

VSD Series II Variable Speed Micro Drives

Description

Johnson Controls® VSD Series II Variable Speed Micro Drives (JC-VSM II) are the next generation of drives specifically engineered for today's HVAC mid-market applications. These micro-processor-based drives have standard features that can be programmed to tailor the drive's performance to suit a wide variety of application requirements. The JC-VSM II product line uses a 32-bit microprocessor and insulated gate bipolar transistors (IGBTs) that provide quiet operation, high efficiency, and smooth low-speed performance for three-phase induction motors. The size and simplicity of the JC-VSM II makes it ideal for hassle-free installation. Models rated at 575 volts, three-phase, 50/60 Hz are available in sizes ranging from 1 to 7-1/2 hp. Models rated at 480 volts, three-phase, 50/60 Hz are available in sizes ranging from 1/2 to 10 hp. Models rated at 230 volts, single or three-phase, 50/60 Hz are available in sizes ranging from 1/4 to 3 hp, 230 V three-phase output. Models rated at 115 volts, single-phase, 50/60 Hz are available in 1/4 to 1-1/2 hp, 230 V three-phase output.

The standard drive includes a digital display, and operating and programming keys on a visually appealing, efficient application programming interface. The display provides drive monitoring, as well as adjustment and diagnostic information. The keys are used for digital adjustment and programming of the drive, as well as for operator control. Separate terminal blocks for control and power wiring are provided for customer connections.
