

INTEGRAL-BONNET NEEDLE VALVES

H-300U SERIES

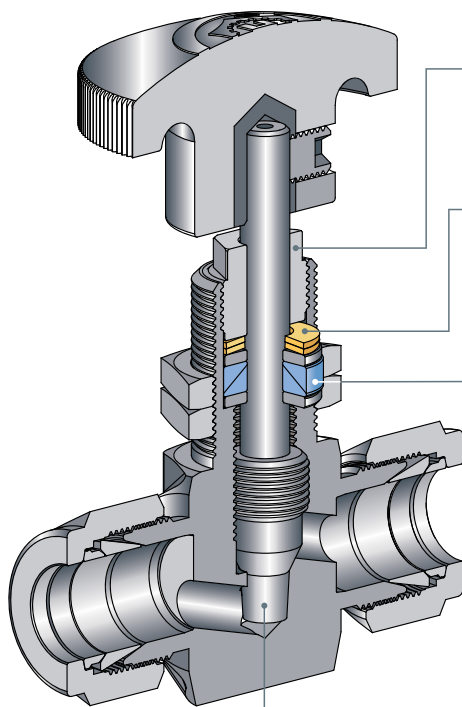

FEATURES

- Certified for ISO 15848-1:2006(E)
- Straight and angle pattern
- Stainless steel and brass construction
- MAWP 5000 psi (345 bar), MAWT 446°F (230°C)
- Flow coefficient (Cv) 0.09 to 1.8
- Sizes: 1/8" to 3/4" (3mm-12mm)
- Round plastic, round aluminum, and metal bar handles
- Variety of stem types
- Packing bolt for easy panel mounting, no packing disassembling is required
- Chevron stem packing provides lowest operation torques
- Belleville washers to compensate packing wear
- Special synthetic, anti-seize stem lubricant for best resistance to hot media

MATERIAL OF CONSTRUCTION

No.	Component	Qty.	Material
1	Handle	1	Phenolic
2	Set Screw	1	St.St.316
3	Packing Bolt	1	St.St.316
4	Belleville Washer	2	St.St.302
5	Gland	2	St.St.316
6	Upper Packing	1	PTFE
7	Bottom Packing	1	PTFE
8	A Regulating Stem	1	St.St.316 with surface treatment
	B V-Stem	1	St.St.316 with surface treatment
	C Non-Rotatin Stem	1	St.St.316 with surface treatment
	D Soft Seat Stem	1	St.St.316 with surface treatment
9	Panel Nut	2	St.St.316
10	Body	1	St.St.316

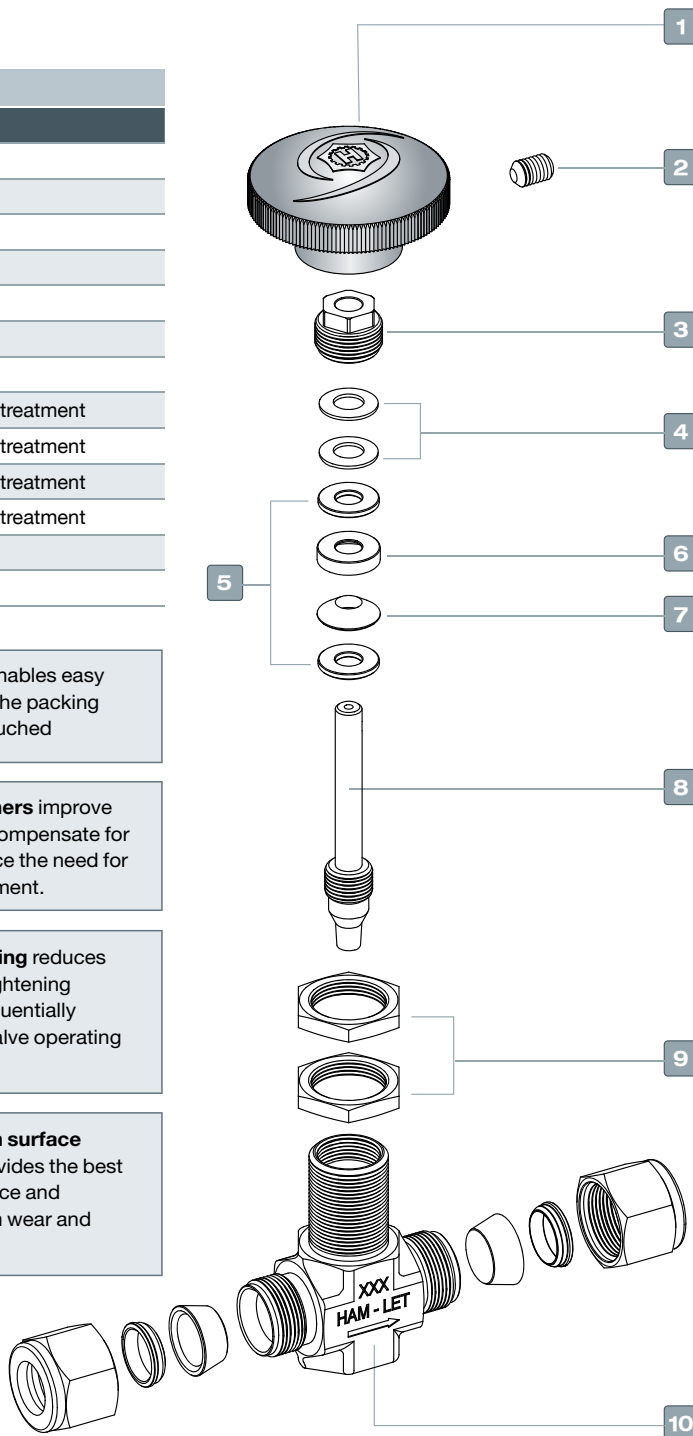

Packing bolt enables easy mounting with the packing remaining untouched

Belleville washers improve valve sealing, compensate for wear, and reduce the need for packing adjustment.

Chevron packing reduces packing bolt tightening torque, consequentially reducing the Valve operating torque.

Stem diffusion surface hardening provides the best galling resistance and protection from wear and corrosion.

GENERAL

The H-300U Series is an advanced high pressure instrumentation needle valve for shut-off service, its packing bolt design for easy mounting being the best solution for instrumentation panels.

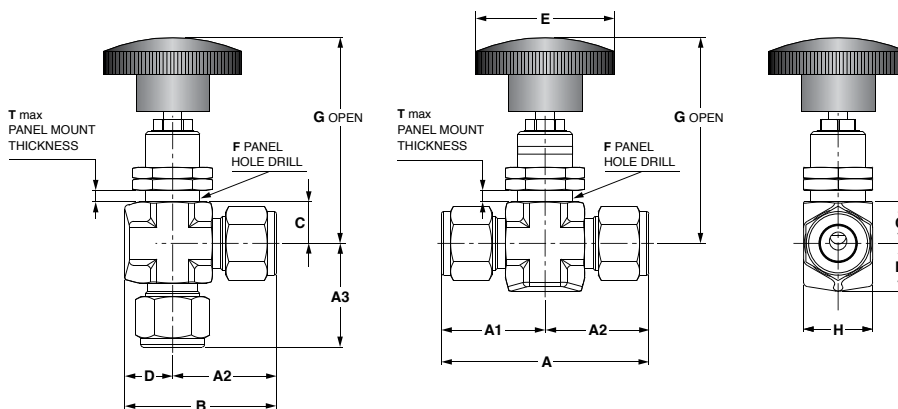

This compact valve enables a relatively high level of flow regulation and long-life service.

Special stem surface treatment, based on low temperature carbon diffusion, enables higher surface hardness with improved wear resistance, resistance to system contaminations and optimal operational torque.

STEM OPTIONS

H-300U needle valves are available with a choice of stem tips:

8A Regulating:
Used where some degree of flow control is required.

8B V-Stem:
Standard stem tip used for the on/off operation in general-purpose liquids and gas service.

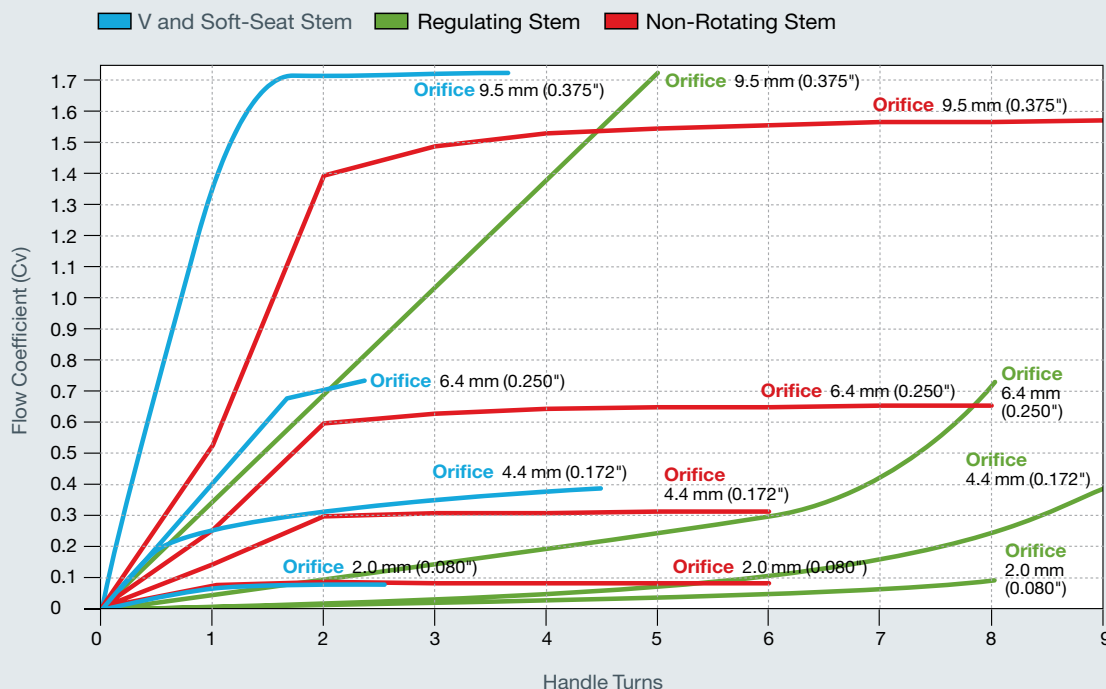

8C Non-Rotating Stem:
Typically used in high-cycle applications to extend valve life and prevent stem rotation inside the body tip, a suitable selection for gaseous high pressure applications.

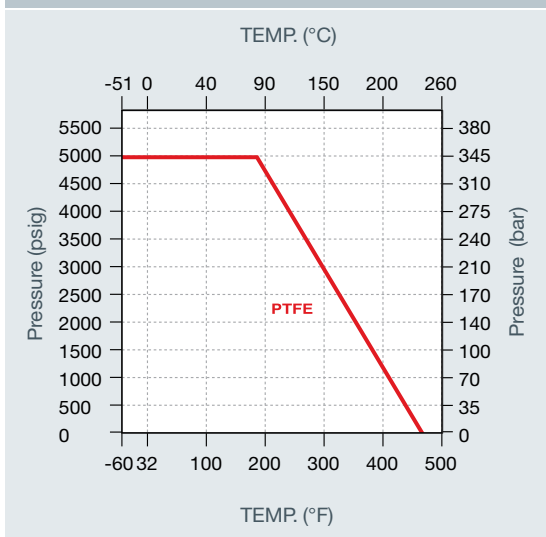

8D Soft Seat:
A soft seat tip requires a lower seating torque than a metal stem tip; the best choice for clean gaseous high pressure applications; MAWT is 200°F (93°C).

FLOW DATA: FLOW COEFFICIENT VS. HANDLE TURNS

PRESSURE TEMPERATURE RATING

TECHNICAL DATA

The following table contains the temperature and pressure ratings for a standard valve with PTFE packing.

Body Material	Stem Type	Rating	
		Temperature	Pressure
316 St.St.	All St.St. Stems	-51°C to 230°C (-60°F to 446°F)	5000 psi
	PCTFE	-46°C to 93°C (-51°F to 200°F)	5000 psi
Brass	Regulating & V-Stem	-46°C to 200°C (-51°F to 392°F)	3000 psi
	PCTFE	-46°C to 93°C (-51°F to 200°F)	3000 psi

* Extreme temperature fluctuations may require packing adjustment.

Notes:

- The H-300U was designed for high pressure services where moderately uncontaminated media is used
- For steam applications, it is recommended to select one of HAM-LET severe service needle valves
- For oxygen applications, select the oxygen clean treatment option.
- For relatively high pressure pure oxygen applications, assure that the selected valve is tested and found to meet the specific application requirements

CLEANING & PACKAGING

Every H-300U series needle valve is cleaned in accordance with Standard Cleaning and Packaging (procedure 8184). Oxygen Clean & Lubricant Free Cleaning and packaging, in accordance with Special Cleaning and Packaging (procedure 8185), is available as an option.

Lubricant free cleaned valves have significantly higher actuation torque.

TESTING

The H-300U Series Needle Valve design has been tested for Proof and Burst. Every H-300U Needle Valve is factory tested with nitrogen at 1000 psi (69 bar). The maximum allowable leakage across the seat is 0.1 std cc/min.

PACKING ADJUSTMENT

Due to the varied service applications of the valve, packing adjustment may occasionally be necessary. Packing is factory adjusted to 1000 psig service. Initial packing adjustment is recommended after installation and prior to start-up. See packing adjustment procedure No.3901882 on the website.

Warning!

The system designer and user have the sole responsibility for selecting products suitable for their special application requirements, ensuring their safe and trouble-free installation, operation, and maintenance. Application details, material compatibility and product ratings should all be considered for each selected product. Improper selection, installation or use of products can cause property damage or personal injury.
