## F-Frame

## Allowable Accessory Combinations

Different combinations of accessories can be supplied, depending on the types of accessories and the number of poles in the circuit breaker.
Table 45-108. Accessories

Internal Accessories (Only one internal accessory per pole)

| Alarm Lockout Switch (Make Only) | 45-109 | $\square$ |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Alarm Lockout (Make/Break) | 45-109 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  |  |
| Alarm Lockout (2Make/2Break) | 45-109 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  |  |
| Auxiliary Switch (1A, 1B) | 45-112 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  | ■ |
| Auxiliary Switch (2A, 2B) | 45-112 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  | $\square$ |
| Auxiliary Switch and Alarm Switch Combination | 45-114 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  |  |
| Shunt Trip - Standard | 45-116 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  | ■ |
| Shunt Trip - Low Energy | 45-119 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  |  |
| Undervoltage Release Mechanism | 45-120 |  | $\square$ | $\square$ | $\square$ | $\square$ |  |  |  |

## External Accessories

## Modifications (Refer to Eaton)

| Special Calibration | - | $\bullet$ | $\bullet$ | $\bullet$ |
| :--- | :--- | :--- | :--- | :---: | :---: |

| Marine Application | - | $\bullet$ | $\bullet$ | $\bullet$ |
| Applicable in indicated pole position | $\bullet$ | $\bullet$ |  |  |

Alarm Switch

## Alarm Switch

For remote indication of automatic trip operation. Does not function with manual switching; however, it will operate when either a shunt trip or undervoltage release is operated. A "make" contact closes and a "break" contact opens when the alarm/lockout switch operates. The switch automatically resets when the circuit breaker is reset.

Table 45-181. F-Frame Electrical Rating Data (1)(2)

| Maximum <br> Voltage | Frequency | Maximum <br> Current <br> Amperes | Dielectric <br> Withstand <br> Voltage |

(11) Listed with Underwriters Laboratories, for field installation on interchangeable trip unit breakers under E64983.
(2) Standard mounting location.
(B) Standard mounting location - leads exit rear of breaker.
(44) Standard pigtail lead exit location.

## Auxiliary Switch

The Auxiliary Switch provides circuit breaker contact status information by monitoring the position of the molded cross bar which contains the moving contact arms. The auxiliary switch is used for remote indication and interlock system verification, and consists of one or two SPDT switches housed in a plug-in module. Each SPDT switch has one "a" and one "b" contact. When the circuit breaker contacts are open, the "a" contact is open and the " b " contact is closed.
Table 45-190. F-Frame Electrical Rating Data (1) 2

| Maximum <br> Voltage | Frequency | Maximum <br> Current <br> Amperes | Dielectric <br> Withstand <br> Voltage |
| :--- | :--- | :--- | :--- |

## Auxiliary Switch and Alarm Switch Combination

Each Catalog Number listed in Tables 45-199 -45-206 includes one Auxiliary Switch and one Alarm Switch. In an auxiliary switch ASL switch combination, the auxiliary switch is always mounted on the side of the plug-in module next to the center pole of the circuit breaker.

Table 45-199. F-Frame Electrical Rating Data (1)(2)

| Maximum <br> Voltage | Frequency | Maximum <br> Current <br> Amperes | Dielectric <br> Withstand <br> Voltage |
| :--- | :--- | :--- | :--- |

(12) Listed with Underwriters Laboratories for field installation under E64983.
(B) Standard mounting location - leads exit rear of breaker.
(44) Not for use on 4-pole circuit breaker.

## Shunt Trip

The Shunt Trip provides remote controlled tripping of the circuit breaker. The shunt trip consists of an intermittent rated solenoid with a tripping plunger and a cutoff switch assembled to a plug-in module. When required for ground fault protection applications, certain ac rated shunt trips, as noted in the Electrical Rating Table, are suitable for operation at 55 percent of rated voltage.

(10) Not for use on 4-pole circuit breakers.

## Low Energy Shunt Trip

## Low Energy Shunt Trip

Low Energy Shunt Trip devices are designed to operate from low energy output signals from dedicated current sensors typically applied in ground fault protection schemes. However, with a proper control voltage source, they may be applied in place of conventional trip devices for special applications. Flux paths surrounding permanent magnets used in the shunt trip assembly hold a charged spring poised in readiness to operate the circuit breaker trip mechanism.

When a 100 microfarad capacitor charged to 28 Vdc is discharged through the shunt trip coil, the resultant flux opposes the permanent magnet flux field, which releases the stored energy in the spring to trip the circuit breaker. As the circuit breaker resets, the shunt trip reset arm is actuated by the circuit breaker handle, resetting the shunt trip. The plug-in module is mounted in retaining slots in the top of the trip unit. Coil is inter-mittent-rated only. Cutoff provisions required in control circuit.

## Ordering Information

Select shunt trip catalog number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific ac or dc voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

(3) Standard mounting location - leads exit rear of breaker.
(4) For F-Frame HMCP, add an " M " to beginning of catalog number.
(5) For use with thermal-magnetic trip units only.
(6) Breakers with K-Frame OPTIM 550 can only accept accessories in left pole.

## Undervoltage Release Mechanism

The Undervoltage Release Mechanism monitors a voltage (typically a line voltage) and trips the circuit breaker when the voltage falls to between 70 and 35 percent of the solenoid coil rating.

The undervoltage release mechanism consists of a continuous rated solenoid with a plunger and tripping lever mounted in a plug-in module. The tab on the tripping lever resets the undervoltage release mechanism when normal voltage has been restored and the circuit breaker handle is moved to the reset (or OFF) position. With less than pickup voltage applied to the undervoltage release mechanism, the circuit breaker contacts will not touch when a closing operation is attempted.
Note: Undervoltage release mechanism accessories are not designed for, and should not be used as, circuit interlocks.

## Ordering Information

Select handle reset undervoltage release mechanism catalog number for the voltage within the indicated voltage range. Undervoltage release mechanism coils are designed to be applied at specific ac or dc voltages within the voltage range shown on applicable circuit breaker accessory nameplates.

(1) Includes 24 -inch ( 609.6 mm ) external pigtail leads, 18 AWG (16-.010).
(2) A maximum of two internal accessories may be mounted in a 3-pole circuit breaker.
(3) Suitable for mounting in left pole only of 3-pole breaker.

Note: G-frame circuit breakers are factory sealed. Underwriters Laboratories, requires that internal accessories be installed at the factory.
Note: Internal accessories are UL listed for factory installation under E7819.
Note: Where local codes and standards permit and UL listing is not required, internal accessories can be field installed. Accessory installation should be done before the circuit breaker is mounted and connected.

| :--- | :--- | :--- | :--- |
| Control Wire <br> Terminal <br> (Kit of 12) | 5652B38G01 | GCWTK |  |

The Control Wire Terminal Kit provides a means to tap off control power from a main disconnect, using the provided male end of a quick disconnect.
For use with steel or stainless steel terminals only.
Note: Terminal Kits contain one terminal for each pole and one terminal cover.

## F-Frame Ordering Information

Package of 12 control wire terminal tangs. Terminals must be ordered separately. Priced individually.

(2) Individually packed.
(3) Terminal kits contain one terminal for each pole and one terminal cover.

# Circuit Breakers \& Supplementary Protectors <br> External Accessories 

## Multiwire Connectors

Eaton's Cutler-Hammer field-installed multiwire connectors for the load side (OFF) end terminals, are used to distribute the load from the circuit breaker to multiple devices without the use of separate distribution terminal blocks.

Multiwire lug kits include mounting hardware, insulators and tin-plated aluminum connectors to replace three mechanical load lugs. UL listed for copper only as used on the load side (OFF) end.

## Terminal Shields

Terminal Shields provide protection against accidental contact with live line side terminations. Terminal shields are fabricated from high dielectric insulating material and fasten over the front terminal access openings. Small openings in the shields provide limited access to the terminals for tightening connectors. (Field installation only.)

## Terminal Shields and End Covers

Terminal End Covers

## Product Description

The Terminal End Covers are designed for use in motor control center applications where, because of confined spaces, line side conductors are normally custom fitted. The molded end covers are made of high dielectric glass-polyester and slide over the line ends of the circuit breaker. Close fitting conductor openings are molded into the end covers. The end cover and circuit breaker case fit together to form terminal compartments that isolate discharged ionizing gases during circuit breaker tripping. Terminal end covers are available with two conductor opening diameters, 0.25 -inch ( 6.4 mm ) and 0.41 -inch ( 10.4 mm ), and are listed per UL File E7819. (Field installation only.)

## Ordering Information

The terminal end cover is available for 3-pole circuit breakers only. Two conductor opening sizes are available. Specify quantity (one per circuit breaker) when ordering.

Table 45-246. F-Frame Terminal End Covers

| Conductor Opening <br> Diameter in Inches (mm) | Catalog <br> Number | Price <br> U.S. $\$$ |
| :--- | :--- | :--- |
| $0.25(6.35 \mathrm{~mm})$ TEC1  <br> $0.41(10.41 \mathrm{~mm})$ TEC2  l |  |  |

## Interphase Barriers

The interphase barriers provide additional electrical clearance between circuit breaker poles for special termination applications. The barriers are high dielectric insulating plates that are installed in the molded slots between the terminals. (Field installation only.) Two per package.

## Non-Padlockable Handle Block

Non-Padlockable Handle Block

## Product Description

The Non-Padlockable Handle Block secures the circuit breaker handle in either the ON or OFF position. (Trip-free operation allows the circuit breaker to trip when the handle block holds the circuit breaker handle in the ON position.) The device is positioned over the circuit breaker handle and secured by a setscrew to deter accidental operation of the circuit breaker handle. Listed per UL File E7819. (Field installation only.)

Snap-on Padlockable Handle Lock Hasp

Snap-on Padlockable Handle Lock Hasp

## Product Description

The Snap-on Padlockable Handle Lock allows the handle to be locked in the OFF or ON position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) This device was designed for use on the 1-pole circuit breaker, but may be used on 1-, 2-, 3- and 4-pole styles. The handle lock snaps onto the escutcheon area of the handle with an optional retaining screw for added secureness. The handle lock will accommodate shackle. Listed per UL File E7819. (Field installation only.)

## Padlockable Handle Lock Hasp

Padlockable Handle Lock Hasp

## Product Description

The Padlockable Handle Lock Hasp allows the handle to be locked in the ON or OFF position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) The hasp mounts on the circuit breaker cover within the trimline. The cover is predrilled on both sides of the operating handle so that the hasp can be mounted on either side of the handle. The hasp will accommodate up to three padlocks with $1 / 4-$ inch ( 6.4 mm ) shackles, one per circuit breaker. Listed per UL File E7819. (Field installation only.)

## Cylinder Lock

## Product Description

The Cylinder Lock internally blocks the trip bar in the tripped position to prevent the circuit breaker from being switched to ON. The cylinder lock is factory installed in the left pole only of the circuit breaker cover. Other internally mounted accessories cannot be installed in the same pole as the cylinder lock. (Factory installation only.)

## Mechanical Interlocking Devices

## Key Interlock Kit

 (Lock Not Included)

Key Interlock Kit

## Product Description

The Key Interlock is used to externally lock the circuit breaker handle in the OFF position. When the key interlock is locked, an extended deadbolt blocks movement of the circuit breaker handle. Uniquely coded keys are removable only with the deadbolt extended. Each coded key controls a group of circuit breakers for a given specific customer installation.

The key interlock assembly is Underwriters Laboratories listed for field installation under UL File E7819 and consists of a mounting kit and a purchaser supplied deadbolt lock. The mounting kit comprises a mounting plate, which is secured to the circuit breaker cover in either the left- or right-pole position, key interlock mounting screws, and a wire seal. Specific mounting kits are required for individual key interlock types.

## Ordering Information

Key interlock mounting kits are for field installation only. Select mounting kit catalog numbers to match type of lock used. Key interlocks are supplied by customer.

## Sliding Bar Interlock

Sliding Bar Interlock

## Product Description

The Sliding Bar Interlock provides mechanical interlocking between two adjacent 3-pole circuit breakers. It is installed on the enclosure cover between the circuit breakers. When the sliding bar interlock handle is moved from one side to the other, a bar extends to alternately block movement of the circuit breaker handles and prevents both circuit breakers from being switched to ON at the same time. Sliding bar interlocks are not UL listed. (Field installation only.)

## Walking Beam Interlock

Walking Beam Interlock

## Product Description

The Walking Beam Interlock provides mechanical interlocking between two adjacent circuit breakers of the same pole configuration. The walking beam interlock mounts on a bracket behind and between the circuit breakers. A plunger on each end of the beam is inserted through an access hole in the back plate and base of each circuit breaker. The walking beam interlock prevents both circuit breakers from being switched ON at the same time. If a walking beam interlock is installed, the wiring troughs in the back of the circuit breaker case are blocked by the plungers and cannot be used for cross wiring. Factory modified circuit breakers are required for this application. UL File E3816.

## Ordering Information

The sliding bar interlock is available for mounting between two adjacent 3 -pole circuit breakers with circuit breakers centerline spacing as indicated in table and enclosure front panel thickness of $1 / 8$ or $3 / 16$ inch ( 3.2 or 4.8 mm ). (For field installation only.)

## Ordering Information

The walking beam interlock is available for mounting between two adjacent circuit breakers spaced $1 / 4$-inch $(6.4 \mathrm{~mm}$ ) apart and having the same pole configuration. The two circuit breakers must be factory modified to accept the walking beam interlock assembly (suitable for use with either 2-, 3- or 4-pole circuit breakers). With properly modified circuit breakers, the walking beam interlock is suitable for field installation. Order circuit breakers specifying modification for walking beam ( $20 \%$ price adder) and select walking beam interlock from table below. Circuit breakers and walking beam interlock are boxed and shipped separately.

## Electrical Operator

Electrical Operator

Electrical Operator

## Product Description

The Electrical (Solenoid) Operator is a single solenoid mechanism that enables local and remote circuit breaker ON, OFF, and reset switching. The electrical operator is mounted on the circuit breaker cover within the trimline of the circuit breaker. The electrical operator uses a unique bi-stable latch that allows the device to operate using one solenoid. The accessory provides high-speed switching with a maximum operating time of 5 cycles $(80 \mathrm{mS})$, making it suitable for generator synchronizing applications.
Means are provided for remote electrical operation and for local manual operation. A special slide includes provisions for padlocking the circuit breaker handle in the OFF position. The slide will accept three padlock shackles with a maximum diameter of 1/4-inch ( 6.4 mm ) each. An interlock electrically disconnects the solenoid when the electrical operator cover is removed. The Rating Data Tables provide electrical rating data for the electrical (solenoid) operator.
The Electrical (Motor) Operator allows the circuit's breaker to be opened, closed or reset remotely. It also has a lock-off capability and provisions for manual operation.

The Electrical (Motor) Operator contains a reversible motor connected to a ball screw. The ball screw drives the circuit breaker handle. Limit switches and relays are used to control the motor.

## Plug-in Adapters

## Plug-in Adapters

## Product Description

Plug-in Adapters simplify installation and front removal of circuit breakers. Individual line and load plug-in adapters are available for rear connection applications on 2-, 3- and 4-pole circuit breakers. Common mounting plates for line- and load-end adapters are available.
One Plug-in Adapter Kit is required for line-end and one for load-end.

## Rear Connecting Studs

## Product Description

Rear Connecting Studs are available in several sizes to accommodate specific fixed-mounted circuit breaker applications.

Each rear connecting stud assembly consists of one stud and one tube. To maintain proper clearances between poles, select alternate long and short stud assemblies for circuit breakers with more than one pole. One assembly is required for line-end and one for load-end of each pole. Tubes must be ordered separately. Connecting studs are available only with English thread sizes.

## Panelboard Connecting Straps

## Panelboard Connecting Straps

Panelboard Connecting Straps

## Product Description

Panelboard Connecting Straps are used to connect the circuit breaker terminals to the panelboard bus. The panelboard connecting straps are available with various ratings for outside and center poles. (Field installation only.)
Panelboard connecting straps are available to meet the needs of most standard panelboard applications. Style numbers for mounting brackets for CDP panelboard installations are also included.
Refer to panelboard manufacturer for compatibility.

## Handle Mechanisms Overview

Handle Mechanisms are used to operate molded case circuit breakers, molded case switches and motor circuit protectors. They are available in three basic configurations - Flange Mounted, Through-the-Door and Direct (Close-Coupled) - providing safe, dependable operation and ease of installation.

- Flange Mounted:
- Flex Shaft
- C371

■ Through-the-Door:

- Series C Rotary
- Universal Rotary
- Direct (Close-Coupled):
- Universal Direct
- Euro IEC
- G Direct

Handle mechanisms are typically used on enclosed circuit breakers, control panels and motor control centers in many different applications. Eaton has a handle mechanism for virtually any need.

## Flange Mounted Handle Mechanisms

## Product Description

Flange Mounted Handle Mechanisms mount on the flange of an enclosure door. The Flex Shaft ${ }^{\text {TM }}$ is an extra heavy-duty mechanism that includes a flexible shaft in various lengths, 3 feet $(.9 \mathrm{~m})$ through 10 feet ( 3 m ) for use with various size enclosures.
The Flex Shaft Handle will accept up to three padlock shackles, each with a maximum diameter of $3 / 8$-inch ( 9.5 mm ). Can be used with NEMA 1 , 3R and 12 fabricated enclosures. An optional handle is available for Flex Shaft that is suitable for use with NEMA 4 and 4X environments. Flex Shaft comes preset from the factory, requiring only minor field adjustments on installation, which takes about 10 minutes - a significant time savings compared to installation of other types of flange handle mechanisms. The

Flex Shaft mechanism also takes up less interior enclosure space than competitive designs and the handle fits standard flange cutouts. Flex Shaft Handle can be remotely mounted from breaker, where an operator can use it by "funneling" the cable through conduit.

Flex Shaft is UL listed under File E64983 and meets CSA requirements.
The Type C371 Circuit Breaker Operating Mechanisms are designed for installation in control enclosures where main or branch circuit protective devices are required. All circuit breaker mechanisms are suitable for right-hand mounting.
Auxiliary contacts are not available for mounting on operating mechanisms. Where required, have them installed in circuit breaker.
Type C371 is UL listed under File E62635.

Note: Type 4/4X handle mechanisms are available. Add Suffix X to complete catalog number. Add Suffix I to complete catalog number for IEC handle. Original narrow handle design (No C Suffix) is available. Remove C from catalog number.
Note: When selecting the length of shaft, ensure minimum bending radius of 4 inches $(101.6 \mathrm{~mm})$ is maintained to operate properly. The standard method of shipment includes the mechanism preset at the factory; however, minor field adjustments may be required.
Note: Dual breakers operator available on F-Frame only. Only the F, J \& K can mount LH \& RH all other RH only.

(5) Customer: Consult with box manufacturer for correct door hardware and any adapters required for assembly.
(6) The $1 / 4$-inch $\times 1 / 2$-inch ( $6.35 \times 12.7 \mathrm{~mm}$ ) standard mill rectangular locking bar is not supplied with these kits.
(7) Third roller latch for use with 4 - or 6 -inch ( 101.6 or 152.4 mm ) handle when 3 point latching is required.

## Through-the-Door Handle Mechanisms

Eaton's Cutler-Hammer through-thedoor handle mechanisms mount on the front of an enclosure or cabinet door and externally operate the circuit breaker via a variable depth shaft or a linear operator (Type MC). Each rotary type handle mechanism includes a handle, base operating mechanism and shaft that can be cut to various lengths.
Series C Rotary and Universal Rotary handle mechanisms are for use with Molded Case Circuit Breakers (G, F, J, K, L, MDL), Molded Case Switches and Motor Circuit Protectors.

Series C Rotary is suitable for use with NEMA $1,3 R, 12$ and $4 / 4 \mathrm{X}$ enclosure types. Type 4/4X application requires special handle, see "Ordering Information."

The Universal Rotary is suitable for use with NEMA 1 and 12 enclosure types. All rotary handle mechanisms include a handle "Lock Off," to prevent turning the breaker ON while in the OFF position. All rotary handles indicate ON/OFF/Tripped/Reset positions, however, Universal Rotary has the added feature of international markings for ON (I) and OFF (O). Series C Rotary handle is metal. Universal Rotary is made of molded material. Series C Rotary handle is black and Universal Rotary is available in black or yellow/red.
Series C Rotary handle was ergonomically designed with extra clearance for a "gloved hand" to operate. Handle has a $45^{\circ}$ rotation. Universal Rotary has a $90^{\circ}$ rotation ("pipe valve" operation) where ON is vertical and OFF is horizontal. Shafts include a support brace to ensure proper alignment.

In addition, the 16 -inch ( 406.4 mm ) and 24 -inch ( 609.6 mm ) extra long shafts include an adjustable support bracket.

Series C Rotary and Universal Rotary, are UL listed and meet CSA requirements. Universal Rotary also meets IEC947-1/2 for international compliance. Rotary UL File Number is E64983.

[^2]Circuit Breakers \& Supplementary Protectors External Accessories

Type 4/4X handles are similar to standard handles except they include an internal neoprene gasket. Type 4/4X handle style number is 6648 C 22 G 03 . Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

## Series C Rotary Accessories

As an option, an auxiliary switch is offered so that the control panel builder may electrically indicate the status of the breaker. This accessory would be mounted on the mechanism and comes with 24 -inch ( 609.6 mm ) pigtail leads.

## Direct (Close-Coupled) Handle Mechanisms

## Product Description

Direct (Close-Coupled) Handle Mechanisms mount directly to the circuit breaker. They are used in shallow enclosures where the standard variable depth Through-the-Door type mechanism is not practical or cannot be used. They are typically for applications where high volume, standardized enclosures are being fabricated.
The Universal Direct handle mechanism is designed exclusively for the new Cutler-Hammer E125 and J250 circuit breakers by Eaton Corporation. It is available as standard with a door interlock to prevent opening the enclosure while the circuit breaker is in the ON position. It is also available without a door interlock.
The Euro IEC Direct handle mechanism can be used on F-through R-Frames.
The G Direct is available with a black or the yellow handle, and with or without a shroud. It is suitable for use with NEMA 1 enclosures. It is for use only with the G-Frame (GD, GC, GHC, GMCP).

An escutcheon ring and interlock clip are provided as standard. The standard design includes a lock-off feature.
The Universal Direct handle mechanism is UL 489 listed, IEC947-1/2 and meets CSA requirements. The Euro IEC Direct handle mechanism is IEC-240-1. G Direct is UL listed and meets CSA requirements.

## Type LFD Current Limiter

The LFD Current Limiter is an accessory that bolts to the load end of a standard FDB or FD thermal-magnetic circuit breaker, providing 200,000 A interrupting capacity at up to 600 Vac . LFD current limiters for thermalmagnetic circuit breakers are listed with Underwriters Laboratories under File E47239.

Table 45-301. Type LFD Current Limiter

| Circuit Breaker <br> Rating Amperes | Catalog <br> Number | Price <br> U.S. \$ |
| :--- | :--- | :--- |
| $15-70$ LFD3070R  <br> $80-160$ LFD3150R  |  |  |

## Ground Fault Alarm Unit

The Ground Fault Alarm Unit is a remotely mounted device with a combination indicating light/test button that will light when the breaker trips or alarms on ground fault. The Ground Fault Alarm Unit requires a separate 120 Vac power source to power the light and the internal relay which has 1 NO and 1 NC contacts for remote indication. The Ground Fault Alarm Unit can be panel mounted for ordering with an optional face mounting bracket. For use on Digitrip 310 only, K- through N-Frame.

| :--- | :--- | :--- |
| Ground Fault <br> Alarm Unit GFAU  <br> Face Mounting <br> Bracket 1264C67G01  |  |  |

## IO Energy Sentinel

The IO Energy Sentinel is a highly accurate, microprocessor-based, breaker-mounted device designed to monitor power and energy readings. It represents an alternative to watt meters, watt-hour meters, and watt demand meters. Key advantages include savings in space, lower installation costs, and remote monitoring capability.

The IQ Energy Sentinel mounts on the load side of a Series C F-Frame (150 ampere) circuit breaker. It can be applied on 3-phase, 4 -wire systems, or single-phase, 3 -wire systems with voltage connected through phases A and C .

For more information, see Descriptive Bulletin 8178.

Potential Transformer Module

The Potential Transformer Module is required for the Digitrip OPTIM 1050 to provide a voltage input to allow the trip unit to monitor power and energy as well as power factor. The Potential Transformer Module is a 6 VA transformer with a primary voltage input of up to 600 volt line to line. Three 0.1 ampere fuses are provided on the primary of the transformer and can be used for isolation purposes during dielectric testing. The device is normally panel mounted and can feed up to 16 OPTIM trip units.

## Solid-State (Electronic) Portable Test Kit

The Solid-State (Electronic) Portable Test Kit provides verification of performance of all ratings of Digitrip 310 electronic trip units installed in circuit breakers while in service under varying load and/or phase imbalance. The test kit operates on 120 -volt, $50 / 60 \mathrm{~Hz}$ power; it includes complete instructions and test times for testing long time, short time/instantaneous operation and optional ground fault operation of the circuit breaker.

| Description | Catalog <br> Number | Price <br> U.S. \$ |
| :--- | :--- | :--- |
| Solid-State (Electronic) <br> Portable Test Kit | STK2 |  |

## Breaker Interface Module (BIM)

The Breaker Interface Module (BIM) is a panel mounted user interface device that is mounted on the front of an electrical assembly or at a remote location. The BIM is used to access, configure, test and display information for OPTIM trip units and other devices. The BIM consists of four display windows, eight function buttons, 18 LEDs, and a graphical time/current curve to provide breaker status, operational information, protection status and energy monitoring. A 24 Vdc power supply is required to provide power to the BIM. This is supplied by the switchboard builder to Eaton's specifications. The BIM is a member of Eaton's Cutler-Hammer PowerNet family of communicating devices that connects OPTIM trip units, Digitrip RMS 810/910 trip units and energy sentinels as a subnetwork system. The BIM can also be connected to a main network via a PONI module to PowerNet software.

## Digitrip OPTIMizer

The Digitrip OPTIMizer is a hand-held programmer that is used to access, configure, test and display information from OPTIM trip units. The OPTIMizer plugs into the front of an OPTIM trip unit via an eight-pin telephone jack and is powered by a nine-volt battery or the auxiliary power module. One highlighted feature is the "Copy" and "Download" commands. Setting up multiple OPTIM trips can be finished in minutes and with no errors. An Auxiliary Power Module connection provides a trip test when control power is not present at the breaker. The OPTIMizer is supplied as a standard package to include the programmer, the eight-pin connection cord, battery and carrying case. The Auxiliary Power Module is optional.

| Catalog <br> Number | Price <br> U.S. \$ |
| :--- | :--- |
| OPTIMizer - Standard Package |  |

## Note: $\mathbf{2 4}$ Vdc Power Supply

A 24 Vdc power supply is required for all Digitrip OPTIM trip units that are required to communicate either on the main Eaton's Cutler-Hammer PowerNet network or as a subnetwork to a BIM. The breaker's load is 45 mA of current. Typically one power supply is required per switchboard and can provide control power to a BIM and the OPTIM trip units. The 24 Vdc power supply should be an "isolated high quality" power supply with a "CE" label, and is normally provided by the switchboard manufacturer to Eaton's recommendations.

## Auxiliary Power Module

The Auxiliary Power Module is a power supply requiring 120 Vac input at 50 or 60 Hz that provides a 32 Vdc output. The Auxiliary Power Module provides control power for testing an OPTIM trip unit when other means of control power is not available or for continuous OPTIMizer operation versus temporary with a battery. The Auxiliary Power Module connects into the top of the Digitrip OPTIMizer via a keyed receptacle. The main application for the Auxiliary Power Module would be for the testing of a stand-alone non-communicating OPTIM breaker that ordinarily would not have control power.
Note: The OPTIMizer can work off of 32 Vdc control power, although 24 Vdc is the standard on OPTIM breakers.
