## DUCT TEMPERATURE SENSORS

### INSTALLATION

**Inspection** Inspect the package for damage. If damaged, notify the appropriate carrier immediately. If undamaged, open the package and inspect the device for obvious damage. Return damaged products.

**Requirements**

- Tools (*not provided*)
  - Digital Volt-ohm Meter (DVM)
  - Appropriate screwdriver for mounting screws
  - Appropriate drill and drill bit for mounting screws
- Appropriate accessories
- Two #8 self-tapping mounting screws (*not provided*)
- Training: *Installer must be a qualified, experienced technician.*

**Warning:**

- Do not use on oxygen service, in an explosive/hazardous environment, or with flammable/combustible media.
- Disconnect power supply before installation to prevent electrical shock and equipment damage.
- Make all connections in accordance with the job wiring diagram and in accordance with national and local electrical codes. Use copper conductors only.

**Caution:**

- Use electrostatic discharge precautions (e.g., use of wrist straps) during installation and wiring to prevent equipment damage.
- Avoid locations where severe shock or vibration, excessive moisture or corrosive fumes are present. NEMA-4 housings are intended for outdoor use primarily to provide a degree of protection against wind-blown dust, rain, and hose-directed water.
- Do not exceed ratings of the device.

### Mounting

**Location:** Install the sensor in a location where it will sample the average air temperature in a duct. Avoid areas where the air is stratified because these areas can cause sensing errors.

**TE-701-A or B:** Refer to **Figure 4** for mounting dimensions.

1. Drill a 3/8-inch (9 mm) hole into the duct or plenum where the sensor will be installed.
2. Insert the sensor probe into the duct or plenum until the flange rests against the duct or plenum wall.
3. Use the flange as a template to mark and drill holes for two #8 self-tapping sheet metal screws (*not provided*).
4. Fasten the sensor to the duct or plenum wall with the sheet metal screws.
5. Make the wiring connections. Refer to **Figure 1**.

**Figure 1 - Installing the TE-701-A or TE-701-B Sensor**

**TE-701-C or D:** Refer to **Figure 5** for mounting dimensions.

1. Drill a 3/8-inch (9 mm) hole into the duct or plenum where the sensor will be installed.
2. Remove the mounting nut from the bulkhead fitting.
3. Insert the sensor probe into the duct or plenum until the bulkhead fitting rests against the duct or plenum wall.
4. Guide the nut along the probe and tighten against the duct or plenum.
5. Make the wiring connections. Refer to **Figure 2**.

**Figure 2 - Installing the TE-701-C or TE-701-D Sensor**

**TE-702-A, B, or C:** Refer to **Figures 6 & 7** for mounting dimensions.

1. Drill a 3/8-inch (9 mm) hole into the duct or plenum where the sensor will be installed.
2. Insert the sensor probe into the duct or plenum until the mounting bracket rests against the duct or plenum wall.
3. Use the mounting bracket as a template to mark and drill holes for two #8 self-tapping sheet metal screws (*not provided*).
4. Fasten the sensor to the duct or plenum wall with the sheet metal screws.
5. Loosen the cover screws and rotate the cover out of the way.
6. Make the wiring connections. Rotate and screw the cover back into place. Refer to **Figure 3**.

**CHECKOUT**

Allow the sensor to stabilize in the duct air stream for a minimum of five minutes before taking a resistance measurement.

1. Disconnect the sensor lead wires from the controller.
2. Connect an ohmmeter across the lead wires.
3. Ensure that nominal resistance measurements are in accordance with the resistance/temperature curves. (Refer to **Tables 1 & 2**. For complete **Resistance vs. Temperature** tables, please refer to **TI.700-11** - Temperature Sensor section.)
4. Reconnect sensor lead wires to the controller.
5. Check operation of the complete control system.

**MAINTENANCE** Regular maintenance of the total system is recommended to assure sustained optimum performance.

**FIELD REPAIR** None. Replace with a functional unit.
