## Warning- Each electrical rating is an individual maximum and cannot be exceeded

${ }^{1}$ Configuration with actuator away from the switch
${ }^{2}$ Proximity of ferrous materials usually reduces sense range - typically by $50 \%$. The shape and type of material cause a wide diversity of effects. Testing is required to determine actual sense range for specific applications. As measured on a nonferrous surface.
Gap distances are nominal make distance $\pm 20 \%$. Gap Specifications are for switch to make. Break distance is approximately 1.1 to 1.5 times make.
