

Actuators for safety switches NX/TX

- ▶ Actuators made of stainless steel
- ▶ Two stainless safety screws per actuator
- ▶ With rubber bush

Straight actuator

The straight actuator is used on sliding doors or hinged doors with door radii greater than 300 mm. Safety screws prevent unscrewing of the actuator.

Actuator with overtravel

- ▶ **2 mm** for doors with normal play
- ▶ **7 mm** for doors with large play (optional)

Actuators with rubber bushings

For flexible mounting of the actuator.

Hinged actuator

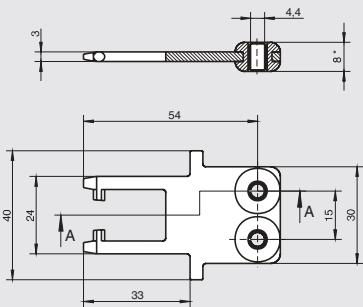

For door radii less than 300 mm a hinged actuator should be used. The spring action movement of the actuator prevents damage due to the actuator jamming in the actuating head. Depending on the movement of the safety guard, the actuator must be selected for left/right or top/bottom.

Screws made of stainless steel

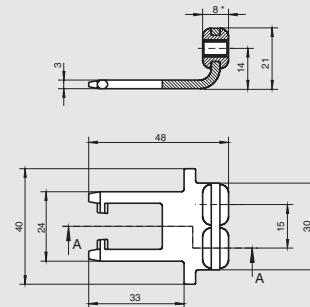

The safety screws included can be inserted with a normal tool, but cannot be removed again.

Mounting plates EMP for safety switches TX

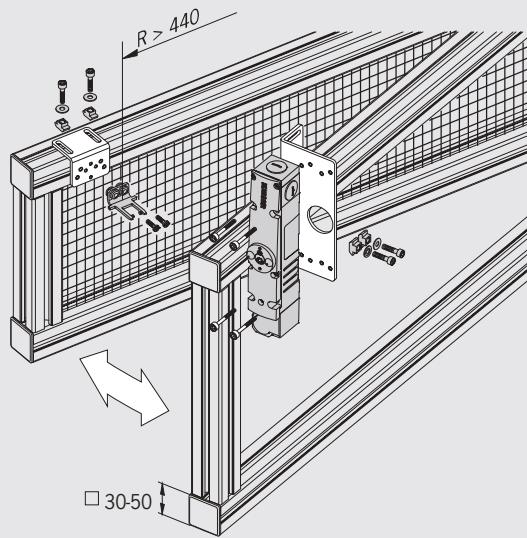

► For vertical mounting of safety switch TX

The mounting plates are used for fastening safety switches TX and actuators to safety guards. The safety switches can be attached vertically.

Note

- Mounting plate material: St37 galvanized
- The mounting plate EMP-SB is also suitable for the safety switches TX...C1991 with escape release from the rear.

Miscellaneous accessories

- ▶ Lockout bar
- ▶ Insertion funnel

Lockout bar

With the safety door open, can be slid into the actuating head on a switch with separate actuator instead of an actuator. Removal can be prevented using a commercially available padlock. For the protection of people in areas with a possible hazard.

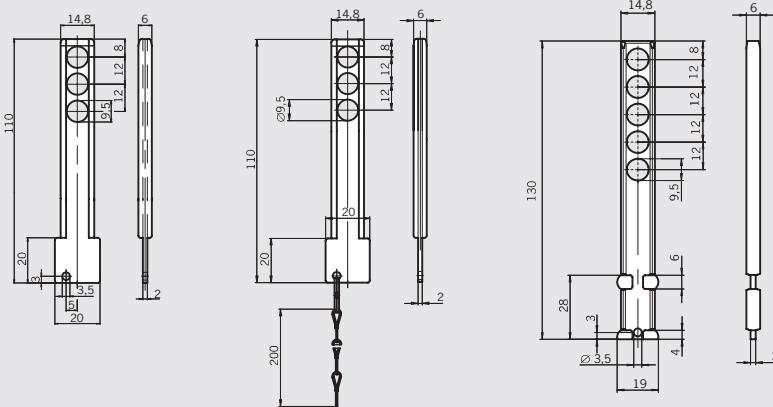

Cannot be used in combination with the protective plate.

Insertion funnel

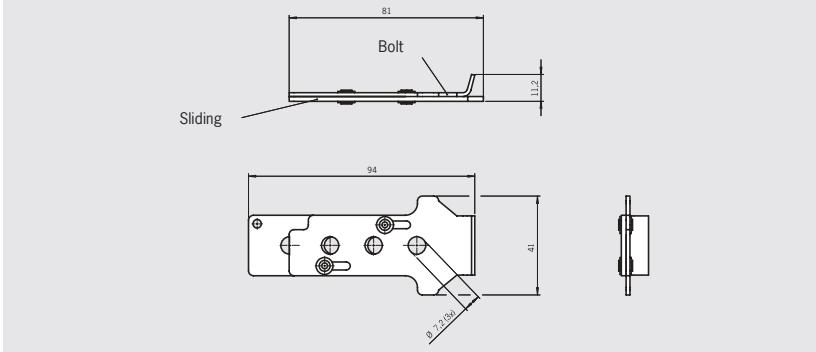

If an insertion funnel is used, even inexactly positioned actuators are inserted reliably in the actuating head due to the large opening aperture, thus protecting the safety switch against mechanical influences.

Miscellaneous accessories

- ▶ Emergency unlocking with manual return for safety switches TX
- ▶ Emergency unlocking with automatic return for safety switches TX
- ▶ Lock for emergency unlocking with manual return for safety switches TX

Emergency unlocking

Is used for the manual release of the guard locking without tools. The emergency unlocking mechanism must be returned to the locked state manually. A sealing wire can be fitted to protect against tampering.

Attention: Prior to mounting, the locking screw for the mechanical release must be removed.

Lockout bar

Is used for the manual release of the guard locking. The integrated spring automatically returns the emergency unlocking to the locked state. A sealing wire can be fitted to protect against tampering.

Attention: Prior to mounting, the locking screw for the mechanical release must be removed.

Lock

The lock is used in combination with safety switch TX. The mechanical key release enables authorized personnel to actuate the mechanical release using the related key in certain situations. The unlocking mechanism holds the solenoid in the "unlocked" position.

Two screws are used to fix the lock to the cover of the safety switch TX (above the mechanical release).

Attention: Prior to mounting, the locking screw for the mechanical release must be removed.

- ▶ Please order safety switch TX separately
- ▶ 2 keys are included
- ▶ Every safety switch of series TX can be upgraded to include a lock

Bolts for safety guards

- ▶ For safety switches TX and NX
- ▶ For right or left hinged doors

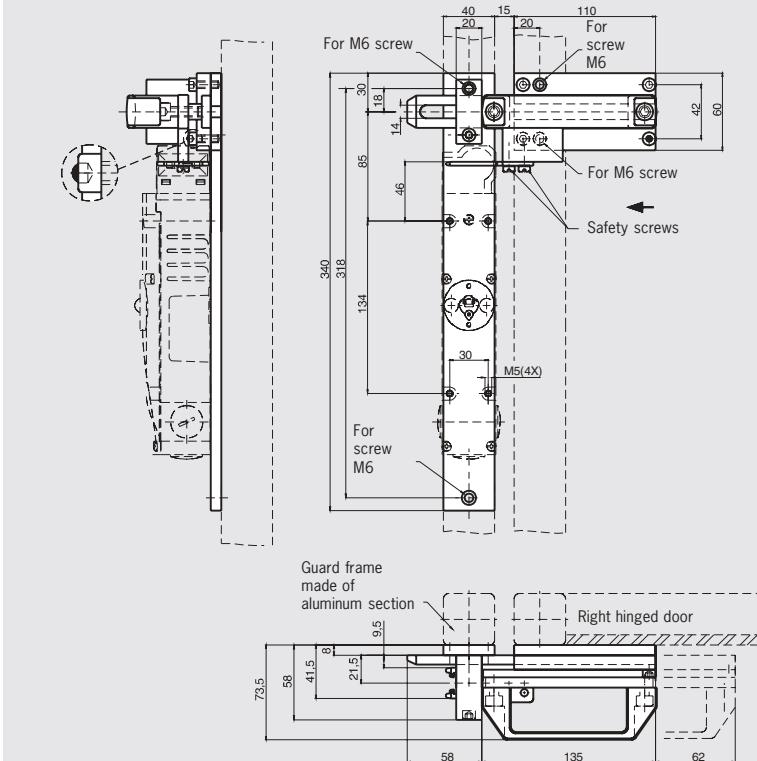

Features

- ▶ Easily fitted to standard aluminum profiles and machine covers by screw connection
- ▶ Distinctive yellow color for easy recognition
- ▶ No additional door handle necessary
- ▶ Slot on the bolt tongue permits attachment of padlocks
