

## Specification Sheet

Part Number: UFCIRCXDCWX

**Article Number**

857-00536

**Type**

UFCIR-CXDCWX

**Color**

Black (BK)

**Features & Benefits**

- Large size and capacity make it ideal for high fiber count FTTx and trunk applications.
- Accommodates up to 1440 fibers and 26 drops providing fiber connections and distribution where needed.
- Double stacked splice trays keep enclosure size to a minimum.

**Quantity Per**

box

**Product Description**

The UFC is the largest fiber-optic splice closure in the range. With 24 round ports and 2 oval ports, it can accommodate substantial amounts of fiber often found in FTTx and trunk applications. The Integrated Routing (IR) UFC closure has a modular fiber management system available in a range of lengths to suit the number of fibers and splices required. The IR system ensures positive fiber management; a 30 mm bend radius can be maintained from cable entry all the way up onto the splice trays. The UFC IR solution's larger size makes it possible to double stack the splice trays as well as double the fiber capacity. The area between the two splice tray stacks offers room for fiber loop storage. The closure has a splice capacity of up to 1440 fibers. Trays are supplied in packs of 12 (SC-B) or six (SE), available in multiple colors for color coding within the enclosure, can be easily installed onto the IR backplane as needed and can be configured to accommodate heat shrink fusion splice sleeves, and the SE trays support a selection of fiber-optic splitters. Its cover is environmentally sealed with a high-quality clamp and O-ring. Cable ports can be sealed using either Cablelok mechanical seals or heat-shrink sleeves. Closure can be fitted with a flash test valve and/or grounding feed through.

**Short Description**

IR UFC Cover-C with 60 SE Trays - Double Stack (720 fibers), ABS/PA, Black, 1/pkg

**Global Part Name**

UFCIR-CXDCWX

**Technical Description**

The UFC Integrated Routing (IR) C Length Double Stacked closure is available with a Cablelok (Polypropylene) or Heatshrink (Flame Retardant Polypropylene) base. The base configuration of 28 round ports and 2 oval ports covers a cable diameter range of 4.0 – 29.0mm when using Cablelok mechanical seals and 6.0 – 35.0mm when using heatshrink. The mounting system is manufactured from Grade 304 stainless steel and the backplanes are aluminium extrusions which can accommodate up to 60 IR SE trays or 120 IR SC/SC-B trays or a combination of SE, SC and SC-B trays. The position of the mounting system allows easy access for the routing of the fibre on to the trays and provides storage space between the two backplanes for the storage of fibre loops. The trays and fibre optic routing module are white which makes it easy to see the colour of the fibre elements as they are routed through the positive fibre management system. Fibre slot retaining blocks guide fibre elements in to the IR system, the foam pad on the retainer is partially cut through to accommodate a range of fibre counts. All IR system cover plates are coloured blue identifying them as removable parts allowing access to the fibre and the fibre slot retaining block and tray retaining clips are coloured red to aid in identification if they are dropped.

**Port Count**

1 16 10 2

**Variant**

Outdoor Enclosure

**Material**

Acrylonitrile Butadiene Styrene (ABS) Polyamide (PA)

**Material Shortcut**

PA ABS

**Package Quantity(Imperial)**
