Typical Application

Intelligent Layer 2 Flat IP Network Surveillance System

Each intersection is deployed with four PZT cameras (each respectively pointing north, south, east and west). Three DYMEC switches supply channels with images and videos to three HDTV monitors. Video and Data is reliably transmitted over the network to the intersection via Gigabit optical fiber. The DYMEC switch aggregates and transmits traffic lights control details, environmental monitoring data and video data to the control branch through optical fiber. Such data are finally sent to the traffic control and maintenance center via the core network.
