

# Data sheet

# **ELIMINATOR® Hermetic receiver filter drier** Types DMC and DCC

Features

### The Core Type DMC

•

- 100% Molecular Sieve core
- High drying capacity minimizing the risk of acid formation (hydrolysis)
- Recommended for use with HFO, HC, HFC and HCFC refrigerants
- Will not deplete oil additives

### The Core Type DCC

- 80% Molecular Sieve with 20% activated alumina
- Recommended for use with HFO, HC, HFC and HCFC refrigerants
- Perfect core blend for A/C systems that operate at high condensing temperatures and require high drying capacity

DMC and DCC are combined receivers and filter driers for use in small hermetic refrigeration systems.

Under operating conditions where the condenser cannot contain the total quantity of refrigerant, a receiver might be necessary. This extra receiver capacity can be provided by using a DCC or a DMC combined receiver and filter drier.

There are two types of ELIMINATOR<sup>®</sup> cores. Type DMC driers have a core composition of 100% Molecular Sieve, while type DCC contain 80% Molecular Sieve with 20% activated alumina.

ELIMINATOR® type DMC driers are designed for applications requiring the highest moisture capacity.

ELIMINATOR® type DCC driers are designed for applications requiring high moisture capacity and acid adsorption capacity.

Available with solder (cu-plated steel) connections.

### The Shell

- PED/UL approved for PS 42 bar
- Available with solder
- (cu-plated steel connectors)
- · Corrosion resistant powder-painted finish

### **The Filter**

- Combination of filter drier and receiver
- Available in sizes 4 40 cubic inches
- High drying capacity at high and low liquid temperatures
- Space-saving
- Fast installation
- 25  $\mu m$  (0.001 in.) filter provides high retention with minimal pressure drop
- Thermally stable up to 120 °C

### Approvals

UL US, file no. SA 6398 PED 97/23/EC - a3p3 Compliant with ATEX hazard zone 2

**Note:** Only solder versions (cu-plated / pure copper) and connection sizes below 25 mm are approved for flammable refrigerants now.

**Technical data**

### Selection

### Type selection is made considering the application

	<u></u>												
Refr	igerant and oil types	DCC	DMC										
	HFO	Recommended	Recommended										
Defiinement	HC <sup>1</sup> )	Recommended	Recommended										
Refrigerant	HFC	Recommended	Recommended										
	HCFC	Recommended	Recommended										
	Mineral or AB	Recommended	Recommended										
Oil	POE or PAG, pure	Recommended	Recommended										
	POE or PAG, with additives	Not recommended <sup>2</sup> )	Recommended										

<sup>1</sup>) Only solder versions (cu-plated / pure copper) and connection sizes below 25 mm are approved for flammable refrigerants now

c. Result

<sup>2</sup>) DCC Hermetic filter driers contain activated alumina, which is a polar material used for acid adsorption. Many oil additives are also polar substances and can be adsorbed by the activated alumina, rendering them useless, and reducing the drier's acid capacity, though this is not harmful to the system

# Selection example

Select the appropriate type (DMC or DCC) based on refrigerant and oil type. Then select the drier size based on the adsorption and liquid capacity required.

- a. Amount of charge: 4 kg R134a at tL = 24 °C To dry 4 kg R134a at 24 °C from 1050 to 60 ppm moisture, a DMC 20 is necessary
- b. Cooling capacity: Qe = 15 kW To obtain a mass flow corresponding to 15 kW cooling capacity with a DMC 0 filter drier, a  $3/_8$ inch connection must be chosen. Larger connections can be chosen in accordance with the liquid line dimension

DMC 2033s or DMC 2034s can be used

If the initial moisture content is very small or a planned change of the filter drier is considered, a smaller filter drier size can be chosen. During selection consider amount of the refrigerant intended to keep in a reciever part of the filter.
