## Series CA Auxiliary Switch and Bell Alarm

## Applications

-Commercial
-Industrial

## Features

-Common for all MCBs
-Can be coupled on both sides of MCBs
-Gold contact version available for low current and low voltage applications
-Stack up to four CA on left and right sides
-Permits the pass-through of busbars, pin and fork, top and bottom, by changing the position of the base of the auxiliaries

## Performance

| Change-over contacts | 1 Form C |
| :--- | :---: |
| Rate current $\ln (\mathrm{A})$ | 5 |
| Rated voltage AC Un $(\mathrm{V})$ | 240 |
| Electrical endurance | 10000 |
| Terminal capacity flexible/rigid cable $\left(\mathrm{mm}^{2}\right)$ | 2.5 |
| Weight $(\mathrm{g})$ | 70 |

## Functions

Auxiliary contacts are units to be added on to protection devices They allow information about the status of the protection device to be monitored from a distance.

Auxiliary contact CA H (function H) reports the OPEN/CLOSED status.
CA S/H or CA S/H G act as either an auxiliary contact (function H) or a signal contact (function S ). The user can set the function at the time of installation. When used as a signal contact, it reports information about the automatic tripping of the protection devices. A test button on the front simulates functions H or S . There are also a reset button for the contacts (function S ) and a tripping signal (function S).

## Features

-Common for all MCBs
-Can be coupled on both sides of MCBs
-There are two change-over contacts - the upper one features changeable function S/H
$-\mathrm{CB} \mathrm{SH} / \mathrm{HH}-\mathrm{R}$ couples to the right side of the protection devices;
CB SH/HH-L couple to the left
-No stack-on possibilities (only one auxiliary)
-No busbar pass-through facilities

| Weight $(\mathrm{g})$ | 80 |

## Functions

The bottom auxiliary contact (function H) reports the OPEN/ CLOSED status.

The top auxiliary contact can act as either an auxiliary contact (function H) or a signal contact (function S). The user can set the function at the time of installation. When used as a signal contact, it reports information about the automatic tripping of the protection devices.
A test button on the front simulates functions H or S . There are also a reset button for the contacts (function S ) and a tripping signal (function S ).

Miniature Circuit Breakers

## Shunt Trip and Undervoltage Release

Applications
-Commercial

- Industrial

## Features

-Common devices for all miniature circuit breakers
-Can be coupled on both sides of MCBs
-Permits pass-through of busbars, pin and fork, at top or bottom terminals
-Stack up to four modules on left and right sides
Approval/Marking
-cURus
-IEC 947-2

## Shunt Trip Tele L

The Tele L allows remote switching of any miniature circuit breaker by means of push buttons or any other automatic management processor. A built-in contact, in series with the coil, prevents burnout damage if the voltage remains.

Shunt Trip Tele L Performance

| Rated voltage (V) | (V) |
| :--- | :---: |
| Tripping time (ms) | $110 / 415,110 / 125 \mathrm{DC}$ |

## Undervoltage Release Tele $U$

The Tele U releases the main miniature circuit breaker in case the power supply drops below $0.5 \times$ Un. Time delay is adjustable up to 300 ms .

Undervoltage Release Tele U Performance

| Rated voltage AC UN (V) | 240 |
