A panel interface connector(PIC) is a device that typically mounts to the outside of a control panel housing a PLC, computer, or other type of programmable device. Once in place, the PIC, which houses convenient pass through connections, allows quick, easy, safe access to the controls inside the cabinet.

## Benefits of PICs

- The ability to quickly interface directly with the contents of the cabinet without opening the main cabinet door
- Easily match the communication system of programmable components, with thousands of component options
- Avoid potential safety hazards, such as Arc Flash, associated with opening a panel under load
