-Zone Selective

Interlocking

- Interface: 3 wires (Zin, Zout, Zcomm)
- Includes ability to turn ON and OFF, and indicate signals

CAM-CAM Link connection (requires a CAM module per breaker)

- Interface: 5 wires (refer to CAM IL for details)
- Communications Adapter Modules available for Modbus TCP and PROFIBUS

ARMS—Arcflash Reduction Maintenance System, or Maintenance Mode

- Available as trip unit Protection Type 4 or 5
- Interface: Switch and LED on face of trip unit (selfpowered) and two wires for remote switch enable option ( 24 Vdc required)
- A programmable relay will be factory defaulted to remote indication of ARMS

## Auxiliary Power

- Connection included with all PXR 20, 20D, and 25 trip units
- Required for communications, relays, and metering accuracy
- $24 \mathrm{Vdc}, 0.5 \mathrm{~A}$
- Interface: 2 wires Aux +24 V, Aux 0 V)

## Terminals—Frame Size 3

Catalog numbers shown are for a single side of a 3-pole breaker.
For 2- and 4-pole options, replace the $\mathbf{X 3}$ with $\mathbf{X 2}$ or $\mathbf{X 4}$, respectively.
Example: PDG3X3TA300 becomes PDG3X2TA300 for two-pole.

## Control Wire Tabs

| Use | Package <br> Oty. | Catalog <br> Number |
| :--- | :--- | :--- |
| $100-400 \mathrm{~A}$ | 12 | KCWTK |

Note
(1) Terminals not UL Listed.

## Accessories

## Internal Accessory Configurations—Frame Size 3

## 3-Pole Circuit Breakers

4-Pole Circuit Breakers

## Notes

(1) Frame 3 Power Defense breakers with electronic trip units AND communication only have access to one alarm space. Breakers with thermal-magnetic trip units or electronic trip units without communication have access to two alarm spaces.
(2) Neutral pole includes two additional auxiliary spaces.

## Alarm and Auxiliary Contact Blocks-Frame Size 3

Power Defense breakers have designated positions for alarm and auxiliary switches in the right pole accessory cavity. For Frame 3, the two left-most positions are used for alarm switches, and the two right-most locations are used for auxiliary switches.
Power Defense breakers have secondary covers for ease of field installation of accessories, including alarm and auxiliary switches.

Power Defense alarm and auxiliary switches are available in contact blocks, in Form A (NO), Form B (NC), and Form C (NO-NC) types. Form A and Form B contacts take one position in the breaker accessory cavity, and Form C contacts take two positions in the cavity. Identical contact blocks are used for the alarm and auxiliary switch functions.
Electronic breakers with communications options (Modbus RTU or CAM Link) lose one alarm switch position, but are also able to provide trip position via communications and the PXR programmable relays.

## Factory Installation of Alarm and Auxiliary Switches-Frame Size 3

Alarm and auxiliary switches are plug-and-play accessories designed to be field installable. However, Eaton also offers installation service in our factories.

Breaker catalog numbers with alarm and auxiliary switch combinations require a complete 20-digit catalog number, adding the alarm and
auxiliary switch functionality in digits 15-16 and adhering to the following conditions and tables:

- Digit 15 denotes the type of accessory(-ies) installed and the terminal types
- Switches may be requested for alarm only, auxiliary only or a combination of the two
- For Eaton factory
installation, the same type of terminals (i.e., all pigtail 0.75 m , all screw, etc.) must be used. If a combination of alarm and auxiliary switches is selected, they must be the same type (i.e., all 1NC, all 1NO/1NC, etc.)
- Digit 16 denotes number and type (NO, NC) of switches installed
- If no other accessories are selected, use NNNN for the final 4 digits of the catalog number
- Electronic breakers with communications lose one alarm switch position in order to provide trip status via communications. They do not lose an auxiliary position for this purpose.

Power Defense Molded Case Circuit Breakers

## Factory Installed Tripping Accessories—Frame Size 3

Shunt trips and undervoltage releases (UVRs) are plug-andplay accessories designed to be field installable. However, Eaton also offers the service of installation in our factories.

Breaker catalog numbers with shunt trips or UVRs require a complete 20-digit catalog number, adding the tripping accessory functionality in digits 17 and 18 and adhering to the following conditions and tables.

- Digit 17 denotes the type of accessory installed and the terminal type
- Digit 18 denotes the voltage of the accessory
- If no additional accessories are selected, use NN for digits 15-16 and 19-20 of the catalog number
- Each breaker has space for one shunt trip or UVR tripping accessory only

## Shunt Trips

## Dimensions and Weights-Frame Size 3

Approximate Dimensions in Inches (mm)

| Number of Poles | Width | Height | Depth |
| :--- | :--- | :--- | :--- |
| 2 | $5.47(138.9)$ | $10.13(257.1)$ | $4.30(109.1)$ |
| 3 | $5.47(138.9)$ | $10.13(257.1)$ | $4.30(109.1)$ |
| 4 | $7.22(182.9)$ | $10.13(257.1)$ | $4.30(109.1)$ |

Approximate Shipping Weight in lb (kg)

| Breaker Type | 2-Pole | 3-Pole | 4-Pole |
| :--- | :--- | :--- | :--- |
| PDG3 400 A | $8.05(3.65)$ | $11.02(5.0)$ | $13.77(6.25)$ |
| PDG3 600 A | $10.43(4.73)$ | $12.36(5.61)$ | $16.27(7.39)$ |

Notes
(1) Provision only. Kirk keylock sold separately. Bolt projection in withdrawn position is 0.375 in $(9.525 \mathrm{~mm})$ for F -lock and 0 in $(0 \mathrm{~mm})$ for FF -lock.
(2) Breaker must be ordered with walking beam interlock ready modification from plant (factory suffix WB in digits 19-20).
(3) Requires two breakers.
(4) PDG3 with 0400 or below rating ship from the factory with the 400 A frame terminal cover, but can be fitted with either in the field. 600 A frames, including H 250 , H 400 , etc ship with the standard terminal cover.

## Power Defense Molded Case Circuit Breakers-Frame Size 4

## Product Description

Frame Size 4 covers a range of 300 A through 800 A with a complete offering of trip units, including PXR electronic trip units and fixedadjustable thermal-magnetic trip units. PD-4 is available in a single 800 A frame.

## Application Description

Frame Size 4 can be used to meet a wide range of circuit protection and power distribution needs, including ground fault protection and 100\% UL ratings. PXR trip units in PD-4 provide all levels of protection, including energy metering with multiple communication schemes, breaker health indication and arc flash reduction options.

## Features and Benefits

Frame Size 4 breakers are modular and available as complete breakers from the factory or as modular components, including frames, trip units, accessories and terminals to provide flexibility for customers. PXR trip units are available with advanced features to provide customers unparalleled situational awareness of their electrical system.

## Standards and Certifications

Power Defense breakers are designed and tested to meet stringent requirements for:

- UL
- CSA
- IEC (CE)
- CB (CCC)

c $\epsilon$

## Catalog Number / Product Selection

## Power Defense—Frame Size 4 (300-800 A)

Frame Size 4 covers a range of 320 A through 800 A using electronic trip units, and 300 A through 800 A using thermal-magnetic trip units. It is available in configurations of 2-pole, 3-pole and 4-pole, with the 2-pole being in the same physical size of a 3-pole variant.

Interrupting Ratings

Molded Case Circuit Breakers with PXR ETU-Globally Rated

Molded Case Circuit Breakers with PXR ETU-Globally Rated (100\% UL Rated)

## Globally Rated Frame Only

PD-4 thermal-magnetic and electronic breakers may also be purchased as separate frames, trip units, terminals and accessories for field configuration of a final breaker. Each Frame Only device is marked with interrupting ratings and a maximum continuous current rating; each trip unit is also marked with a maximum continuous current rating, which must not exceed that of the frame. Additionally, 100\% UL Rated frames are marked as such on the Frame Only device.
This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.
Frame Only-Globally Rated

Note
(1) See tables and descriptions on Page V4-T2-61 for protection type ( $\left.\#_{(1)}\right)$ and available configured options $\left(\#_{(2)}\right)$.

Molded Case Circuit Breakers

Power Defense Molded Case Circuit Breakers

## Trip Units

PD-4 thermal-magnetic and electronic breakers may also be purchased as separate frames, trip units, terminals and accessories for field configuration of a final breaker.
For two-pole breakers using electronic trip units, three-pole trip units are used.
PDG designated trip units are for use with PDG and PDF breaker frames. The 100\% rating for PDF (100\% UL Rated) is marked on the frame, not the trip unit.

## Trip Units Only

This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.

Thermal-Magnetic Trip Units

## Power Xpert Release (PXR) Electronic Trip Units

Power Xpert Release (PXR) Electronic Trip Units

Notes
(1) Not available in 4-pole 60\% neutral protection.
(2) See tables and descriptions on Page V4-T2-61 for protection type (\#(1)) and available configured options (\#(2)).

## Descriptions of PXR Configured Options

Relays-2 Form A contacts (rated for 240 Vac, 1 A)

- Interface: 3 wires (ALM1, ALM2, ALM Common)
- Programmable to indicate breaker conditions
Modbus-Modbus RTU directly from breaker
- Interface: 3 wires (MODBA, MODBB, MODBG)
- No additional modules required

ZSI-Zone Selective Interlocking

- Interface: 3 wires (Zin, Zout, Zcomm)
- Includes ability to turn ON and OFF, and indicate signals
CAM-CAM Link connection (requires a CAM module per breaker)
- Interface: 5 wires (refer to CAM IL for details)
- Communications Adapter Modules available for Modbus TCP and PROFIBUS

ARMS—Arcflash Reduction Maintenance System, or Maintenance Mode

- Available as trip unit Protection Type 4 or 5
- Interface: Switch and LED on face of trip unit and two wires for remote switch enable option
( 24 Vdc required)
- A programmable relay will be factory defaulted to remote indication of ARMS

## Auxiliary Power

- Connection included with all PXR 20, 20D, and 25 trip units
- Required for communications, relays, and metering accuracy
- $24 \mathrm{Vdc}, 0.5 \mathrm{~A}$
- Interface: 2 wires (Aux +24 V, Aux 0 V)

Available Continuous Current ( $\mathrm{I}_{\mathrm{r}}$ ) Settings on PXR Electronic Trip Units

| Option | Setting | Catalog Number Selection and Maximum Setting ( $I_{\mathrm{n}}$ ) 800 A |
| :---: | :---: | :---: |
| PXR 10, PXR 20 | 1 | 320 A |
|  | 2 | 350 A |
|  | 3 | 400 A |
|  | 4 | 450 A |
|  | 5 | 500 A |
|  | 6 | 550 A |
|  | 7 | 600 A |
|  | 8 | 630 A |
|  | 9 | 700 A |
|  | $10=\ln$ | 800 A |
| PXR 20D, PXR 25 |  | Programmable from minimum to maximum values in 10 A increments. |

Power Defense Molded Case Circuit Breakers

## Terminals—Frame Size 4

Catalog numbers shown are for a single side of a 3-pole breaker.
For Frame Size 4, terminals are also available in single-pole kits; these are not available in 2-pole or 4-pole configurations, unless otherwise noted. For single terminals, replace $\mathbf{X 3}$ with $\mathbf{X 1}$ on the catalog number.
Example: PDG4X3TA800 becomes PDG4X1TA800 for a single unit.
Terminal Types

| 800 | - | - | - | - | - | - | PDG4X3TS800 ${ }^{\text {(1) }}$ | - | S | D | E | 300-800 |

## Notes

Wire capacity is based on standard imperial wire sizes; metric sizes provided in table are a direct
conversion to demonstrate maximum capacity, not to denote metric wire sizes.
(1) End cap kits are available in 3-pole and 4-pole configurations only. For 4-pole, use catalog number PDG4X4TS800.

## Accessories

## Internal Accessory Configurations-Frame Size 4

3-Pole Circuit Breakers

## 4-Pole Circuit Breakers

## Note

(1) Frame 4 Power Defense breakers with electronic trip units and communication only have access to one alarm space. Breakers with thermal-magnetic trip units or electronic trip units without communication, have access to two alarm spaces.

## Alarm and Auxiliary Contact Blocks-Frame Size 4

Power Defense breakers have designated positions for alarm and auxiliary switches in the right pole accessory cavity. For Frame 4, the two left-most positions are used for alarm switches, and the two right-most locations are used for auxiliary switches.
Power Defense breakers have secondary covers for ease of field installation of accessories, including alarm and auxiliary switches.

Power Defense alarm and auxiliary switches are available in contact blocks, in Form A (NO), Form B (NC), and Form C (NO-NC) types. Form A and Form B contacts take one position in the breaker accessory cavity, and Form C contacts take two positions in the cavity. Identical contact blocks are used for the alarm and auxiliary switch functions.
Electronic breakers with communications options (Modbus RTU or CAM Link) lose one alarm switch position, but are also able to provide trip position via communications and the PXR programmable relays.

## Factory Installation of Alarm and Auxiliary Switches-Frame Size 4

Alarm and auxiliary switches are plug-and-play accessories designed to be field installable. However, Eaton also offers installation service in our factories.

Breaker catalog numbers with alarm and auxiliary switch combinations require a complete 20-digit catalog number, adding the alarm and
auxiliary switch functionality in digits 15-16 and adhering to the following conditions and tables:

- Digit 15 denotes the type of accessory(-ies) installed and the terminal types
- Switches may be requested for alarm only, auxiliary only or a combination of the two
- For Eaton factory installation, the same type of terminals (i.e., all pigtail 0.75 m , all screw, etc.) must be used. If a combination of alarm and auxiliary switches is selected, they must be the same type (i.e., all 1NC, all 1NO/1NC, etc.)
- Digit 16 denotes number and type (NO, NC) of switches installed
- If no other accessories are selected, use NNNN for the final 4 digits of the catalog number
- Electronic breakers with communications lose one alarm switch position in order to provide trip status via communications. They do not lose an auxiliary position for this purpose.

## Power Defense Molded Case Circuit Breakers-Frame Size 5

## Product Description

Frame Size 5 covers a global range of 320 A through 1200 A with a complete offering of advanced PXR electronic trip units. It includes two frame sizes of 800 A and 1200 A . Additionally, PD-5 has a 1600 A IEC (CE) and GB (CCC) frame that covers 800 A through 1600 A.

## Application Description

Frame Size 5 can be used to meet a wide range of circuit protection and power distribution needs, including ground fault protection, 100\% UL ratings, high interrupting capacity and high instantaneous settings for selective coordination. PXR trip units in PD-5 provide all levels of protection, including energy metering with multiple communication schemes, breaker health indication and arc flash reduction options.

## Features and Benefits

Frame Size 5 breakers are modular and available as complete breakers from the factory or as modular components, including frames, trip units, accessories and terminals to provide flexibility for customers. PXR trip units are available with advanced features to provide customers unparalleled situational awareness of their electrical system.

## Standards and Certifications

Power Defense breakers are designed and tested to meet stringent requirements for:

- UL
- CSA
- IEC (CE)
- CB (CCC)

C $\epsilon$

## Catalog Number / Product Selection

## Power Defense-Frame Size 5 (320-1200 A) for UL/CSA and 320-1600 A for IEC/CCC)

Frame Size 5 covers a range of 320 A through 1200 A using electronic trip units. It is available in configurations of 2-pole, 3-pole and 4-pole, with the 2-pole being in the same physical size of a 3-pole variant. Additionally, an IEC / CCC option is available for 1600 A, with selectable ratings from 800 A through 1600 A.

Power Defense Molded Case Circuit Breakers

## Molded Case Circuit Breakers with Power Xpert Release (PXR) Electronic Trip Units (ETU)

This information is presented as a tool to develop catalog numbers
for selecting Power Defense circuit breakers and trip units.
Molded Case Switches-Globally Rated (1)

Molded Case Circuit Breakers-IEC/CCC Rated (only available as a complete breaker)

Globally Rated Frame Only
PD-5 electronic breakers may also be purchased as separate frames, trip units, terminals, and accessories for field configuration of a final breaker. Each Frame Only device is marked with interrupting ratings and a maximum continuous current rating; each trip unit is also marked with a maximum continuous current rating, which must not exceed that of the frame. Additionally, 100\% UL Rated frames are marked as such on the Frame Only device.
This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.
Frame Only-Globally Rated

Frame Only-Globally Rated (100\% UL Rated)

## Notes

(1) Molded case switch may open above 14,000 A.
${ }^{2}$ 2 See tables and descriptions on Page V4-T2-74 for protection type (\#(1) $)$ and available configured options (\#(2)).

## Trip Units

PD-5 electronic breakers may also be purchased as separate frames, trip units, terminals, and accessories for field configuration of a final breaker. Each frame rating ( $800 \mathrm{~A}, 1200 \mathrm{~A}$, and 1600 A -IEC only) must use trip units of the same rating. Additionally, for two-pole breakers, three-pole trip units are used.
PDG designated trip units are for use with PDG and PDF breaker frames. The $100 \%$ rating for PDF ( $100 \%$ UL Rated) is marked on the frame, not the trip unit.

## Trip Units Only

This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.

## Descriptions of PXR Configured Options

Relays-3 Form A contacts (rated for 240 Vac, 1 A)

- Interface: 3 wires (ALM1, ALM2, ALM Common)
- Programmable to indicate breaker conditions
- Available as field-installable option if not pre-configured (catalog number
PDG56XRELAYS)
Modbus-Modbus RTU directly from breaker
- Interface: 3 wires (MODBA, MODBB, MODBG)
- No additional modules required
- Available as field-installable option if not pre-configured (catalog number PDG56XMODRTU)

ZSI-Zone Selective Interlocking

- Interface: 3 wires (Zin, Zout, Zcomm)
- Includes ability to turn ON and OFF, and indicate signals

CAM-CAM Link connection (requires a CAM module per breaker)

- Interface: 5 wires (refer to CAM IL for details)
- Communications Adapter Modules available for Modbus TCP and PROFIBUS

ARMS-Arcflash Reduction Maintenance System, or Maintenance Mode

- Available as trip unit Protection Type 4 or 5
- Interface: Switch and LED on face of trip unit and two wires for remote switch enable option ( 24 Vdc required)
- A programmable relay will be factory defaulted to remote indication of ARMS

## Auxiliary Power

- Connection included with all PXR 20, 20D, and 25 trip units
- Required for communications, relays, and metering accuracy
- $24 \mathrm{Vdc}, 0.5 \mathrm{~A}$
- Interface: 2 wires (Aux + 24 V , Aux 0 V)

Available Continuous Current $\left(I_{r}\right)$ Settings on PXR Electronic Trip Units
Catalog Number Selection and Maximum Setting ( $\mathrm{I}_{\mathrm{n}}$ )

| Option | Catalog Number Selection and Maximum Setting ( $\mathrm{n}_{\mathrm{n}}$ ) |  |  |  |

|  | 7 | 600 A | 900 A | 1300 A |
|  | 8 | 630 A | 1000 A | 1400 A |
|  | 9 | 700 A | 1100 A | 1500 A |
|  | $10=1 n$ | 800 A | 1200 A | 1600 A |
| PXR 20D, PXR 25 | Programmable from minimum to maximum values in 10 A increments. |  |  |  |

## Terminals-Frame Size 5

Terminals for Frame 5 are available as single terminals only, unless otherwise specified.
To configure both line and load of a 3-pole breaker, order quantity 6 terminals.
Terminal Types

Note: Pictures are for reference only.

Terminals

| Maximum <br> Breaker <br> Amperes | Terminal Body Type | Wire Type | Wire Class | Number of Conductors per Phase | AWG / kcmil Range per Conductor | Metric ( $\mathrm{mm}^{2}$ ) <br> Range per <br> Conductor | 3-Pole <br> Catalog Number | Hardware Included |

| 1200 | - | - | - | - | - | - | 5104A24G06 | Metric 4-pole |

Note: Wire capacity is based on standard imperial wire sizes; metric sizes provided in table are a direct conversion to demonstrate maximum capacity, not to denote metric wire sizes.

## Notes

(1) Add M at end for metric hardware.
(2) Included with $100 \%$ rated breaker.
${ }^{3}$ Kits include conductors for both sides of the breaker (e.g., 6 conductors for a 3-pole breaker). Order quantity 1 per breaker.

## Dimensions and Weights—Frame Size 5

Approximate Dimensions in Inches (mm)

| Number of Poles | Width | Height | Depth |
| :--- | :--- | :--- | :--- |
| 2 | $8.25(209.5)$ | $16(406.4)$ | $5.50(139.7)$ |
| 3 | $8.25(209.5)$ | $16(406.4)$ | $5.50(139.7)$ |
| 4 | $11.13(282.7)$ | $16(406.4)$ | $5.50(139.7)$ |

Approximate Shipping Weight in lb (kg)

| Breaker Type | 2-Pole | 3-Pole | 4-Pole |
| :--- | :--- | :--- | :--- |
| PDG5 800, 1200 <br> and 1600 A | $46.8(21.30)$ | $46.8(21.30)$ | $58(26.31)$ |

## Notes

(1) Provision only. For use with Type F Kirk keylock (sold separately). Bolt projection in withdrawn position is 0.375 in $(9.525 \mathrm{~mm})$.
(2) Breaker must be ordered with walking beam interlock ready modification from plant (factory suffix "WB").
${ }^{3}$ 3 Requires two breakers.
(4) Modification code for walking beam denotes modification to the breaker; accessory must be ordered separate.

## Power Defense Molded Case Circuit Breakers-Frame Size 6

## Product Description

Frame Size 6 covers a range of 700 A through 2500 A with a complete offering of advanced PXR electronic trip units. It includes three frame sizes of 1600 A, 2000 A and 2500 A.

## Application Description

Frame Size 6 can be used to meet a wide range of circuit protection and power distribution needs, including ground fault protection and 100\% UL ratings. PXR trip units in PD-6 provide all levels of protection, including energy metering with multiple communication schemes, breaker health indication and arc flash reduction options.

## Features and Benefits

Frame Size 6 breakers are modular and available as complete breakers from the factory or as modular components, including frames, trip units, accessories and terminals to provide flexibility for customers. PXR trip units are available with advanced features to provide customers unparalleled situational awareness of their electrical system.

## Standards and Certifications

Power Defense breakers are designed and tested to meet stringent requirements for:

- UL
- CSA
- IEC (CE)
- CB (CCC)

c $\epsilon$

## Catalog Number / Product Selection

## Power Defense-Frame Size 6 (700-2500 A)

Frame Size 6 covers a range of 700 A through 2500 A using electronic trip units. It is available in configurations of 2-pole, 3-pole and 4-pole, with the 2-pole being in the same physical size of a 3-pole variant.

# Molded Case Circuit Breakers 

Power Defense Molded Case Circuit Breakers

## Globally Rated Frame Only

PD-6 electronic breakers may also be purchased as separate frames, trip units, terminals, and accessories for field configuration of a final breaker. Each Frame Only device is marked with interrupting ratings and a maximum continuous current rating; each trip unit is also marked with a maximum continuous current rating, which must not exceed that of the frame. Additionally, 100\% UL Rated frames are marked as such on the Frame Only device.
This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.
Frame Only-Globally Rated

Frame Only-Globally Rated (100\% UL Rated)

## Trip Units

PD-6 electronic breakers may also be purchased as separate frames, trip units, terminals, and accessories for field configuration of a final breaker. Each frame rating (1600 A, 2000 A, and 2500 A) must use trip units of the same rating. Additionally, for two-pole breakers, three-pole trip units are used.
PDG designated trip units are for use with PDG and PDF breaker frames. The 100\% rating for PDF ( $100 \%$ UL Rated) is marked on the frame, not the trip unit.

## Trip Units Only

This information is presented as a tool to develop catalog numbers for selecting Power Defense circuit breakers and trip units.

## Power Xpert Release (PXR) Electronic Trip Units

Power Xpert Release (PXR) Electronic Trip Units

Note
(1) See PXR Trip Unit Options table on Page V4-T2-82 for protection type (\#(1) ) and available configured options (\#(2)).

## Descriptions of PXR Configured Options

Relays-3 Form A contacts (rated for 240 Vac, 1 A)

- Interface: 3 wires (ALM1, ALM2, ALM Common)
- Programmable to indicate breaker conditions
- Available as field-installable option if not pre-configured (catalog number
PDG56XRELAYS)
Modbus-Modbus RTU directly from breaker
- Interface: 3 wires (MODBA, MODBB, MODBG)
- No additional modules required
- Available as field-installable option if not pre-configured (catalog number PDG56XMODRTU)

ZSI-Zone Selective Interlocking

- Interface: 3 wires (Zin, Zout, Zcomm)
- Includes ability to turn ON and OFF, and indicate signals

CAM-CAM Link connection (requires a CAM module per breaker)

- Interface: 5 wires (refer to CAM IL for details)
- Communications Adapter Modules available for Modbus TCP and PROFIBUS

ARMS-Arcflash Reduction Maintenance System, or Maintenance Mode

- Available as trip unit Protection Type 4 or 5
- Interface: Switch and LED on face of trip unit and two wires for remote switch enable option ( 24 Vdc required)
- A programmable relay will be factory defaulted to remote indication of ARMS

## Auxiliary Power

- Connection included with all PXR 20, 20D, and 25 trip units
- Required for communications, relays, and metering accuracy
- $24 \mathrm{Vdc}, 0.5 \mathrm{~A}$
- Interface: 2 wires (Aux +24 V, Aux 0 V )

## Terminals—Frame Size 6

Terminals for Frame 6 are available as single terminals only, unless otherwise specified. To configure both line and load of a 3-pole breaker, order quantity 6 terminals.

Terminal Types

Note: Pictures are for reference only.

Terminals

| Maximum Breaker Amperes | Terminal Body Type | Wire Type | Wire Class | Number of Conductors per Phase | AWG / kcmil Range per Conductor | Metric ( $\mathrm{mm}^{2}$ ) <br> Range per <br> Conductor | 3-Pole <br> Catalog Number | Hardware Included |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Aluminum Terminal Options |  |  |  |  |  |  |  |  |
| 1600 | Aluminum | $\mathrm{Cu} / \mathrm{Al}$ | B, C | 4 | 500-1000 | 253-507 | PDG6X1TA1600 | Imperial |
| 2000 | Aluminum | $\mathrm{Cu} / \mathrm{Al}$ | B, C | 6 | 2-600 | 33.6-304 | PDG6X3TA2000 ${ }^{(2)}$ | Imperial bus connection |
| Copper Terminal Options |  |  |  |  |  |  |  |  |
| 1600 | Copper | Cu | B, C | 4 | 1-600 | 42.4-304 | PDG6X1T1600 | Imperial |
| Rear Connectors (3) |  |  |  |  |  |  |  |  |
| 2000 | Copper |  |  |  |  |  | PDG6X1T2000RC | Imperial |
| 2000 | Copper |  |  |  |  |  | PDF6X1T2000RC ${ }^{4}$ | Imperial |
| 2500 | Copper |  |  |  |  |  | PDG6X1T2500RC | Imperial |

Note: Wire capacity is based on standard imperial wire sizes; metric sizes provided in table are a direct conversion to demonstrate maximum capacity, not to denote metric wire sizes.

## Notes

(1) Add $\mathbf{M}$ at end for metric hardware.
(2) Only available for 3-pole breaker; order quantity 1 per breaker side, or quantity 2 per breaker.
(3) Kit includes one conductor and hardware; order quantity 6 for both sides of a 3 -pole breaker.
(4) Included with $100 \%$ rated breaker.

## Accessories

Internal Accessory Configurations-Frame Size 6
2 All Frame 6 accessories are installed in an internal pocket to the right of the breaker handle.
Internal Accessory

| Accessory <br> Slot 10 ptions | Accessory Slot 2 Options |  |

| 4 | $20(508.0)$ | $16(406.4)$ | $9.75(247.7)$ |

Approximate Shipping Weight in lb (kg)

| Breaker Type | 2-Pole | 3-Pole | 4-Pole |
| :--- | :--- | :--- | :--- |
| PDG6 1600 and 2000 A | 102(46.3) | 102(46.3) | $135(61.2)$ |
| PDG6 2500 A | $135(61.2)$ | $135(61.2)$ | $182(82.6)$ |

## Notes

(1) Provision only. For use with Type F Kirk keylock (sold separately). Bolt projection in withdrawn position is 1.00 in ( 25.4 mm ).
(2) Breaker must be ordered with walking beam interlock ready modification from plant (factory suffix "WB").
(3) Requires two breakers.
(4) Modification code for Walking Beam denotes modification to the breaker; accessory must be ordered separate.

# Molded Case Circuit Breakers 

Power Defense Molded Case Circuit Breakers

## Motor Circuit Protectors (3-600 A)

## Power Defense Molded Case Circuit Breakers-Motor Circuit Protectors

## Product Description

Motor circuit protectors (MCPs) are instantaneous-only devices available in ratings from 3 A to 600 A. Power Defense MCPs are available in Frame Sizes 1, 2 and 3, and are designated by the trip unit digits in the catalog number (Digits 11-13), always use M as Digit 11. Digit 12 designates the calibration ( $\mathrm{S}=$ Standard, $H=$ High, L = Low), and always use A as Digit 13 to indicate an adjustable instantaneous setting.

## Application Description

MCPs are designed to be used in combination with motor starters. Power Defense MCPs are typically used in combination with motor starters, usually NEMA sizes 0 through 6. Each MCP device is calibrated at a minimum for six trip settings to provide flexibility in its application. Typical motor full load currents and NEMA starter sizes are provided for each device and setting, only as a guide for selecting MCPs; actual motor characteristics and design parameters must be used to determine the adequate device and setting to be used in the application.

## Features and Benefits

Power Defense MCPs are of a modular design, with fieldinstallable accessories and terminals. Accessories and terminals for MCPs are common with the accessories used for the equivalent frame size molded case circuit breaker. Accessories may be field or factory installed. For factory installation, follow the same catalog numbering guidelines provided for the respective equivalent circuit breaker frame.

## Standards and Certifications

MCPs are UL Recognized Components (UL File E7819) and comply with the applicable requirements of the UL 489 standard. Eaton MCPs are also UL Listed in combination with Eaton motor starters under various UL file number; reference UL's website for additional information.

MCPs are also designed to comply with CSA Standard C22.2 No. 5, IEC 60947-2 (Annex O), and GB 14048.2.
As such, they carry the
following markings:

- UL
- CSA
- IEC (CE)
- CB (CCC)

C $\epsilon$

## Frame Size 1 Product Selection

PDG1 MCPs cover a continuous current range of 3 A through 100 A , with trip calibration settings from 9 A through 1100 A . All devices are a 3-pole configuration and have a single interrupting capacity as an IEC 60947-2 (Annex O) instantaneous trip circuit breaker.
PDG1 MCPs include six trip settings, corresponding to $3 x$ through $11 x$ of the continuous amperage rating of the device, and each corresponding to $13 x$ the minimum FLA value shown in the table below.

Where a $13 x$ setting is required for an intermediate FLA value, alternate CAM settings and/or MCP ratings should be used.

A High Calibration MCP for the 100 A device is also available for special applications where the ampere rating of the disconnecting means cannot be less than $115 \%$ of the motor full load ampere rating, and includes settings corresponding to 5 x to 15 x of the continuous ampere rating of the device.

All catalog numbers shown include standard line and load steel terminals (Digit $14=\mathrm{J}$ ). For aluminum terminals, use T in Digit 14 of the catalog number.

Terminal catalog numbers listed in the table are for one side of the MCP; order 2 sets for line and load if ordering separate.

## Ratings

Maximum Application Voltage
(UL and CSA)

- 600Y/347 Vac
- 480 Vac
- 250 Vdc

Note: For DC applications, actual trip levels are approximately $40 \%$ higher than values shown.

|  |  | F | 15x | 1500 |  | (1) |  |  |

Note
(1) Settings above 85 A are for special applications. NEC Article 430.110(a) requires the ampere rating of the disconnecting means to be not less than $115 \%$ of the motor full load ampere rating

Frame Size 2 Product Selection
PDG2 MCPs cover a continuous current range of 3 A through 150 A , with trip calibration settings from 9 A through 2500 A . All devices are a 3-pole configuration and have a single interrupting capacity as an IEC 60947-2 (Annex O) instantaneous circuit breaker.

PDG2 MCPs include eight trip settings, corresponding to $3 x$ through 10x of the continuous amperage rating of the device, and each corresponding to $13 x$ the minimum FLA value shown in the table below.

Where a $13 x$ setting is required for an intermediate FLA value, alternate dial settings and/or MCP ratings should be used.
A High Calibration MCP for the 150 A device is also available for special applications where the ampere rating of the disconnecting means cannot be less than $115 \%$ of the motor full load ampere rating.

Additionally, four Low
Calibration devices are available for low magnetic protection special applications.
All catalog numbers shown include standard line and load terminals (Digit $14=\mathrm{J}$ ). For optional terminals, use T, W or other options in Digit 14 as described in the Frame Size 2 circuit breaker section of the catalog.
Terminal catalog numbers listed in the table are for one side of the MCP; order 2 sets for line and load if ordering separate.

# Molded Case Circuit Breakers 

Power Defense Molded Case Circuit Breakers

400 A Frame Size 3 Product Selection

PDG3 400 A Frame MCPs cover a continuous current range of 70 A through 400 A , with trip calibration settings from 350 A through 4500 A.
All devices are a
3 -pole configuration in a 400 A frame and have a single interrupting capacity as an IEC 60947-2 (Annex O) instantaneous circuit breaker.

PDG3 MCPs include nine trip settings, corresponding to $5 x$ through $10 x$ of the continuous amperage rating of the device and each corresponding to $13 x$ the minimum FLA value shown in the table below.

Where a $13 x$ setting is required for an intermediate FLA value, alternate dial settings and/or MCP ratings should be used.
A High Calibration MCP for the 400 A frame device is also available for special applications where the ampere rating of the disconnecting means cannot be less than $115 \%$ of the motor full load ampere rating.

All catalog numbers shown include standard aluminum line and load terminals (Digit $14=\mathrm{J}$ ). For optional terminals, use T (aluminum), W (copper) or other options in Digit 14 as described in the Frame Size 3 circuit breaker section of the catalog.
Terminal catalog numbers listed in the table are for one side of the MCP; order 2 sets for line and load if ordering separate.

## Ratings

Maximum Application Voltage
(UL and CSA)

- 600 Vac
- 250 Vdc

Note: For DC applications, actual trip levels are approximately 40\% higher than values shown.

IEC Instantaneous Circuit Breaker (ICB) Interrupting Capacity (kA)

|  | $\mathbf{I}_{\text {cu }}$ | $\mathbf{I}_{\text {cs }}$ |

## 600 A Frame Size 3 Product Selection

PDG3 600 A MCPs cover a continuous current range of 250 A through 600 A , with trip calibration settings from 1250 A through 6000 A. All devices are a 3-pole configuration in a 600 A frame and have a single interrupting capacity as an IEC 60947-2 (Annex O) instantaneous circuit breaker.

PDG3 MCPs include nine trip settings, corresponding to $5 x$ through $10 x$ of the
continuous amperage rating of the device, and each corresponding to $13 x$ the minimum FLA value shown in the table below. Where a $13 x$ setting is required for an intermediate FLA value alternate dial settings and/or MCP ratings should be used.
All catalog numbers shown include standard line and load terminals (Digit $14=\mathrm{J}$ ). For optional terminals, use T (aluminum) W (copper) or
other options in Digit 14 as described in the Frame Size 3 circuit breaker section of the catalog.

Terminal catalog numbers listed in the table are for one side of the MCP; order 2 sets for line and load if ordering separate.

## Ratings

Maximum Application Voltage (UL and CSA)

- 600 Vac
- 250 Vdc

Note: For DC applications, actual trip levels are approximately $40 \%$ higher than values shown.

IEC Instantaneous Circuit Breaker (ICB) Interrupting Capacity (kA)

Note: 800 and 1200 A, 600 Vac maximum motor circuit protectors are available as Series C HMCP product.

## Additional Information

## Terminals

Available terminal configuration for MCPs follow the same guidelines as presented for each circuit breaker frame. Additional terminals, including control wire, StrandAble and other options are presented in each Power Defense circuit breaker frame size section.

## Accessories

MCPs and MCCBs for each frame use a common set of accessories. Available accessories are presented in each corresponding Power Defense circuit breaker frame section (i.e., PDG1
accessories are found in the Frame Size 1 section, PDG2 accessories in the Frame Size 2 section and PDG3 in the Frame Size 3 section).

## Weights and Dimensions

MCPs have the same dimensions and weight as the 3 -pole version of the respective circuit breaker, shown in each frame section.

## Motor Protection Circuit Breakers (15-600 A)

## Power Defense Molded Case Circuit Breakers-Motor Protection Circuit Breakers

## Product Description

Power Defense motor protection circuit breakers (MPCBs) use Power Xpert Release (PXR) electronic trip units to provide branch protection and motor protection in a combined device, eliminating the need for a separate overload relay. Motor protection PXR units build upon the features available in standard PXR trip units and add motor protection application specific functionality and features. MPCBs are available in Power Defense Frame Sizes 2 and 3, and share accessories and catalog numbering convention with the respective molded case circuit breaker frames.

## Application Description

MPCBs meet requirements for motor branch protection, including disconnecting means, branch circuit shortcircuit protection and overload protection. MPCBs can be used with a contactor to eliminate the need for overload relay and still create manual motor control. Typical branch motor starter applications are protected by three components consisting of: breaker, contactor and overload relay, or fuse, contactor and overload relay. The MPCB applicationspecific protection eliminates the need for motor overload relay and reduces the traditional three-component starter assembly down to two elements-the MPCB and the contactor.

## Features and Benefits

PXR motor protection electronic trip units provide motor protection basic and advanced functionality in PXR 10 and PXR 25, respectively. Features include phase unbalance protection, phase loss protection, over/under voltage protection, cold/hot start (thermal memory) protection, programmable high load alarms, programmable relays for multiple functions to include pre-detection trip relay, Class 5/10/15/20/30 protection, energy metering, communications, cause-oftrip indication, events logging, breaker health monitoring, harmonics, ground fault alarm and protection, and more.

ZSI allows the MPCB to interface with upstream feeder or branch circuit breakers for coordination and reduction of arc flash for some applications.

## Standards and Certifications

MPCBs provide:

- UL 489 branch circuit protection
- UL 508 and CSA C22.2 No. 14 motor protection, and meet IEC 60947-2 and 50947-4 requirements

Power Defense MPCBs meet:

- UL 489
- CSA
- C22.2 No. 5-02
- IEC 60947-2
- GB 14048.2-2008

( $\epsilon$

## Catalog Number / Product Selection

Power Defense MPCB-Frame Size 2 (15-200 A)
Frame Size 2 covers a range of 15 A through 200 A using PXR 10 and PXR 25 electronic trip units. In is available in 3-pole configurations.

## Power Defense MPCB - Frame Size 3 (45-600 A)

Frame Size 3 covers a range of 45 A through 600 A using PXR 10 and PXR 25 electronic trip units.
In is available in 3-pole configurations. Frame 3 has two specific constructions, one each for 400 A and 600 A .
The 600 A construction provides a unique capability to be used at 400A and below in applications requiring
higher fixed instantaneous levels. This is accomplished by using a letter H in the 7th digit of the catalog number.

(1) See "Power Xpert Release (PXR) Trip Unit Options" table on the next page for \# (Available Configured Options).

Power Defense Molded Case Circuit Breakers

Power Xpert Release (PXR) Trip Unit Options

## Descriptions of PXR Configured Options

Relays-2 Form A contacts (rated for 240 Vac, 1 A)

- Interface: 3 wires (ALM1, ALM2, ALM Common)
- Programmable to indicate breaker conditions
- Field installable for PD-2

Note: PD-2 includes 1 relay when used in conjunction with Modbus RTU.

Modbus—Modbus RTU directly from the breaker

- Interface: 3 wires (MODBA, MODBB, MODBG)
- No additional modules required
- Field installable for PD-2

ZSI-Zone Selective Interlocking output

- Interface: 2 wires (Zout, Zcomm)
- Includes ability to turn ON and OFF, and indicate signals
CAM—CAM Link connection (requires a CAM module per breaker)
- Interface: 5 wires (refer to CAM IL for details)
- Communications Adapter Modules available for Modbus TCP and PROFIBUS

## Auxiliary Power

- Connection included with all PXR 25 trip units
- Required for communications, relays, and metering accuracy
- $24 \mathrm{Vdc}, 0.5 \mathrm{~A}$
- Interface: 2 wires

Aux +24 V, Aux 0 V)

Available Settings and Features on PXR Motor Protection Electronic Trip Units

| Option | Full Load Amperes ( $\mathrm{I}_{\mathrm{e}}$ ) Current Settings PD-2 |  |  |  | Full Load Amperes ( $\mathrm{I}_{\mathrm{e}}$ ) Current Settings PD-3 |  |  |  |  |

PXR $25 \quad$ Programmable from minimum to maximum values in 1 A increments.

Trip Profile (Trip Class and Phase Unbalance)

PXR 10—Dial 2

| Setting | Dial <br> Label | Trip <br> Class | Phase <br> Unbalance |
| :--- | :--- | :--- | :--- |
| 1 | A | 5 | OFF |
| 2 | B | 10 | OFF |
| 3 | C | 15 | OFF |
| 4 | D | 20 | OFF |
| 5 | E | 30 | OFF |
| 6 | F | 5 | ON |
| 7 | G | 10 | ON |
| 8 | H | 15 | ON |
| 9 | J | 20 | ON |
| 10 | K | 30 | ON |

## PXR 10—Phase Unbalance

 Settings Programmable by PXPM- Pickup Level:

5 to $35 \%$ of load

- Trip Time:

1 to 300 seconds

- Action taken: MPCB will trip at selected protection settings

## PXR 25-Programmable

Trip Class

- Trip Class: 5-30 in increments of 0.1

Phase Unbalance

- Pickup Level: 5 to $35 \%$ of load
- Trip Time: 1 to 300 seconds
- Action taken: MPCB will trip at selected protection settings

## Phase Loss

- Pickup Level: Fixed at 75\% of load
- Trip Time: 1 to 240 seconds
- Action taken: May be set to trip or alarm

Short Delay /
Instantaneous Settings
MPCBs with PXR 10 include a combined Short Delay and Instantaneous trip dial. The short delay time may be programmed to trip instantaneously or with a delay for coordination or to avoid nuisance tripping. Breakers with PXR 25 trip units include independent adjustments for short delay and instantaneous settings.

## PXR 10-Dial 3 Programmable

| Setting | $I_{\text {sd }}$ ( $x \mathrm{I}_{\mathrm{e}}$ ) | $t_{\text {sd }}(\mathbf{s e c})$ |
| :---: | :---: | :---: |
| 1 | 3 | Default to INST; programmable via USB and PXPM to INST, 0.150 or 0.300 . INST / 0.150 / 0.300 |
| 2 | 4 |  |
| 3 | 5 |  |
| 4 | 6 |  |
| 5 | 7 |  |
| 6 | 8 |  |
| 7 | 10 |  |
| 8 | 11 (1) |  |
| 9 | $12^{(1)}$ |  |
| 10 | 13 (1) |  |

## Note

(1) If setting value exceeds the fixed magnetic override of the device, the setting defaults to the magnetic override value (please verify these values in the time current curves or PXR user manual.

## PXR 25-Programmable

Short delay pickup-I $I_{s d}\left(\left.x\right|_{e}\right)$

- $3 x-13 x$ : Programmable in increments of 0.1x
Short delay time- $\mathrm{t}_{\mathrm{sd}}(\mathrm{sec})$
- 0.05-0.50: Programmable in increments of 0.01 sec
- Fixed (flat) response

Instantaneous pickup- $\mathrm{l}_{\mathrm{i}}\left(\mathrm{x} \mathrm{I}_{\mathrm{n}}\right)$

- 3x-Maximum: Programmable in increments of 0.1x
- Maximum is determined by frame fixed magnetic override level

## Ground Fault Protection Settings

MPCBs with PXR 25 include an option to add ground fault protection. Ground fault protection includes the ability to trip and/or alarm on a determined ground fault condition.

Phase Unbalance

- Pickup Level: 5 to $35 \%$ of load
- Trip Time: 1 to 300 seconds
- Action taken: May be set to trip or alarm
Phase Loss
- Pickup Level: Fixed at $75 \%$ of load
- Trip Time: 1 to 240 seconds
- Action taken: May be set to trip or alarm

## Metering and

Communications Capabilities
PXR 25 motor protection trip units include the same advanced metering functions as the MCCB PXR 25, including

- Energy metering to 1\% accuracy
- Current metering to $0.5 \%$ accuracy
- Multiple communications options, including standard Modbus RTU
- Load alarm at two programmable levels between 50\% to 120\%
- Programmable relays for remote indication

## Advanced Motor Protection Settings

MPCBs with PXR 25 trip units also include additional application specific motor protection features. These features may be set to trip the breaker, alarm (indication via programmable relays), or disabled.

Over Voltage

- Pickup Level: 180 to 720 V
- Trip Time: 1 to 300 seconds

Under Voltage

- Pickup Level: 60 to 670 V
- Trip Time: 1 to 300 seconds

Voltage Unbalance (between phase-to-phase readings)

- Pickup Level: 5\% to 25\% difference
- Trip Time:

1 to 300 seconds
Phase Rotation

- Configuration:

ABC or CBA sequence

- Time: Fixed at 200 ms

Reverse Power

- Pickup Level: 1-65,500 kW
- Trip Time: 1 to 300 seconds
Total Harmonic Distortion
- Line-to-line and line-toneutral voltage
- Each phase and neutral current
- 1st through 29th at $60 \mathrm{~Hz} /$ 1st through 35th at 50 Hz

## Additional Information

## Terminals

Available terminal configuration for MPCBs follow the same guidelines as presented for each circuit breaker frame. Additional terminals, including control wire, StrandAble and other options are presented in each Power Defense circuit breaker frame size section.

## Accessories

MPCBs and MCCBs for each frame use a common set of accessories. Available accessories are presented in each corresponding Power Defense circuit breaker frame section (i.e., PDG2 accessories are found in the Frame Size 2 section and PDG3 in the Frame Size 3 section). All Frame Size 2 MPCBs are automatically configured with 1 Form C auxiliary switch.

## Weights and Dimensions

MPCBs have the same
dimensions and weight as the
3 -pole version of the
respective circuit breaker,
shown in each frame section.
2.2

Terminals, Lugs and Connectors

## Terminals, Lugs and Connectors

## Product Description

Standard Terminals
Eaton's Power Defense molded case circuit breakers (MCCB) can be configured with line and load terminals factory installed or shipped separately for field installation. Each terminal provides wire connecting capabilities for specific ranges of continuous current ratings and wire types. Wire connecting terminals are typically secured to the breaker using slotted or hex head screws and use various hardware types for securing connection to the wire. For proper terminal-breaker or terminal-wire torque requirements, please consult the detailed selection tables in this catalog or the specific markings on the terminal.

## Application Description

 Terminal Ratings$\mathrm{Cu} / \mathrm{Al}, \mathrm{Cu}$, or Al
Each terminal is marked with information specific to the wire material type that it is rated for use with. In most electrical applications, the conductor material is comprised of copper or aluminum bus bar or stranded wire. Each is considered effective material for conducting electricity and both have different advantages. Copper has higher conductivity as well as superior tensile strength, which is considered an advantage in the event of a high current fault. Aluminum is a lighter material with greater pliability and is also generally more cost-effective. Each terminal is labeled to indicate which material it is rated for use with as outlined on Page V4-T2-104.

## Application Description

Terminal Ratings

## $75^{\circ} \mathrm{C}$ vs. $90^{\circ} \mathrm{C}$

 Terminal RatingTerminals are marked to indicate the maximum wire temperature rating that is approved for use. In relation to molded case circuit breaker application, the temperature rating is typically $90^{\circ} \mathrm{C}$ or $75^{\circ} \mathrm{C}$. Although the terminal is marked with applicable wire temperature rating, it is important to note UL 489, the standard to which MCCBs adhere, only recognizes $60^{\circ} \mathrm{C}$ and $75^{\circ} \mathrm{C}$ wire for testing purposes and rated use. If $90^{\circ} \mathrm{C}$ wire is used to connect to an MCCB, the wire must be applied at its $75^{\circ} \mathrm{C}$ rated ampacity. As an example, $90^{\circ} \mathrm{C}$ wire is often required for use in 100\% continuous current rated MCCB applications. When this is the case, the $90^{\circ} \mathrm{C}$ wire must be applied at its $75^{\circ} \mathrm{C}$ rated ampacity, which often results in the wire being selected one size larger than typical. An example of the terminal markings and corresponding designations is on Page V4-T2-104.

## Standards and Certifications

All terminals comply with UL Standards 486A and 486B and CSA Standard C22.2 No. 65M.

Terminal Marking Example (1)

Legend

| $\mathrm{AL}-$ Aluminum conductors |
| :--- |
| $\mathrm{CU}-\mathrm{Copper}$ conductors |
| $7-90^{\circ} \mathrm{C}$ wire |
| $-75^{\circ} \mathrm{C}$ wire |

Example: AL9CU—Rated for use with aluminum and copper and is $90^{\circ} \mathrm{C}$ rated.

## Note

(1) If the terminal is not marked to indicate maximum wire temperature rating, it should be assumed that $75^{\circ} \mathrm{C}$ is the maximum wire rating

## Cable Sizing/Selection

When sizing and selecting cable for use with a molded case circuit breaker, the temperature rating of both the breaker terminals and the electrical equipment connectors must be considered to ensure proper size and insulation rating can be chosen. The equipment labeling or installation guidelines must be reviewed to determine the proper cable size and insulation required, regardless of the ratings listed on the terminal. For general selection guidelines, NEC Article 310 (NEC 2017) outlines the use of "Conductors for General Wiring" and can be a resource for determining appropriate cable size based on the temperature rating, wire type and amperage requirement.

Special Application Terminals Multi-Wire Terminals

The use of load-side multi-wire terminals provides an alternative to power distribution blocks by distributing the electrical load directly from the circuit breaker to multiple downstream devices. These terminals can be installed in the field or specified for factory installation. Kits typically include terminal shields, mounting hardware, insulators and tin-plated connectors. Multi-wire terminals connect directly to the circuit breaker and eliminate the need for additional short-circuit combination ratings, as required by separate power distribution blocks. Direct connection to the breaker also saves space in the panel and eliminates wiring. Multiwire terminals are UL listed for use on the load side of the circuit breaker.

Standard molded case circuit breaker terminals are listed for Class B and C rigid wire by default in accordance with UL 489 \& 486 standards. Eaton's StrandAble terminals allow for direct connection to the circuit breaker with nearly any class of rigid or fine strand wire. This eliminates the need for any additional fittings and ensures UL compliance with all components connected to the breaker. Rated for use with the eight most common wire classes, StrandAble terminals offer a breaker integrated solution that can eliminate time and save cost in an electrical assembly.

## Rear Fed Terminals

Rear fed terminals allow the ability to connect cable from the back of the breaker instead of the top or bottom. This allows for easier connection when the breaker is more accessible from the back. A kit of three terminals typically includes terminal shields or interphase barriers.

End Cap/Screw Terminal Kits

An end cap kit slides onto the line or load side of the circuit breaker and acts as a threaded adapter for the conductor to accept a ring terminal (compression lug) or other bolt-on connector. The kit is designed to meet any requirements for clearance and is capped to provide finger protection once installed. Each kit includes a threaded base and the required hardware for securing the connector.

Note: As standard, Power Defense frame sizes 4, 5 and 6 include imperial threaded conductors (optional metric threading). No additional components are required to connect a compression lug or other bolted connection to these frames.

## Control Wire Terminals

Control wire terminals and control wire kits are offered to provide means to tap off control power from the circuit breaker using the male end of a quick disconnect. Varying for each frame size, the tabs can be ordered separately for field installation or factory installed onto the terminal.

## Catalog Numbering System Overview

## Breakers

Power Defense breakers are configured using a 20 -digit catalog number that can be divided into two sections:

- Base breaker catalog number = digits 1-14
- Factory modifications = digits 15-20
Product may be ordered
using the base breaker
catalog number (14 digits)
only. However, if factory
modifications are required,
including installation of
accessories, the full breaker
catalog number plus factory
modifications (20 digits) for
a configured breaker must
be used. using the base breaker catalog number (14 digits) only. However, if factory modifications are required, including installation of accessories, the full breaker catalog number plus factory modifications (20 digits) for be used.

Note that most of the accessories and terminals for Power Defense molded case circuit breakers are field installable.

Base Breaker Catalog Number (14 digits with standard terminal configuration)
The catalog number has fixed positions for each breaker characteristic. The fixed format allows a customer to determine the performance characteristics of the product by parsing the catalog number. The format of the Power Defense breaker catalog number is as follows:

| Catalog Number | PD | G | $\mathbf{3}$ | $\mathbf{3}$ | F | $\mathbf{0 4 0 0}$ | TFA | J |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Digits | $\mathbf{( 1 , 2 )}$ | (3) | (4) | $(\mathbf{5 )}$ | $\mathbf{( 6 )}$ | $\mathbf{( 7 - 1 0 )}$ | (11-13) | (14) |
| Meaning | Power | Certifications | Frame Size | Poles | Interrupting <br> rating | Continuous <br> current rating | Trip unit type | Terminals |
|  | Defense | and Standards |  |  |  |  |  |  |

## Terminal Catalog Number (if ordered separately)

Each terminal catalog number has consistent nomenclature that can be used for deciphering specific terminal characteristic. The consistent format allows the customer to determine the applicable breaker frame, quantity included in each kit and base terminal type.

| Catalog Number | PD | G | $\mathbf{3}$ | $\mathbf{X}$ | $\mathbf{3}$ | TA400 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Digits | $(\mathbf{1 , 2 )}$ | (3) | (4) | (5) | (6) | (7-end) |
| Meaning | Power | Certifications | Frame Size | Denotes <br> accessory | Quantity included <br> in kit | Base terminal (marked on <br> each component) |

# Molded Case Circuit Breakers 

Power Defense Molded Case Circuit Breakers

## Specifying Terminals on a Breaker (Digits 14/19-20)

The 14th digit of each base breaker catalog number indicates the terminal configuration. For breakers that require terminals on the line side only, load side only, or use the same terminals for line and load side, the 14th digit can be used to specify the terminal requirement.

For breakers that require special terminal configurations, such as different terminals on line and load side, a configured 20digit catalog number must be utilized. When different terminals are required on each side, the Power Defense catalog number structure will maintain consistency.

In cases where a 20 -digit catalog number is required, digit 14 will always be utilized to specify the line side terminal requirement. Digits 19-20 will be utilized to specify the load side configuration. This can be accomplished by using the letter " $Z$ " in digit 19 and specifying the load terminal using digit 20 .

Example: 20-Digit Catalog Number-Frames 1-4 with Different Line and Load Terminals

| $\begin{aligned} & \text { PD } \\ & (1,2) \end{aligned}$ | G <br> (3) | $2$ <br> (4) | $3$ <br> (5) | $F$ <br> (6) | $\begin{aligned} & 0225 \\ & (7-10) \end{aligned}$ | $\begin{aligned} & \text { TFF } \\ & \text { (11-13) } \end{aligned}$ | K <br> (14) | $\begin{aligned} & \text { NN } \\ & (15-16) \end{aligned}$ | $\begin{aligned} & \text { NN } \\ & (17-18) \end{aligned}$ | $\begin{aligned} & \text { ZG } \\ & \text { (19-20) } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Power <br> Defense | Certifications and Standards | Frame Size | Poles | Interrupting rating | Continuous current rating | Trip unit type | Line side terminals | Indicating accessory | Tripping accessory | Load side terminals |

The example above illustrates a Power Defense Frame 2 circuit breaker configured with different terminals on the line and load side. Digit $14(\mathrm{~K})$ indicates standard terminals, PDG2X3TA225, on the line side.
Digits 19-20 (ZG) indicate special multi-wire terminals, PDG2X3TA2256W, on the load side.

## Specifying Terminals on a Breaker (Frames 5 and 6)

Power Defense frames 5 and 6 are most commonly ordered without terminals installed at the factory. These frames include tapped conductors that can be specified for imperial or metric threading. This allows for increased flexibility when making field connections to the breaker conductors.

For frames 5 and 6, standard 14-digit catalog numbers will not include terminals. The 14th digit of the catalog number will indicate imperial or metric threaded conductors.

If factory-installed terminals are required for frames 5 or 6, they can be specified using a complete 20-digit catalog number. In these cases, the 14th digit will indicate the conductor threading and digits 19-20 will specify the terminal type.

Example: 20-Digit Catalog Number-Frames 5 and 6 with Factory-Installed Terminals

| $\begin{aligned} & P D \\ & (1,2) \end{aligned}$ | G <br> (3) | 5 (4) | 3 <br> (5) | M <br> (6) | $\begin{aligned} & 1200 \\ & (7-10) \end{aligned}$ | $\begin{aligned} & \text { P5D } \\ & \text { (11-13) } \end{aligned}$ | M <br> (14) | $\begin{aligned} & \text { NN } \\ & (15-16) \end{aligned}$ | $\begin{aligned} & \text { NN } \\ & (17-18) \end{aligned}$ | ZJ (19-20) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Power Defense | Certifications and Standards | Frame Size | Poles | Interrupting rating | Continuous current rating | Trip unit type | Threading type | Indicating accessory | Tripping accessory | Terminals |

The example above illustrates a Power Defense frame 5 circuit breaker configured with factoryinstalled terminals. Digit $14(\mathrm{M})$ indicates metric threaded conductors on the line and load side. Digits 19-20 (ZJ) indicate terminal, PDG5X1TA1200, installed on the line and load side.

Power Defense Molded Case Circuit Breakers-Communications and Software

## Communications and Software

## Communication Adapter Modules

## Product Description

Designed for Power Defense circuit breakers, the Power Xpert Release (PXR) communications adapter module (CAM) expands the communication capabilities of the PXR 20, PXR 20D and PXR 25 electronic trip units. When used in conjunction with an loT-based system, the PXR-CAMs allow for greater visibility into the facility, process or machine, thus adhering to the design principles of Industry 4.0.

## Application Description

- Improve safety with remote breaker control via programmable discrete I/O
- Perform at-a-glance troubleshooting with front-facing LEDs that communicate status and alarms
- Simplify configuration and monitoring with intuitive HTML5 web interface (ECAM only)

## Features and Benefits

- Compact, DIN rail mounted design with removable terminal blocks offers space savings, fast installation and accessibility for maintenance
- Dimensions: 4.30 in $(110 \mathrm{~mm}) \mathrm{H}$ 1.20 in $(30 \mathrm{~mm}) \mathrm{W}$ 4.30 in ( 110 mm ) D

## Supported Protocols

- Modbus TCP/IP CAM for PXR 20, 20D, 25 Catalog number: PXR-ECAM-MTCP
- PROFIBUS DP CAM for PXR 20, 20D, 25 Catalog number:
PXR-PCAM

Power Defense Molded Case Circuit Breakers

## Modbus RTU RS-485

## Product Description

Power Xpert Release (PXR) trip units have optional integral Modbus RTU communication on the PXR 20. Modbus RTU comes standard on the PXR 20 D and 25.

## Application Description

 With this industry standard protocol, the PXR trip units can supply real-time data such as voltage, current, power, health and status to any Modbus RTU client without any additional external device.
## Field Installation

Field-installable options are available on the PXR 20 for Power Defense frames 2, 5 and 6. See catalog numbers below:

- Field installable Modbus RTU with Relay for PD-2: PDG2XMODRTUREL
- Field installable Modbus RTU for PD-5 and 6: PDG56XMODRTU

## Power Xpert Protection Manager

## Product Description

Eaton's Power Xpert Protection Manager (PXPM) software provides a clean, intuitive user interface enabling unmatched control, testing and troubleshooting.
The software is free to download and can run all standard features on any PC. Licenses can be purchased to unlock premium features: secondary injection testing and trip/alarm waveform.
Communication between PXPM and PXR trip units is made via USB or through connected networks.

## Features and Benefits

- Set point configuration: allows direct-to-trip unit or offline setup, including duplication of settings between units
- Control mode: capture waveforms, reset trip unit or set the date/time
- Real-time data: provides information regarding all status and metered data direction from the trip unit
- Event summaries: stores up to 200 events, detailed information on the most recent (10 trip and 10 alarm) events, and time adjustments to the realtime clock
- Reports: allows for the formatting and printing of real-time data of performed secondary injection tests

## Secondary Injection Testing

The secondary injection test function utilizes a separate circuit that injects a signal in parallel with and representative of the output of the current sensor. All the built-in protection circuitry and routines respond per the settings in the breaker. The PXPM software can initiate testing of long delay trip, short delay trip, instantaneous trip, maintenance mode and ground (earth) fault trip via the USB communication.

The current sensor test utilizes a separate circuit to create a signal that is directed though the Rogowski coil. This signal will verify continuity and functionality of the Rogowski coil.

Feature license catalog number: PXPM-SW-TEST

## Trip/Alarm Waveform

 PXPM's trip/alarm waveform feature allows PXR trip units to capture and display the breaker state leading up to the last trip or alarm event, provided that auxiliary power is connected.Available waveform data includes minimum and maximum phase current, voltage and frequency. Using this information increases uptime by identifying issues causing an event and minimized breaker wear by identifying potential tripping issues faster, without the need for expensive standalone testing equipment.

Feature license catalog number: PXPM-SW-WAVE

## Special Applications

## Extreme Temperature Applications

The Technical Data section of this catalog (Pages V4-T2-12
-V4-T2-20) presents permissible loads for each breaker type at ambient temperatures ranging from $40^{\circ} \mathrm{C}$ through $70^{\circ} \mathrm{C}$. The tables are presented as an aid in selecting breakers appropriate for the application.
Per industry standards, breakers are calibrated to perform at an ambient temperature of $40^{\circ} \mathrm{C}$. Thermal-magnetic breakers are temperature sensitive, and at temperatures above $40^{\circ} \mathrm{C}$ will carry less current than their continuous current rating.This high temperature condition promotes nuisance tripping and can create unacceptable temperature conditions inside the breaker and at the terminals. To prevent these issues, the ambient temperature load derating values presented in the technical data section must be followed. Additionally, special $50^{\circ} \mathrm{C}$ calibrated breakers are availablenote that these do not carry a UL Listing.

Electronic breakers are insensitive to ambient temperature within a certain range and are not likely to nuisance trip. However, if the ambient temperature significantly exceeds $40^{\circ} \mathrm{C}$ the electronic circuitry or other internal components could become damaged. Power Defense electronic breakers are designed with circuitry to initiate a tripping operation to provide selfprotection to the electronic components in the event the internal temperature reaches to an unsafe level.

In addition to ambient temperature, other factors must be taken into account in the application of circuit breakers in system designs. These include altitude, power factor, cable size and type, load types, and others. Additional details on these can be found in Eaton's Consulting Application Guide.

## 100\% Rated Breakers

Molded case circuit breakers are designed to carry rated current in open air at the calibrated temperature for an indefinite period of time without tripping. Molded case circuit breakers are typically applied in an enclosure, therefore the National Electrical Code (Article 220.10b) requires that all overcurrent protection devices be loaded to a maximum of $80 \%$ of their continuous current rating, unless specifically listed for 100\% applications. Breakers listed for $100 \%$ applications specifically outline, on the nameplates, a minimum size enclosure, the minimum ventilation (if needed), and the minimum conductor size for application at $100 \%$ rating.
Power Defense circuit breakers are available in $100 \%$ rated configurations, as presented in each section of the catalog. Power Defense breakers rated for $100 \%$ use the designator PDF in Digits 1-3 of the catalog number.

It is important to understand that using $100 \%$ rated breakers is not always the best choice for every system design. Consideration should be given to any present or future factors that could affect the overall system design, and an understanding of NEC Article 210.20a in application of these products.

## $50^{\circ} \mathrm{C}$ Calibrated Breakers

Special non-UL listed
calibrations are available for $50^{\circ} \mathrm{C}$ ambient temperatures for breakers equipped with thermal-magnetic trip units, and for separate thermalmagnetic trip units. Breakers equipped with electronic trip units can operate reliably in ambient temperatures of $50^{\circ} \mathrm{C}$, and do not require specific calibration.

For this application on thermal-magnetic breakers, the trip unit digits (11-13) of the Power Defense circuit breaker catalog number are changed, from TFF and TFA to VFF and VFA, respectively. Details for these are provided within each frame section.

## Freeze-Tested Circuit Breakers

Power Defense circuit breakers may be ordered with freeze testing for applications in extreme cold conditions. This option uses special lubrication and mechanical operation is verified at $-40^{\circ} \mathrm{C}$.

For this application, add suffix J2 to digits 19-20 on a Power Defense catalog number to order.

## Fungus/Moisture Treated Breakers

Molded case circuit breakers are suited for operation in 0\% to $95 \%$ noncondensing humidity environments. As is the case with all electrical equipment, application in a condition or environment above this humidity level should be avoided. Breakers applied in these environments should be protected by the proper NEMA rated enclosure (or of appropriate IP rating), and maintained dry. If such operating conditions cannot be met, special treatment of the circuit breaker should be considered to minimize the possibility of operational problems.

All Eaton circuit breaker cases are molded from a glasspolyester material, which does not support the growth of fungus. Any parts that are susceptible to the growth of fungus will require special treatment for application in these types of conditions.

For this application, add suffix J1 to digits 19-20 on a Power Defense catalog number to order.

## High Altitude Applications

Low-voltage circuit breakers must be progressively derated for voltage and current carrying capacity at altitudes above approximately 6000 ft . The thinner air at higher altitudes reduces cooling and dielectric characteristics compared to denser air found at lower altitudes.
Please consult the product line, Technical Resources Center, or Eaton's Consulting Application Guide for specific derating details.

Molded Case Circuit Breakers

Power Defense Molded Case Circuit Breakers

## Reverse Fed Applications

All Power Defense molded case circuit breakers shipped complete from Eaton's factory are capable of being reverse fed, with the power source feeding the lower side (typically considered the load side) of the circuit breaker. UL specifies parameters for circuit breakers to be applied in reverse-feed applications, which are met by Power Defense circuit breakers. This typically includes a factory seal and no "Line" or "Load" markings. All Frame Sizes 1 and 2 (PDG1 and PDG2) circuit breakers are always shipped in this configuration.

Breakers that ship as frames only (available in Frame Sizes 3-6), for field installation of trip units, are marked for standard application, with the line side marked at the top and the load side at the bottom, and meet UL requirement for standard applications.

An Eaton facility authorized to modify MCCBs under UL File E7819 may convert a standard circuit breaker of this type to a reverse-feed capable device per UL parameters following specific procedures.
Frame Sizes 1 and 2 always ship complete from the factory and are always reverse-feed capable. Frame Sizes $3,4,5$ and 6 may ship as complete circuit breakers, or as separate frames and trip units if ordered separately.
Motor Circuit Protector devices are not capable of being reverse fed.

# Molded Case Circuit Breakers 

Power Defense Molded Case Circuit Breakers

## Application of Power Defense Molded Case Circuit Breakers in $400-415 \mathrm{~Hz}$ Systems

Some specialty equipment requires $400-415 \mathrm{~Hz}$ power systems. Due to the increased resistance in these systems, circuit breakers typically require derating. Additionally, cable and bus sizes used at $400-415 \mathrm{~Hz}$ are not based on standard National Electrical Code tables for 60 Hz applications, and larger cross sections are necessary.

Eaton's Power Defense molded case circuit breakers can be applied for overcurrent protection on $400-415 \mathrm{~Hz}$ systems. Commonly used to power computer installations, $400-415 \mathrm{~Hz}$ systems are also employed in conjunction with certain aircraft, military and other specialty equipment.

The following application tables contain derating guidelines for applying Eaton molded case circuit breakers on $400-415 \mathrm{~Hz}$ systems.
The Continuous Current table on the next page lists the maximum continuous current carrying capacity at 400 Hz .

The Interrupting Capacities table on V4-T2-133 lists the estimated interrupting capacities at $400-415 \mathrm{~Hz}$.
Due to the increased resistance of the copper sections resulting from the skin effect produced by eddy currents at $400-415 \mathrm{~Hz}$, circuit breakers in many cases require derating.
The thermal derating on these devices is based upon $100 \%$, three-phase application in open air in a maximum of $40^{\circ} \mathrm{C}\left(104{ }^{\circ} \mathrm{F}\right)$ with 4 feet ( 1.2 m ) of the specified cable $75^{\circ} \mathrm{C}\left(167^{\circ} \mathrm{F}\right)$ of bus at the line and load side.

Additional derating of not less than $20 \%$ will be required if the circuit breaker is to be used in an enclosure.

Further derating may be required if the enclosure contains other heat generating devices or if the ambient temperatures exceed $40^{\circ} \mathrm{C}\left(104{ }^{\circ} \mathrm{F}\right)$.

## Cable and Bus Sizing

The cable and bus sizes to be used at $400-415 \mathrm{~Hz}$ are not based on standard National Electrical Code tables for 60 Hz application. Larger cross sections are necessary at $400-415 \mathrm{~Hz}$ to avoid exceeding component temperature limits. All bus bars specified are based upon mounting the bars in the vertical plane to allow maximum air flow. All bus bars are spaced at a minimum of $1 / 4$-inch $(6.35 \mathrm{~mm})$ apart. Mounting of bus bars in the horizontal plane will necessitate additional drafting. Edgewise orientation of the bus may change the maximum ratings indicated.

## Application Recommendations

It is recommended that thermal indicating devices such as "tempiplates" be placed on the line and load terminals or T-connectors of the center pole. These are usually the hottest terminals with a balanced load. A maximum temperature of $90^{\circ} \mathrm{C}\left(50^{\circ} \mathrm{C}\right.$ over a maximum ambient of $40^{\circ} \mathrm{C}$ ) would verify the maximum rating for the application. Temperature profiles taken on these breakers can be correlated to ensure that the hottest points within the breaker are within the required temperature limits. A thermal cutoff switch can also be used to actuate a shunt trip to open the breaker if the thermal limits are exceeded. Consult the Eaton Technical Resource Center for further information on special applications.

## Notes

(1) The above interrupting ratings are estimates based on the design parameters and operating characteristics of each breaker as well as on the limited amount of test data thus far available for circuit breakers applied to $400-415 \mathrm{~Hz}$ systems.
(2) Not UL Listed.

[^0]:    Notes
    (1) 2-pole PD-1 breakers have an accessory pocket compatible with indicating accessory options only.
    (2) All options come with pigtail terminations.

[^1]:    (1) Not available in 4-pole $60 \%$ neutral protection.
    ${ }^{2}$ 2 See tables and descriptions on Page V4-T2-48 for protection type ( $\left.\#_{(1)}\right)$ and available configured options $\left(\#_{(2)}\right)$.

[^2]:    Notes
    (1) DC ratings available in thermal-magnetic breakers only. 250 Vdc is achieved using 2 poles in series.
    ${ }^{2}$ 2) Not available in 4 -pole $60 \%$ neutral protection.
    (3) Molded case switch may open above 6000 A .

[^3]:    Notes
    (1) See tables and descriptions on Page V4-T2-82 for protection type (\#(1)) and available configured options (\#(2)).
    (2) Molded case switch may open above 17,500 A.

[^4]:    Notes
    (1) PXR metering accuracy is $\pm 5 \%$ in 400 Hz application.
    (2) Rear connected Cu T-Bar.
