

Axis High Power over Ethernet midspans & splitters

High Power over Ethernet for Axis PTZ dome network cameras.

- > Reduced installation costs
- > Support for Axis PTZ dome network cameras
- > IEEE 802.3at
- > IEEE 802.3af compliance

Axis High Power over Ethernet midspans and splitters offer an easy, fast and cost-effective solution for powering network video products – specifically PTZ dome network cameras – without the need to install power outlets and electrical cabling.

Axis High Power over Ethernet (High PoE) midspans and splitters enable Axis network video products to receive data and power over the same Ethernet cable.

The High PoE products make it easier to install network video products in areas where power cabling and outlets are unavailable, thereby reducing installation costs.

These midspans and splitters are used to power network devices that require more power, as specified by the IEEE 802.3at standard. The midspans are also IEEE 802.3af compliant, meaning that they can be used with all Axis network video products with built-in PoE support.

The function of a midspan is to inject power into a network cable. A splitter, which separates data and power coming over an Ethernet cable, is used for a network video product without built-in support for PoE.
