

Motor Run Capacitors - Gem III

370 and 440 Volts AC

This capacitor series is designed specifically for motor run applications where the capacitors are used in conjunction with permanent split capacitor type motors. They may be used on either 50 or 60 Hertz systems but should not be used at higher frequencies or in applications where higher frequency harmonics are present. For those types of applications the General Purpose ac Capacitors shown on the following pages should be used. If there is any question regarding the correct application of these products, please contact your GE sales representative.

SPECIFICATIONS:

Available Capacitance Range:	2 to 120 μ F
Capacitance Tolerance:	$\pm$ 6%
Capacitance Variation with Temperature:	See chart M-3 on pg.9
Rated Voltage:	See Ratings Tables. Rating is the 50/60 Hz RMS voltage for a sinusoidal waveform.
Leakage Current:	30 μ A maximum
Frequency:	50/60 Hz. For higher frequencies use the General Purpose AC Capacitor Series.
Operating Temperature:	-40 °C to +70 °C
Storage Temperature:	-40 °C to +90 °C
Operating Life:	60,000 hours with 94% survival
Dissipation Factor:	0.1% maximum
Case Material/Finish:	Unpainted Aluminum case, terne plate steel cover. Contact GE if material/finish to meet UL outdoor standards is required.
Terminations:	0.250" x 0.031" quick connect blades
Dielectric Fluid:	Dielektrol VI
Internal Protection:	UL recognized Pressure Sensitive Interrupter. See Ratings Table for GE's UL Code Number listed under GE's UL File E7793(N). For UL submittals with these capacitors use the GE 'Pxxx' number not the Catalog Number. The corresponding generic UL designation that includes the Available Fault Current (AFC) rating is given below. All these capacitors are capable of interrupting available fault currents of up to 10,000 amperes.
