X200 Series Inverter
Quick Reference Guide

- Single-phase Input 200V class
- Three-phase Input 200V class
- Three-phase Input 400V class
Caution: Be sure to read the X200 Manual and the X200 Manual Addendum, and follow their Cautions and Warnings for the initial product installation. This Quick Reference Guide is intended for reference use by experienced users in servicing existing installations.

Caution: Power terminal assignment is is different compared to old models such as L100, L200 series. Pay attention when wiring the power cable.
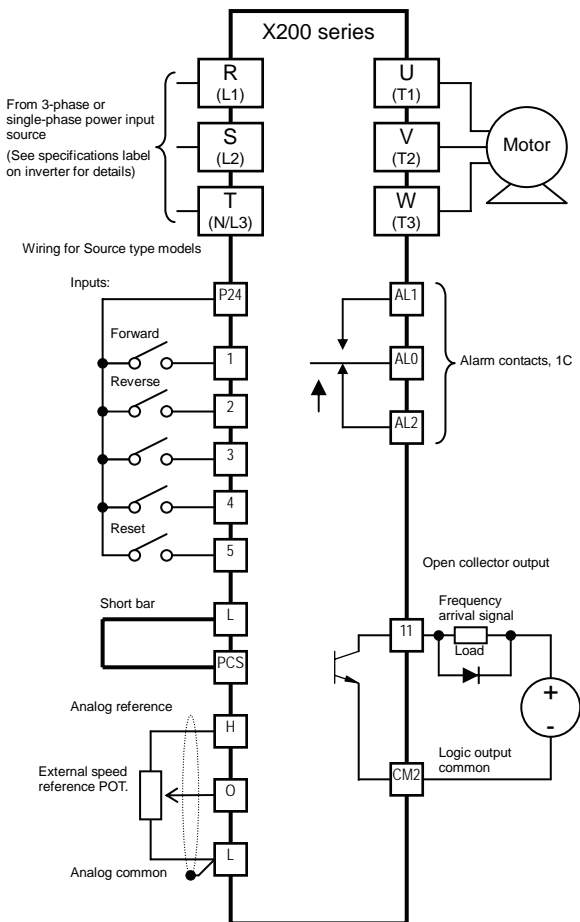

Control Circuit Terminals
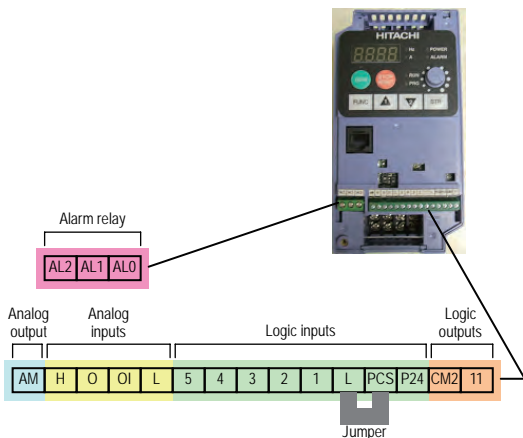

| Terminal Name	Description	Ratings and Notes
P24	+24V for logic inputs	24VDC supply, 30mA max. (Notes: Do not use for network power. Do not short to terminal L)
1, 2, 3, 4, 5	Intelligent (programmable discrete logic) inputs	27VDC max. (Use P24 or an external supply reference to terminal L), 4.7kΩ input impedance.
11	Discrete logic output	50mA max. ON current, 27VDC max. OFF voltage
L (right)	GND for logic inputs	Sum of input 1 to 5 currents (Note: Do not ground)
CM2	Common for logic outputs	50mA max for terminal 11 current
AM	Analog voltage output	0 to 10VDC, 1mA max.
L (left)	Common for analog inputs	Sum of OI, O and H currents (return)
OI	Analog input, current	4 to 19.6mA range, 20mA nom.
O	Analog input, voltage	0 to 9.6VDC range, 10VDC nominal, 12VDC max., input impedance 10kΩ
H	+10V analog reference	10VDC nominal, 10mA max.
AL0	Relay common contact	Contact rating
AL1	Relay contact, normally closed during RUN	Max resistive load=250VAC, 2.5A; 30VDC 3A;
AL2	Relay contact, normally open during RUN	Max inductive load=250VAC, 0.2A; 30VDC 0.7A Minimum load=5VDC 100mA, 100VAC 10mA

Note) Analog input O and OI cannot be used at the same time.

Basic Wiring Diagram

The following wiring diagram shows the power and motor connections for basic operation. The optional signal input wiring supports external Fwd and Rev Run command, and a speed potentiometer.

Inverter Keypad Operation

- **Run/Stop LED –** ON when the inverter output is ON and the motor is developing torque (Run Mode), and OFF when the inverter output is OFF (Stop Mode).

- **Program/Monitor LED –** This LED is ON when the inverter is ready for parameter editing (Program Mode). It is OFF when the parameter display is monitoring data (Monitor Mode).

- **Run Key Enable LED –** is ON when the inverter is ready to respond to the Run key, OFF when the Run key is disabled.

- **Run Key –** Press this key to run the motor (the Run Enable LED must be ON first). Parameter F004, Keypad Run Key Routing, determines whether the Run key generates a Run FWD or Run REV command.

- **Stop/Reset Key –** Press this key to stop the motor when it is running (uses the programmed deceleration rate). This key will also reset an alarm that has tripped.

- **Potentiometer –** Allows an operator to directly set the motor speed when the potentiometer is enabled for output frequency control.

- **Potentiometer Enable LED –** ON when the potentiometer is enabled for value entry.

- **Parameter Display –** A 4-digit, 7-segment display for parameters and function codes.

- **Display Units, Hertz/Amperes –** One of these LEDs will be ON to indicate the units associated with the parameter display.

- **Power LED –** This is ON when the power input to the inverter is ON.

- **Alarm LED –** ON when an inverter trip is active (alarm relay contact will be closed).

- **Function Key –** This key is used to navigate through the lists of parameters and functions for setting and monitoring parameter values.

- **Up/Down keys –** Use these keys alternatively to move up or down the lists of parameter and functions shown in the display, and increment/decrement values.

- **Store key –** When the unit is in Program Mode and you have edited a parameter value, press the Store key to write the new value to the EEPROM.

Keypad Navigation Map
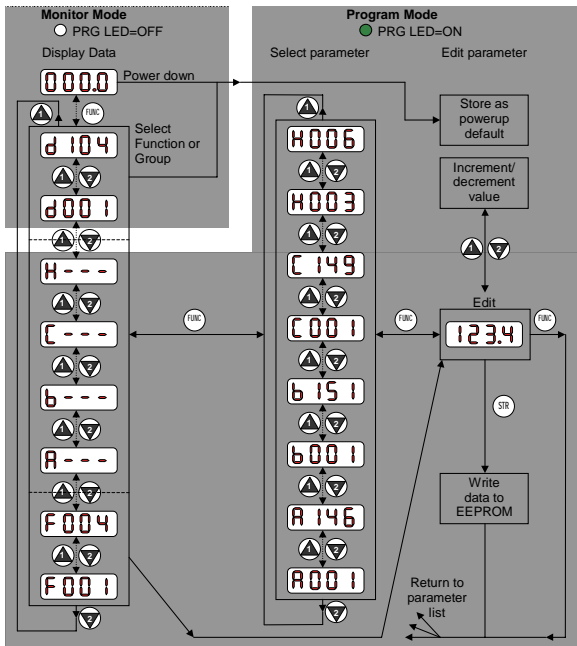

Powerup Test

The Powerup Test procedure uses minimal parameter settings to run the motor. The procedure describes two alternative methods for commanding the inverter: *via the inverter keypad, or via the logic terminals.*

- Check power input and motor output wiring (see page 3 diagram).
- If using logic terminals for testing, verify correct wiring on [PCS], [FW], [H], [O] and [L] (bottom row) per the diagram on page 3.
- Reverse [RV] input wiring (defaults to terminal [2]) is optional.

Step	Description	Via Keypad	Via Logic Terminals
1	Set speed command source setting	A001=00 (Keypad pot)	A001=01 [H·O·L] input
2	Set Run FW command source	A002=02 (Run key)	A002=01 [FW] input
3	Set Run REV command source	–	C002=01 (default) [RV] input
4	Set motor base freq.	A003=60	
5	Set motor poles	H004 = 4 (default), change only if your motor is different	
6	Set keypad display to monitor freq.	Access d001, press Func key, display will show 0.0	
7	Perform safety check	Disconnect load from motor	
7	Perform safety check	Turn keypad pot. To MIN position	Ensure voltage on [O] – [L] terminals = 0V
8	Run Forward command	Press Run key	Turn ON the [FW] terminal
9	Increase speed	Rotate keypad pot. CW direction	Increase voltage at [O]
10	Decrease speed	Rotate keypad pot. CCW direction	Decrease voltage at [O]
11	Stop motor	Press stop key	Turn OFF the [FW] terminal
12	Run Reverse command (optional)	–	Turn ON the [RV] terminal
13	Stop motor	–	Turn OFF the [RV] terminal

Error Codes

The X200 series inverters will trip on over-current, over-voltage, and under-voltage to protect the inverter. The motor output turns OFF, allowing the motor to free-run to a stop. Press the Stop/Reset key to reset the inverter and clear the error.

Basic Error Codes

Error Code	Name	Probable Cause(s)
E_01	Over current event while at constant speed	• Inverter output was short-circuited • Motor shaft is locked
E_02	Over current event during deceleration	• Load is too heavy • A dual voltage motor is wired incorrectly Note: The X200 will over-current trip at nominally 200% of the rated current.
E_03	Over current event during acceleration	
E_04	Over current event for other conditions	• DC braking power (A_54) set too high • Current transformer / noise error
E_05	Overload protection	• Motor overload is detected by the electronic thermal function
E_07	Over voltage protection	• DC bus voltage exceeds a threshold, due to regeneration energy from the motor
E_08	EEPROM error	• Built-in EEPROM memory experienced noise, high temperature, etc.
E_09	Under voltage error	• DC bus voltage decreased enough to cause a control circuit fault • Instantaneous power failure occurred
E_11	CPU error	• Built-in CPU had internal error
E_12	External trip	• [EXT] input signal detected
E_13	USP (Unattended Start Protection)	• When (USP) was enabled, an error occurred when power was applied while a Run signal was present
E_14	Ground fault	• A ground fault was detected between the inverter output and the motor. This feature protects the inverter, and does not protect humans.
E_15	Input over-voltage	• Input voltage was higher than the specified value, 100 sec. after powerup
E_21	Inverter thermal trip	• Inverter internal temperature is above the threshold
E_30	Driver error	Refer to E_01~E_04
E_35	Thermistor	• Thermistor input, [5] and [L] is over the temperature threshold
E_37	Emergency stop	• Emergency stop signal has given
E_60	Communications error	• Communication error on RS485 MODBUS communication
- - -	Under-voltage (brownout) with output shutoff	• Low input voltage caused the inverter to turn OFF the motor output and try to restart. If unsuccessful, a trip occurs.

Error Trip Conditions

Use function code d081 to access the error trip conditions for the current error as shown in the table below. Use the Up and Down arrow keys to scroll through the trip condition parameters.

| Step	Display
1. Access d081	d081
2. Press Function Key	If no error: _ _ _ If error exists: E_xx (error code)
3. Press Up/Dn key (if error exists)	Output frequency at trip point: 48.50 Motor current at trip point: 10.3 DC bus voltage at trip point: 189.5 Cumulative Run hours at trip point: 15 Cumulative power-ON hours at trip point: 18

Restoring Factory Default Settings

| Action	Display	Function/Parameter
Press (FUNC), (▲) or (▼) as needed	b- - -	"B" Group selected
Press (FUNC)	b001	First "B" Group parameter
Press/hold (▲) until…	b085	Country code for initialization selected
Press (FUNC). If setting is correct, then skip next step.	02	00 = Japan 01 = Europe 02 = United States
To change country code, press (▲) or (▼) to set; (STR) to store.		
Press (FUNC)	b085	Country code for initialization selected
Press (▼)	b084	Initialization function selected
Press (FUNC)	00	00 = disable initialization
Press (▲)	01	01 = enable initialization
Press (STR)	b084	Initialization now enable to restore all defaults
Press/hold (FUNC), (▼) and (STOP RESET) keys. Do not release yet.	b084	First part of key sequence
When your country code appears in the display, release all the keys.	EU USA JP	Default parameter country code shown during initialization
Initialization is complete.	d001	Function code for output frequency monitor shown

i **Note:** *After initializing the inverter, use the Powerup Test on page 6 to get the motor running again.*

Error exists?

No → No error

Yes

E07 — Error code

60.0 — Output frequency at trip point

4.0 — Motor current at trip point

398.0 — DC bus voltage at trip point

15 — Cumulative inverter operation time at trip point

18 — Cumulative power-ON time at trip point

Parameter tables for user-settable functions follow these conventions:
- Some parameters have 2nd motor equivalents, indicated by the x2xx parameter codes in the left-most column.
- Some parameters specify an option code. Where applicable, the option codes will be in a bulleted list in the Name/Description column.
- The default values apply to all models unless otherwise noted for each parameter… -FE (Europe) / -FU (U.S.) / -FR (Japan).
- Some parameters cannot be edited during Run Mode, and certain Software Lock settings (b031) can prohibit all edits. If in doubt, place the inverter in Stop Mode or Consult the inverter manual for details.

"F" group: Main Profile Parameters

Func. Code	Name / Description	Default value -FE/FU	Set value
F001	Output frequency setting	0.0

C086	AM offset calibration		100.0	
C091	Debug mode enable • 00 No Display • 01 Display		00 <Do not change>	00
C101	Up/Down memory mode selection • 00 Clear last frequency (return to default freq. F001) • 01 Keep last freq. adjusted by Up/Down		00	
C102	Reset selection • 00 Cancel trip state at input signal ON transition, stops INV if in Run Mode • 01 Cancel trip state at input signal OFF transition, stops INV if in Run Mode • 02 Cancel trip state at input signal ON transition, no effect if in Run Mode		00	
C141	Input A select for logic output	Twelve option codes available see page 20	00	
C142	Input B select for logic output		01	
C143	Logic function select • 00 [LOG] = A AND B • 01 [LOG] = A OR B • 02 [LOG] = A XOR B		00	
C144	Terminal [11] ON delay		0.0	
C145	Terminal [11] OFF delay		0.0	
C148	Output relay ON delay		0.0	
C149	Output relay OFF delay		0.0	

"H" group: Motor Constants Functions

Func. Code	Name / Description	Default -FE/FU	Set value
H003/ H203	Motor capacity	Factory set	
H004/ H204	Motor poles setting • 2 • 4 • 6 • 8	4	
H006/ H206	Motor stabilization constant	100	

Intelligent Input Terminal Listing

Symbol	Code	Input Terminal Name
FW	00	Forward Run/Stop
RV	01	Reverse Run/Stop
CF1	02	Multi-speed select, Bit 0 (LSB)
CF2	03	Multi-speed select, Bit 1
CF3	04	Multi-speed select, Bit 2
CF4	05	Multi-speed select, Bit 3 (MSB)
JG	06	Jogging
DB	07	External DC braking
SET	08	Set (select) 2nd motor data
2CH	09	2-stage accel and decel
FRS	11	Free-run stop
EXT	12	External trip
USP	13	Unattended start protection
SFT	15	Software lock
AT	16	Analog input voltage/current selection
RS	18	Reset inverter
PTC	19	PTC thermistor thermal protection
STA	20	Start (3-wire interface)
STP	21	Stop (3-wire interface)
F/R	22	FWD,REV (3-wire interface)
PID	23	PID disable
PIDC	24	PID Reset
UP	27	Remote control Up function
DWN	28	Remote control Down function
UDC	29	Remote control data cleaning
OPE	31	Operator control
ADD	50	Add frequency enable
F-TM	51	Force Terminal Mode
RDY	52	Inverter ready
SP-SET	53	Special set
EMR	64	Emergency stop
-	255	(No function)

Intelligent Output Terminal Listing

Symbol	Code	Output Terminal Name
RUN	00	Run signal
FA1	01	Freq. arrival type 1 – constant speed
FA2	02	Freq. arrival type 2 – over-frequency
OL	03	Overload advance notice signal
OD	04	Output deviation for PID control
AL	05	Alarm signal
Dc	06	Analog input error
FBV	07	PID second stage output
NDc	08	Network error
LOG	09	Logic output function
ODc	10	Communication option error
LOC	43	Low load detection

Analog Input Configuration

The following tables show the parameter settings required for various analog input signal types.

A005	02		03		04		05	
AT input	OFF	ON	OFF	ON	OFF	ON	OFF	ON
Active	[O]	POT	[OI]	POT	[O]		[OI]	

If [AT] is not assigned to any intelligent input terminal, it means AT=OFF in above table.

_i_ **Note:** *Analog input O and OI cannot be used at the same time.*

Analog Output Function Listing

The following table shows all three functions available for assignment to the analog output terminal:

• Terminal [AM], option set by C028

Option Code	Function Name	Description	Corresponding Signal Range
00	Output frequency	Actual motor speed, represented by PWM signal	0 to max. freq. in Hz
01	Output current	Motor current (% of maximum rated output current), represented by PWM signal	0 to 200%

UL® Cautions, Warnings, and Instructions

Wiring Warnings for Electrical Practices and Wire Sizes

The warnings and instructions in this section summarize the procedures necessary to ensure an inverter installation complies with Underwriters Laboratories® guidelines.

WARNING: "USE 60/75°C Cu wire only" or equivalent. For models X200-005S, -007S, -011S, -022S, -007N, -015N, -015L, -022L, -037L, -055L, -075L.

WARNING: "USE 75°C Cu wire only" or equivalent. For models X200-002S, -004S, -002N, -004N, -002L, -004L, -007L, -022H, -030H, -037H, -040H, -055H, 075H.

WARNING: "USE 60°C Cu wire only" or equivalent. For models X200-004H, -007H, and -015H.

WARNING: "Open Type Equipment"

WARNING: "Suitable for use on a circuit capable of delivering not more than 100k rms symmetrical amperes, 240V maximum when protected by Class CC, G, J or R fuses or circuit breaker having an interrupting rating not les than 100,000 rms symmetrical amperes, 240 volts maximum". For models with suffix S, N or L.

WARNING: "Suitable for use on a circuit capable of delivering not more than 100k rms symmetrical amperes, 480V maximum when protected by Class CC, G, J or R fuses or circuit breaker having an interrupting rating not les than 100,000 rms symmetrical amperes, 480 volts maximum." For models with suffix H.

WARNING: "Install device in pollution degree 2 environment."

WARNING: "Maximum Surrounding Air Temperature 50°C". or equivalent.

WARNING: "Caution-Risk of electric shock—capacitor discharge time is at least 5 minutes."

WARNING: "Solid state motor overload protection is provided in each model".

WARNING: "Integral solid state short circuit protection does not provide branch circuit protection. Branch circuit protection must be provided in accordance with the National Electric Code and any additional local codes" or equivalent.

Terminal Tightening Torque and Wire Size

The wire size range and tightening torque for field wiring terminals are presented in the tables below.

Input Voltage	Motor Output		Inverter Model	Power Terminal Wiring Size Range (AWG)	Torque	
	kW	HP			Ft-lbs	(N·m)
200V	0.2	1/4	X200-002SFE/NFU	14 (75°C only)	0.6	0.8
	0.4	1/2	X200-004SFE/NFU			
	0.55	3/4	X200-005SFE		0.9	1.2
	0.75	1	X200-007SFE/NFU			
	1.1	1 1/2	X200-011SFE	12		
	1.5	2	X200-015SFE/NFU			
	2.2	3	X200-022SFE/NFU	10		
	3.7	5	X200-037LFU	10	0.9	1.2
	5.5	7 1/2	X200-055LFU	8	1.5	2.0
	7.5	10	X200-075LFU			
400V Class	0.4	1/2	X200-004HFE/HFU	16 (75°C only)	0.9	1.2
	0.75	1	X200-007HFE/HFU			
	1.5	2	X200-015HFE/HFU			
	2.2	3	X200-022HFE/HFU	14 (75°C only)		
	3.0	4	X200-030HFE			
	4.0	5	X200-040HFE/HFU			
	5.5	7 1/2	X200-055HFE/HFU	10	1.5	2.0
	7.5	10	X200-075HFE/HFU			

Terminal Connector	Wiring Size Range (AWG)	Torque	
		Ft-lbs	(N·m)
Logic and Analog connectors	30 – 16	0.16 – 0.19	0.22 – 0.25
Relay connector	30 – 14	0.37 – 0.44	0.5 – 0.6

Wire Connectors

WARNING: Field wiring connections must be made by a UL Listed and CSA certified ring lug terminal connector sized for the wire gauge being used. The connector must be fixed using the crimping tool specified by the connector manufacturer.
Circuit Breaker and Fuse Sizes

The inverter's connections to input power for 400V class units must include UL Listed inverse time circuit breakers with 600V rating, or UL Listed fuses as shown in the table below.

Input Voltage	Inverter Model	Circuit breaker / Fuse	Ampere rating for Fuse or Breaker
Single/ Three- Phase 200V	X200-002SFFE/NFU	Inverse time circuit breaker	10
	X200-004SFFE/NFU		
	X200-005SFFE		
	X200-007SFFE/NFU		15
	X200-011SFFE		
	X200-015SFFE/NFU		20
	X200-022SFFE/NFU		30
	X200-037LFU		
	X200-055LFU		40
	X200-075LFU		50
Three- Phase 400V	X200-004HFE/HFU	Distribution Fuse (Class J)	3
	X200-007HFE/HFU		6
	X200-015HFE/HFU		10
	X200-022HFE/HFU		10
	X200-030HFE		15
	X200-040HFE/HFU		15
	X200-055HFE/HFU		20
	X200-075HFE/HFU		25

Motor Overload Protection

Hitachi X200 inverters provide solid state motor overload protection, which depends on the proper setting of the following parameters:
- B012 "electronic overload protection"
- B212 "electronic overload protection, 2nd motor"

Set the rated current [Amperes] of the motor(s) with the above parameters. The setting range is 0.2 * rated current to 1.0 * rated current.

WARNING: When two or more motors are connected to the inverter, they cannot be protected by the electronic overload protection. Install an external thermal relay on each motor.
