# **Description of Sensor Function**

The ultrasonic sensor transmits ultrasonic packages in quick succession and responds to their reflection off the detected object. It has a frequency output that delivers a square wave signal. The frequency of this signal changes linearly with the distance of the object. Two frequency ranges are available.

# **Description of the Frequency Selection**

Proceed as follows to select the frequency range:

### Standard frequency 70 ... 500 Hz

- 1. Connect terminal ET to  $+U_B$  or leave it open.
- 2. Switch on the operating voltage.
- 3. The sensor will be ready for operation after 3 seconds.

# Low frequency 35 ... 250 Hz

- 1. Connect terminal (ET) to -U<sub>B</sub>.
- 2. Switch on the operating voltage.
- 3. The sensor will be ready for operation after 3 seconds.

ET	unusable area	Sensing range 35 250 mm	> 250 mm or no object
Open or +U <sub>B</sub>	Undefined	70 500 Hz	500 Hz
-U <sub>B</sub>	Undefined	35 250 Hz	250 Hz

### Note:

Switching the potential on ET during operation will not change the frequency range.

# **Safety Note**

The use of this device in applications, where the safety of persons depends from the devices function, is not allowed!
