The Cutler-Hammer® 200 Series by Eaton's electrical business is an easy to use Zero Pressure Accumulation (ZPA) sensing and control solution. This sensor system solves the problem of product damage and mishandling caused by mechanical sensor rollers on outdated ZPA conveyors.

A Complete, Pre-engineered Solution

The 200 Series comes complete with all needed components including sensors, pre-measured cables, power supplies, and accessories. These components simply snap together to provide reliable Zero Pressure Accumulation conveyor control without the need to invest costly engineering time in a PLC-based system. The compact power supply, designed specifically for the 200 Series, includes an integral junction box to eliminate additional mounting enclosures.

For the most current information on this product, visit our web site: www.EatonElectrical.com

A Fully Engineered Non-contact, Photoelectric Sensor System with Built-In Accumulation Control**Product Features**

- Non-contact, true Zero Pressure Accumulation control without a PLC
- Multiple algorithms available to provide the exact functionality you require
- Additional Gap and Compression timing versions available
- Low installation costs with pre-measured and connectorized wiring
- Fits zone lengths between 18 and 60 inches in 6-inch increments and conveyors up to 60 inches wide
- Compatible with commonly available solenoid-operated air valves
- Sensors are short circuit protected with automatic reset of sensor when short is removed
- System designed with sub-4A 24V DC wiring for safety and reduced costs
- Easily interfaced to external control systems for singulated discharge and/or slug release
- Highly optimized, low-cost power supply
- Custom brackets and sensor/bracket assemblies available

Fast, Low Cost Installation and Retrofit

The unique 200 Series reduces installation costs by eliminating measuring, wire stripping and attachment of custom connectors. The main buss cable has connectors pre-installed at points to match your conveyor zone length. Zone length can be from 18 to 60 inches in 6-inch increments. Custom wiring harnesses are supplied for an exact fit-between the main buss cable, the

solenoid, and the sensor to eliminate unsightly cable loops that might otherwise be snagged and damaged.

High Reliability

200 Series sensors operate in the polarized reflex sensing mode. Polarized sensors eliminate detection errors caused by shiny targets. The sensor's 10 foot maximum range provides high sensing reliability when used at common conveyor widths.

For Customer Service in the U.S. call 1-877-ETN CARE (386-2273),

call 1-800-426-9184.

Choose a Sensor to Meet Your Specific Needs

To provide an ideal solution for a wide variety of zero-pressure accumulation needs, 200 Series sensors are available in two different embedded logic modes:

- The Basic Logic Series offers high-throughput smart Zero Pressure Accumulation control. This logic results in singulation and Zero Pressure Accumulation. Each sensor checks the status of the downstream zone and each zone always runs except when both the current and downstream zones are full. Models are available in either Zone Full Delay Timer or Zone Empty Timer configurations.
- The Progressive Logic Series offers even higher throughput than the Basic Logic. This logic does not singulate product, but does result in Zero Pressure Accumulation. Each zone always runs until all of the zones downstream are full, allowing maximum efficiency. Models are available in either Zone Full Delay Timer or Zone Empty Timer configurations.

It's So Easy to Get Started, All That's Needed Is:

- Your conveyor zone length(s)
- Preferred ZPA algorithm
- Sensor harness cable lengths:
 - Distance from sensor to power buss harness
 - Distance from sensor to solenoid
- Solenoid valve manufacturer and model number

200 Series System Components

Sensor

The 200 Series sensor has been specially designed with upstream communication abilities and internal logic to implement true zero pressure accumulation control. When combined with the components below, a complete ZPA conveyor control system can be literally snapped into place on your conveyor. Two versions are available depending upon the control you require: Basic Logic and Progressive Logic (described above).

Sensor with Additional Time Delay

These 200 Series sensors are the same as standard units in all respects, with the exception of additional time delay circuitry designed to afford you enhanced zero pressure accumulation control. Versions with a "Gap Timer" offer you an adjustable delay to insert additional gaps between adjacent products as they move down the conveyor (beyond those gaps normally present due to the operation of the built-in true zero pressure accumulation logic). Versions with a "Compression Timer" offer you an adjustable delay to compress packages together during the accumulation process.

Sensor Harness

The Sensor Harness connects the sensor to the Buss Harness and solenoid.^① This is the only custom part of the system — the length is optimized for an exact fit on your conveyor to eliminate cable loops that could otherwise be damaged.

Buss Harness

The Buss Harness distributes power, slug release signals and provides communications links. Made from flat ribbon cable, it is available in 10, 50 and 100 foot lengths and is connectorized at intervals to match your zone length (18 to 60 inches in 6-inch increments).

^① A customer-supplied solenoid/valve is required at each zone to control the conveyor pneumatics. Eaton recommends a solenoid below 1.8 Watts.

Wiring Diagram

Optical Performance

All optical specifications are guaranteed to be the minimum performance under clean conditions of any product delivered from stock. Typical performance may be higher.

Dirt in the environment will affect optical performance by reducing the amount of light the control receives. For best results, sensors should be used at distances where excess gain is higher than 1.5 (1.5 times the amount of sensing power required to detect an object under ideal conditions). Higher excess gain will allow the sensor to overcome higher levels of contamination on the lens. All ranges and excess gain graphs are based on a 3-inch retroreflector.

Maximum Range	10 feet
Optimum Range	0.1 to 8 feet
Field of View	3 inch diameter at 12 feet

August 2007

Typical Wiring Example — Nominal 50' and 100' Buss Harness Lengths

Approximate Dimensions in Inches (mm) Except Where Noted

Specifications — 14266 and 14286 Models

Description	Specification
Input Voltage	18 to 30V DC, reverse polarity protected
Power Dissipation	250 mW maximum
Output Type	NPN or PNP
Current Switching Capacity	100 mA maximum
OFF-State Leakage	10 mA maximum
ON-State Voltage Drop	2.5V at 100 mA
Slug Input	NPN: Integral diode isolates slug input; Input is protected against mis-wiring and is active from "0" to a voltage level equal to the current "input voltage" minus 6 volts PNP: Integral diode isolates slug input; Input is protected against mis-wiring and is active from 1 – 30V DC
Response Time	8 mS
Connector	5-pin, works with mating plug AMP #104257-4; 2-pin, works with mating plug AMP #104257-1
Temperature Range	Operating: -25° to 55°C (-13° to 131°F) Storage: -25° to 70°C (-13° to 158°F)
Material of Construction	Lens: Polycarbonate Body: Cyclopol and Lexan Connector: Glass-filled PCT
Vibration and Shock	Vibration: 30 g over 10 Hz to 2 kHz Shock: 30 g for 10 mS 1/2 sinewave pulse
Enclosure Ratings	NEMA 1
Cable-Pull Strength	20 pounds (static)
Approvals	Contact factory for latest list of agency approvals
Short-Circuit Protection	The Output is protected against dead shorts only. Operation: Output is continuously retried at 3 mS intervals and will automatically reset when short is removed (no visual indication of a short-circuit condition). CAUTION: will not protect against overloads between 100 – 300 mA
Indicator LED	Lights steady when output is ON; OFF when output is OFF; OFF when output is in short-circuit mode

The standard sensors in this section are similar to the embedded logic sensors in the previous sections except that the units do not contain on-board ZPA logic, the sensors directly actuate the solenoid valves to which they are connected.
