

VSD Series II Variable Speed Open Drives

Description

The Johnson Controls® VSD Series II Variable Speed Open Drives, powered by Eaton® technology, are specifically engineered for HVAC, pump, and fluid control applications. The ultra-efficient DC capacitor and power structure allows the drives to consume less energy, lowering greenhouse gases.

The I/O configuration is designed with wiring ergonomics in mind by including removable terminal blocks. The main, easily removable, control board used for all drive frames with six digital IN, two analog IN, one analog OUT, three relay OUT, and two expansion slots for I/O or communication boards. In addition, the control board has built-in RS-485 and Ethernet communication.

These drives continue the tradition of robust performance and raise the bar on features and functionality, ensuring the best solution at the right price.

VSD Series II Variable Speed Open Drives are selected using VSD Series II code numbers and standard Johnson Controls order entry tools.

Refer to the *VSD Series II Variable Speed Open Drives Product Bulletin (LIT-12011824)* for important product information.
