

Eurotherm

Helps Improve Process Efficiency, Product Quality, and Minimize Waste

3200 Series Temperature/Process Controllers

The innovative range of 3200 controllers offer precision control of temperature and other process variables together with many advanced features not normally found in this class of controller.

Product at a Glance -

The emphasis is on ease of use. A simple "Quick Start" code is used to configure all the functions essential for controlling your process. This includes input sensor type, measurement range, control options, and alarms, making "Out the Box" operation truly achievable. In operator mode, every parameter has a scrolling text message describing its function and is available in English, German, French, Spanish or Italian. More advanced features are configured using Eurotherm iTools, a PC-based configuration wizard which is an easy to use and instructive guide to all the functions in the controller.

Heater Current Monitoring

A current transformer input provides display of the heater current and a health check on the load. Partial load failure, heater open circuit and SSR detected faults are displayed as scrolling alarm messages as well as providing an alarm output. On the 3208 and 3204 a front panel ammeter displays the heater current.

Setpoint Programmer

Heat treatment profiles can be programmed using the 8-segment programmer. Holdback ("guaranteed soak") can be used at the beginning of each segment. A digital event output can be triggered in any segment to initiate actions within the process.

Custom Text Messaging

Custom messages can be created with Eurotherm iTools and downloaded to the 3200 controller to display when an event, alarm or process condition occurs. This provides the operator with good visibility of the status of the process.

- 8 Segment programmer
- Heater failure detection
- Current monitoring
- Internal timer
- Scrolling text messages
- Recipes
- Modbus comms
- Modbus SP retransmission
- Analog retransmission
- Remote setpoint
- Help text
- Type approved to EN14597 TR, EAC (CUTR), CCC (Exempt)
- Multi-language support (English, French, German, Spanish, and Italian)

3200 Series Temperature/Process Controllers Specification

Remote Setpoint

An option exists for the 3200 controller to have a Remote Analog Input. This can be either volts or mA and is used to allow the setpoint to be generated by a master controller or PLC.

Recipes

Using Eurotherm iTools, recipes can be created that may be used to change the operating parameters of the 3200 controller simply by selecting a new recipe using the HMI or digital input. This is very useful where multiple products are processed using the same controller but require different parameters to be set.

Timer

An internal timer is configurable as an interval timer, delay timer, or to provide a soft start for hot runner control.

Setpoint Retransmission

Sending the setpoint or other parameters from the 3200 controller to slave devices can be achieved either using conventional analog communications or using Master Modbus communications. Master Modbus in the 3200 controller allows a broadcast of a single parameter to the network.

A typical application is a setpoint being retransmitted to a number of slave controllers in a multi-zone furnace.

Modbus Communications

All units support both EIA232 and 2-wire EIA485 communications using the Modbus protocol. The 3216 supports 4-wire EIA485.

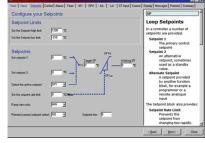

Configuration Adaptor

Eurotherm iTools configuration to all 3200 controllers can be achieved by using a USB configuration adaptor. It provides Eurotherm iTools with the ability to communicate with and configure devices without the need for any power being connected.

Eurotherm iTools Wizard

Used to simplify the set up of 3200 series controllers. The wizard guides the user through the configuration process with interactive help and graphical demonstrations of features.

Process Variable Input	
Calibration accuracy:	$<\pm0.25\%$ of reading $\pm1LSD$ (Note 1)
Sample rate:	4 Hz (250 ms)
Isolation:	264 V AC double insulation from the PSU and communication
Resolution (µV):	$< 0.5 \mu\text{V}$ with 1.6 sec filter
Resolution (effective bits):	>17 bits
Linearisation accuracy:	< 0.1% of reading
Drift with temperature:	<50 ppm (typical) <100 ppm (worst case)
Common mode rejection:	48-62 Hz, >-120 db
Series mode rejection: Input impedance:	48-62 Hz, >-93 dB 100 MΩ
Cold junction compensation:	>30:1 rejection of ambient change
External cold junction:	Reference of 0° C
Cold junction accuracy:	<±1° C at 25° C ambient
Linear(process) input range:	-10 to 80 mV, 0 to 10 V with 100 KΩ/806 Ω external divider module
Thermocouple types:	K, J, N, R, S, B, L, T, C, custom download (Note
	2)
Resistance thermometer types:	
Bulb current:	0.2 mA
Lead compensation: Input filter:	No compensation error for 22 Ω in all leads Off to 59.9 s
Zero offset:	User adjustable over full range
User calibration:	2-point gain & offset
AA Relay	
Type: Rating:	Form C (changeover) Min 100 mA @ 12 V DC, max 2 A @ 264 V AC
	resistive
Functions:	Control outputs, alarms, events
Current Transformer Input	
Input range:	0-50 mA rms, 48/62 Hz
	10 Ω burden resistor fitted inside module
Calibration accuracy:	<1% of reading (typical),
Isolation:	<4% of reading (worst case) By using external CT
Input impedance:	<20 Ω
Measurement scaling:	10, 25, 50 or 100 Amps
Functions:	Partial load failure, SSR detected fault
Digital Input (DigIn A/B, B	not on 3216)
Contact closure:	Open >600 Ω, closed <300 Ω
Input current:	<13 mA
Isolation:	None from PV or system 264 V AC double insulated from PSU and

OP1, OP2 Rating: Accuracy:

0-20 mA into <500 Ω \pm (<1% of Reading + <100 $\mu A)$

Resolution:	13.5 bits
Isolation:	264 V AC double insulated from PSU and comms Module code C provides full 264 V AC double isolated
Functions:	Control outputs, retransmission
OP 3 (not on 3216)	
Rating:	0-20 mA into <500 Ω
Accuracy: Resolution:	±(<0.25% of Reading + <50 μA) 13.6 bits
Isolation:	264 V AC double insulated
Functions:	Control outputs, retransmission
Remote Setpoint Input	
Calibration accuracy:	<±0.25% or reading ±1LSD
Sample rate: Isolation:	4 Hz (250 ms) 264 V AC double insulation from instrument
Resolution:	$<0.5 \text{ mV}$ (for 0-10 V) or $<2 \ \mu\text{A}$ (for 4-20 mA)
Resolution (effective bits):	>14 bits
Drift with temperature:	<50 ppm (typical) <150 ppm (worst case)
Common mode refection: Series mode rejection:	48-62 Hz, >-120 dB 48-62 Hz, >-90 dB
Input impedance:	Voltage: 223 K Ω and Current: 2R49
Normal input range: 0	to 10 V and 4 to 20 mA
Max input range:	–1 V to 11 V and 3.36 mA to 20.96 mA
Software Features	
Control	
Number of loops: Loop update:	1 250ms
Control types:	PID, ON/OFF, VP
Cooling types:	Linear, fan, oil, water
Modes: Overshoot inhibition:	Auto, manual, standby, forced manual High, low
Alarms	nigii, iow
Number:	4
Type:	Absolute high & low, deviation high, low or band,
	rate of change
Latching: Output assignment:	Auto or manual latching, non-latching, event only Up to 4 conditions can be assigned to one O/P
Other Status Outputs	
Functions:	Including sensor break, manual mode, timer status,
	loop break, heater diagnostics, program event
Output assignment:	Up to 4 conditions can be assigned to one O/P
Setpoint Programmer	
Program function:	1 program x 8 segments with 1 event output (Note 4)
Start mode: Power fail recovery:	Servo from PV or SP Continue at SP or Ramp back from PV
Guaranteed soak:	Inhibits dwell timing until PV within limits
Timer	
Modes:	Dwell when setpoint reached
	Delayed control action
	Soft start limits power below PV threshold
Current Monitor	
Alarm types:	Partial load failure, over current, SSR short circuit, SSR open circuit
Indication type:	Numerical or ammeter
Custom Messages	
Number:	15 scrolling text messages
No of characters: Languages:	127 characters per message max English, German, French, Spanish, Italian
Selection:	Active on any parameter status using conditional
Desires	command
Recipes	E regine with 20 paratety
Number: Selection:	5 recipes with 38 parameters HMI interface, communications or digital I/O
Notes	
4 0 11 11	

- 1. Calibration accuracy quoted over full ambient operating range and for all input linearization types.
- 2. Contact Eurotherm for details of availability of custom downloads for alternative sensors.
- 3. Voltage output can be achieved by external adaptor.
- 4. By using recipes five SP programs can be stored.
