1. Lamps not included in assembled units.
2. Available as assembled or sub-assembled components.

## General Information

## Information About LED Lamps

Light-emitting diodes (LEDss) are P-N junction semiconductors with mechanisms called "junction electro-luminescence." Application of direct current results in radiation or emission of a monochromatic light.

Different semiconductor materials produce different wavelengths of light as shown below:

|  | Green | Gallium Phosphide (GaP) | 5600 A |
| :---: | :---: | :---: | :---: |
|  | Yellow | Gallium Arsenide Phosphide (GaAsP) | 5800 Å |
|  | Amber | Gallium Arsenide Phosphide (GaAsP) | 6300 Å |
|  | Red | Gallium Arsenide Phosphide (GaAsP) | $6600 \AA$ |
|  | Infrared | Gallium Arsenide (GaAs) | 9000 A |

## Advantages of Using LEDs

- LEDs are used when heat generated by incandescent lamps would damage nearby equipment or interfere with a precision process. This is particularly advantageous when multiple lights are grouped.
- LEDs can operate at low temperatures which would cause incandescent lamps to fail, since glass cracks during rapid cooling.
- LEDs consume 50 times less power than incandescent lamps, thereby reducing energy consumption.
- LEDs last 500 times longer than incandescent lamps. LEDs average a million hours (114 years) while incandescent lamps average 2000 hours.
- LEDs do not generally "blow out" unless subjected to a severe overvoltage. They exhibit a half-life type dimishment in brightness over time. After 50,000 hours ( 6 years) of use, IDEC LEDs will retain approximately half of their original intensity.
- IDEC's SUPERBRIGHT LEDs have high visibility.
- LEDs require little or no maintenance because of long life and high reliability.

## IDEC Recommendations

For optimum results, especially when using switches and pilot lights in operating environments which are conducive to overheating, use IDEC LED illuminated units. Transformers are available for use with incandescent illuminated units, which operate at lower voltages to avoid overheating.

When IDEC's L-120L lamp is used, make sure ambient temperatures do not exceed $30^{\circ} \mathrm{C}$ ( $86^{\circ} \mathrm{F}$ ). If a lamp from another supplier is used, it should be rated for less than 1.8 watts (15mA at 120 V AC), with ambient temperatures as stated above.

## Information About Incandescent Lamps

Filament-type incandescent lamps operate within the following parameters.
Light output and life expectancy depend on operating voltage. Light output varies to the 3rd or 4th power of the voltage. Life expectancy varies inversely to the 12th power of voltage. In other words, over-voltage of $5 \%$ reduces life expectancy by $50 \%$. Under-voltage of $5 \%$ doubles life expectancy at the price of light output efficiency.

Inrush current (initial current through the filament) has an adverse effect on life expectancy. Cold resistance (room temperature) will have a more detrimental effect than hot resistance to inrush current. Life expectancy of incandescent lamps can be maximized by reducing occurrences of cold resistance to inrush current.

Continued intermittent flashing will significantly reduce life expectancy. When using an incandescent lamp with a tungsten filament, flashing will not reduce life expectancy as long as light output does not exceed that of steady burning.

When an incandescent lamp must withstand shock and vibration, use low voltage/high amperage ( $5-6 \mathrm{~V} / 60-120 \mathrm{~mA}$ ) lamps. These lamps have a short, thick filament with a high resonant frequency.

Provide cooling by using a heat sink, particularly when multiple incandescent lamps are grouped or when air circulation is limited. Make sure ambient temperatures do not exceed $100^{\circ} \mathrm{C}\left(212^{\circ} \mathrm{F}\right.$ ) for maximum life of incandescent lamps.

Comparison: LED vs. Incandescent Lamps

|  |  | Superbright LEDs | Incandescent |
| :---: | :---: | :---: | :---: |
|  | Heat Dissipation | Very Low | High |
|  | Life Expectancy | Very Long | Short |
|  | Reliability | Very High | Low |
|  | Mechanical Strength | Not Susceptible | Susceptible to Shock/Vibration |
|  | Maintenance Required | Negligible | Frequent |
|  | Operation at Low Temps. | Possible | Not Possible |
|  | Inrush Current | Negligible | Very Large |
|  | Voltage Effects on Life | Insignificant | Significant |
|  | Brightness | Slightly Less | Slightly More |

## Ordering Information

1. IDEC offers assembled and sub-assembled switches and pilot lights for your convenience. In some cases there is a cost difference, with sub-assembled units costing slightly less. Since assembled units are custom made to your order, a couple of days for assembly is added to delivery . To minimize delivery or inventory requirements, it is recommended that switches and pilot lights be ordered as sub-components.
2. When ordering pilot lights or illuminated pushbuttons, make sure to specify the color code in place of the asterisk in the part number, (LED or incandescent lamp included). Spare lamps can be ordered and are listed with sub-assembly components.
3. Accessories, such as locking ring wrench, lens removal tool, and lamp holder, are available to make installation and assembly easier. IDEC recommends using these accessories and is not responsible for damage as a result of using the wrong tool.
4. Marking plates are available for switches and pilot lights which feature a flat lens. Printed mylar (not included) can also be inserted under lens for labeling purposes.
5. Nameplates are available for TW, $7 / 8^{\prime \prime}(22 \mathrm{~mm})$, HW $7 / 8 "(22 \mathrm{~mm})$, and TWTD series, $01-13 / 64^{\prime \prime}(30 \mathrm{~mm})$. For prompt delivery, order standard legends. Custom engraving is also offered for an additional charge.

## Installation and Operation

1. Use the appropriate lamp holder to remove or install LED or incandescent lamps. Using pliers will damage the lamp.
2. When mounting switches and pilot lights into a panel, use locking ring wrench.Using pliers or tightening excessively will damage the locking ring.
3. A series, $21 / 64^{\prime \prime}(8 \mathrm{~mm})$, can be mounted on a panel $0.019^{\prime \prime}(0.5 \mathrm{~mm})$ to 0.236 " $(6 \mathrm{~mm})$ thick.
4. LW $7 / 8^{\prime \prime}(22 \mathrm{~mm})$, TW, $7 / 8^{\prime \prime}(22 \mathrm{~mm})$, and TWTD series, $\varnothing 1-13 / 64^{\prime \prime}(30 \mathrm{~mm})$, feature an adjustment ring for mounting on a panel $0.038^{\prime \prime}(1 \mathrm{~mm})$ to 0.236 " ( 6 mm ) thick. Using a nameplate or an anti-rotation ring adds $0.031^{\prime \prime}(0.8 \mathrm{~mm})$ to the panel thickness.
5. When applicable, solder terminals within $20 \mathrm{~W} / 5 \mathrm{sec}$ or $260^{\circ} / 3 \mathrm{sec}$ without exerting external force to the terminals. Use a non-corrosive resin liquid flux.
6. The operating voltage for LED units represents a complete DC value. When using a pulsing voltage, such a full-wave rectification, keeppeak currents within the forward current $I_{f}$. Peak currents exceeding $I_{f}$ may shorten the life of the LED lamp.
7. To avoid a short circuit, never connect NO and NC contacts to different voltages or power sources.
8. Optimum performance of TW and TWTD illuminated pushbuttons, selector switches, and pilot lights is obtained with IDEC LED and incandescent lamps.
9. For maximum life of incandescent lamps (approximately 2000 hours), use within the rated operating voltage. If it is necessary to use a higher voltage, keeping ambient temperature below $30^{\circ} \mathrm{C}\left(86^{\circ} \mathrm{F}\right)$ will help prolong the life of an incandescent lamp.
[^0]LW Series - Switches and Pilot Devices: 7/8" (22mm)

## LW Series offer flexibility in space-saving package

## Key features include:

- PC board mount, solder or screw terminal
- Collective mounting saves space
- Non-reflective lens
- Highly visible marking plate
- Tamper proof construction
- Light touch reduces strain
- Gold or silver contacts
- Removable contacts simplify wiring and facilitate PCB applications

LW Series switches and pilot lights can be mounted collectively on 1.0" centers. Combined with pcb terminals and locking lever removable contacts, this eases manufacture of pre-fab pushbutton arrays (as pictured). PC Board tracing/soldering of contacts can be done in tandem with panel cutting/operator installation.

All LW series units mount by means of a locking ring that comes on from the rear of the panel, as such they can not be removed from outside the panel and are relatively tamperproof.

Combining the snap action and tactile feel of miniature commercial pushbuttons with the size and ruggedness of industrial pushbuttons, LW pushbuttons are a unique solution to many applications.

Choose from standard silver contacts or low-level gold plated contacts. Terminals available in .110" solder tab, M3 screw, or pcb pins.

$\mathrm{Ali}_{n}^{+}$Requires LW-C00V removable terminals in addition to operator.

Part Numbers: Lenses

| Type | Part Number |
| :--- | :--- |
| Round | LW1A-P1-(2) |
| Square |  |

In place of ${ }^{(2), \text { specify Lens/LED Color Code. }}$

Part Numbers: Lamps (LED)

| Type | Voltage | Current | Part Number |
| :---: | :---: | :---: | :---: |
| LED | 6V AC/DC | 20 mA | LSTD-6 ${ }^{2}$ |
|  | 12V AC/DC | 20 mA | LSTD-1 ${ }^{2}$ |
|  | 24 V AC/DC | 20 mA | LSTD-2® |
|  | 120 V AC | 10 mA | LSTD-H2 ${ }^{2}$ |
|  | 240V AC $\pm 10 \%$ |  | LSTD-M4 ${ }^{2}$ |
| Incandescent | 6.3V AC/DC, 1W |  | IS-6 |
|  | 12V AC/DC, 1W |  | IS-12 |
|  | 24V AC/DC, 1W |  | IS-24 |

1. In place of (2), specify the LED color code.
2. The LED contains a current-limiting resistor and reverse polarity protection diode.
(2) LED/Lens Color Code

| Color | Code |
| :--- | :--- |
| Amber | A |
| Green* $^{*}$ | GD (LED lenses)* <br> GL (Incandescent lenses) <br> $\mathrm{G}($ LED lamps)) |
| Red | R |
| Blue | S |
| White | W |
| Yellow | Y |
| * The GD lens is a lighter green than the GL.. |  |
| For green LED, use "G" as color code. |  |

Selector and Keylock Switches (Assembled)
Part Numbers: LW1S Selector Switches

| Style | Position | Contact Material | Contact | Part Number |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  | 3PDT | LW1F-3C30-(2) | LW1F-3C30V-(2) | - |
|  |  | Silver | DPDT | LW1F-3C60-(2) | - | LW1F-3C60M-(2) |
|  |  |  | 3PDT | LW1F-3C70-(2) | - | - |

1. In place of (2), specify color code. See previous page for color codes.
2. Lamps must be ordered separately for all illuminated pushbuttons. See previous page.
3. For contact operation, see next page.
4. For sub-assembly part numbers, see page A-67.

Contact Operations

Contact Operation: Selector and Keylock Switches

| Position | Contact | Operator Position and Contact Position (Top View) |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Left | Center | Right |
|  | SPDT |  | - |  |
|  | DPDT |  | - |  |
|  | 3PDT |  | - |  |
|  <br> $45^{\circ}$ <br> 3-Position Maintained | DPDT |  |  |  |
|  | 3PDT |  |  |  |

Terminal Arrangements (Bottom View): LWDL and LWDB Pushbuttons

SPDT has C, NO and NC only on the center. DPDT has C, NO, and NC only on the right and left.

3 pole non-illuminated

SPDT has C, NO and NC only on the right. DPDT has $C, N O$, and $N C$ only on the right and center.

Part Numbers: Contact Blocks

| Appearance |  | Style |  | Contact Material |  | Contact | Part Number |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Solder/Tab | PC Board |  |  | Screw |  |
|  |  |  |  | Illuminated Selectors |  |  | Gold |  | SPDT | LW-C10 | LW-C10V | - |  |
|  |  | DPDT | LW-C20 |  |  | LW-C20V |  |  | LW-C20M |  |
| $\cdots$ |  | 3PDT | LW-C30 |  |  | LW-C30V |  |  | - |  |
|  |  | Silver |  |  |  | SPDT | LW-C50 | - | - |  |
|  |  |  |  | DPDT | LW-C60 | - | LW-C60M |  |
|  |  |  |  | 3PDT | LW-C70 | - | - |  |
|  |  | Non-Illuminated Selectors |  |  |  | Gold |  | SPDT | LW-C1 | LW-C1V | - |  |
|  |  |  |  | DPDT | LW-C2 |  |  | LW-C2V | LW-C2M |  |
| , |  |  |  | 3PDT | LW-C3 |  |  | LW-C3V | - |  |
|  |  |  |  | Silver |  | SPDT | LW-C5 | - | - |  |
|  |  |  |  | DPDT | LW-C6 | - | LW-C6M |  |
|  |  |  |  | 3PDT | LW-C7 | - | - |  |
| Part Numbers: Lamps (LED) |  |  |  |  |  |  |  | (2) LED/Lens Color Code |  |  |
| Type | Voltage |  | Current |  |  | Part Number |  |  |  | Color |  | Code |
| LED | 6V AC/DC |  | 20 mA |  |  | LSTD-6®2 |  |  |  | Amber |  | A |
|  | 12V AC/DC |  | 20 mA | LSTD-12 |  |  |  | Green* |  | GD (LED lenses)* |
|  | 24 V AC/DC |  | 20 mA | LSTD-2 ${ }^{\text {2 }}$ |  |  |  |  |  | GL (Incandescent lenses) G (LED lamps)) |
|  | 120 V AC |  | 10 mA | LSTD-H2 ${ }^{2}$ |  |  |  | Red |  | R |
|  | $240 \mathrm{~V} \mathrm{AC} \pm$ |  |  | LSTD-M4(2) |  |  |  | Blue |  | S |
| Incandescent | 6.3V AC/DC | , 1W |  | IS-6 |  |  |  | White |  | W |
|  | $12 \mathrm{VAC} / \mathrm{DC}$ | , 1W |  | IS-12 |  |  |  | Yellow |  | Y |
|  | 24V AC/DC, 1W |  |  | IS-24 |  |  |  | * The GD lens is a lighter green than the GL. For green LED, use " $G$ " as color code. |  |  |

1. In place of (2), specify the LED color code.
2. The LED contains a current-limiting resistor and reverse polarity protection diode.

Accessories - LW Series

| Style | Description/Usage | Part Number |
| :---: | :---: | :---: |
| Ring Wrench (optional) | 1. Metallic tool used for tightening the plastic locking ring when installing the LW series on a panel. <br> 2. Tightening torque should not exceed $1.2 \mathrm{~N}-\mathrm{m}$ <br> ( $12 \mathrm{kgf}-\mathrm{cm}$ ) when tightening a locking ring. | LW9Z-T1 |
| Lamp Holder Tool (optional) | Rubber tool used for rep illuminated switches and <br> Ø0.452" <br> (ø11.6mm) $\square$ | OR-55 |
| Terminal Cover (for solder tab terminal) | Nylon cover for pushbuttons and selectors with solder terminals snaps onto contact block. <br> (Insert the lead wires through terminal cover holes before wiring.) | LW-VL2 |
| Terminal Cover (for screw terminal) | Nylon cover for pushbuttons and selectors for screw terminals snaps onto contact block. <br> (Insert the lead wires through terminal cover holes before wiring.) | LW-VL2M |
| Terminal Cover (for short body pilot light with solder tab terminal) | Nylon cover for short body pilot lights with solder terminals. | LW-PVL |
| Terminal Cover (for short body pilot light with screw terminal) | Nylon cover for short body pilot lights with screw terminals. | LW-PVLM |
| Rubber Mounting Hole Plug | Black rubber plug fills unused 22 mm panel cutouts. | OB-31 |
| Metallic Mounting Hole Plug | 1. Used for plugging unnecessary mounting holes in the panel. Tighten the attached locking ring to a torque of $1.2 \mathrm{~N}-\mathrm{m}(12 \mathrm{kgf}-\mathrm{cm})$ maximum 2. Degree of Protection: IP66 | LW9Z-BM |
| Replacement Marking Plates | White plastic engraving plate for use on all illuminated units (included in each lens). <br> May be used to capture printed mylar insert (not supplied by IDEC) under lens face. | $\begin{aligned} & \text { LW9Z-P1-W } \\ & \text { (round) } \end{aligned}$ |
|  |  | LW9Z-P2-W (square) |
| Anti-Rotation Ring | Prevents rotation of switches in panel. (included with all assembled switches and operators) | LW9Z-L |
| Replacement Keys | One pair of keys. (\#231) | KG9Z-SK |

For replacement lamps, see previous page.

$P C$ board terminal $=1.014^{\prime \prime}(26 \mathrm{~mm})$
Screw terminal $=1.014^{\prime \prime}(26 \mathrm{~mm})$

## Replacement of Lens \& Marking Plate

## Removing

1. Remove the operator (lens, marking plate, and lens holder) by inserting a screwdriver into the recess of the lens through the bezel.

2. Remove the marking plate by pushing the lens from the rear to disengage the latches between the lens and the lens holder, using the screwdriver as shown below.

The translucent filter in the lens holder can
not be removed because this filter is sealed to
make the unit waterproof and oiltight.
Installing
For round lens types, place the marking plate on the lens holder with the antirotation projection engaged and press the lens onto the lens holder to engage the latches. For square lens types, insert the marking plate into the lens, and press the lens onto the lens holder to engage the latches.
Pay attention to the orientation of the marking plate.

For Square Lens

## Replacement of Lamps

Lamps can be replaced using the lamp holder tool (OR-55) from the front of the panel. Also by removing the contact block from the operator unit, the lamp can be replaced.

## Replacement of Lamps from the Front of the Panel.

## (How to Remove)

1. Push and turn the lamp counterclockwise using the side A of the lamp holder tool, and the lamp and the lamp holder can be removed.

## (How to Install)

1. Insert the lamp into the lamp holder tool and hold the lamp as in the following illustration.

2. Place the insertion guide of the lamp and the groove in the operator unit in
the same direction. Then push the lamp lightly and turn it clockwise.

Replacement of Lamps by Removing the Contact Block
The lamp can be replaced by removing the contact block without using the lamp holder tool.

## Marking Plates \& Films

For LW series illuminated pushbuttons and pilot lights, legends and symbols can be engraved on marking plates, or printed mylar can be inserted under the lens for labelling purposes.

## Marking Plate and Marking Film Size

| Lens Style | Round Lens | Square Lens |
| :---: | :---: | :---: |
| Built-in <br> Marking Plate |  |  |
|  | Engraving must be made on the engraving area within 0.02 " $(0.5 \mathrm{~mm}$ ) deep. <br> The marking plate is made of white acrylic resin. |  |
| Applicable <br> Marking <br> Film |  | cicien |
|  | Mylar for printing labels are not included and must be provided and printed by user. <br> Two 0.004 " ( 0.1 mm )-thick films or one 0.008 " $(0.2 \mathrm{~mm})$-thick film can be installed in the lens. Recommended marking film: Mylar |  |

Insertion Order of Marking Plate \& Film

Insertion Order of Marking Plate \& Film.

1. Mylar is not included.
2. Pay attention to the orientation of marking plate.

Instructions con't

## Panel Mounting

Remove the contact block from the operator. Insert the operator into the panel cut-out from the front, then install the contact block to the operator. Removing the Contact Block
Turn the locking lever on the contact block in the direction opposite to the arrow on the housing. Then the contact block can be removed.
Installing the Contact Block
Insert the contact block, with the TOP markings on the contact block and the operator placed in the same direction. Then lock the units, turning the locking lever in the direction of the arrow.

## Notes on Mounting

Use the optional Ring Wrench (LW9Z-T1) to mount the operator onto a panel. Tightening torque should not exceed $1.2 \mathrm{~N}-\mathrm{m}(12 \mathrm{kgf}-\mathrm{cm})$. Do not use pliers. Excessive tightening will damage the locking ring.

## Wiring

1. Solder the terminals within $20 \mathrm{~W} / 5$ seconds or $260^{\circ} \mathrm{C} / 3$ seconds without exerting external force to the terminals. While soldering, do not touch the soldering iron to the housing. While wiring, prevent tension from being applied to the terminals. Do not bend or raise the terminals, nor exert excessive force
to terminals.
2. Use a non-corrosive resin liquid flux.

## Collective Mounting

As the locking lever can be turned easily from the rear of the units using a screwdriver, the contact blocks can be removed even when mounted collectively.

## Notes for Terminal Cover

## (Solder/Tab Terminal)

Insert the terminal cover into the contact block with the TOP markings on the contact block and the terminal cover in the same direction.
॥ll When wiring, insert the lead wires into the terminal cover holes before wiring.

## Notes for Wiring

When installing a terminal cover onto the solder/tab terminal contact block, solder the inșide of lamp terminal (toward the switch terminals) and wire. (Screw Terminal Type)
Install a terminal cover to the control unit before wiring.

1. After wiring, terminal covers cannot be installed.
2. When terminal covers are used, round crimping terminals cannot be used.

## Connection

Positive-lock connector and easy-lock connector are applicable to tab terminals.

## One Board Mounting

Mounting the switches and pilot lights on one PC board offers the following features.

1. Reduced installation labor, easy wiring, space saving, and standardization.
2. Since the contact blocks on the PC board can be removed easily using a locking lever, the LW series switches and pilot lights are easy to maintain.
3. Because the LW series switches and pilot lights require no studs for fastening the control unit to a PC board, special preparation of operation panel is not needed.
For details on one board mounting, contact IDEC.

Light Touch And High Reliability

Operating-force Snap Switching Mechanism

[^0]:    4
    If excessive voltage is applied (over 50V), the lamp may blow and the lens holder may pop out.

[^1]:    LED lamps contains a built-in current-limiting resistor and reverse polarity protection diode.
