Pfannenberg
ELECTRO-TECHNOLOGY FOR INDUSTRY

Critical Thermal Management Solutions for Maximum Uptime & Efficiency

Why Pfannenberg?

For more than 60 years, we have been helping guarantee production safety for companies throughout the world. Our mission is to satisfy the increasing demands of modern industries by developing progressive ideas for the protection of electronics. This led to the invention of the Filterfan® and other innovations in the field of thermal management for electrical enclosures and process cooling.

A spirit of invention and German engineering genius are not our only strengths. We are also proud of the close relationships we maintain with our clients and their industries.

Pfannenberg's broad experience in delivering individual thermal management solutions positions us to provide unique, innovative benefits to our clients. Through our wide product range and a consultative team approach we develop customized high quality, cost effective, energy efficient solutions for demanding industrial requirements. This is the real value for our customers.

This catalog represents a new format for our products and services. We can provide the proper solution for any type of application. Included are our most widely requested products for North America and an overview of our comprehensive solution-orientated consultative successes, industry group applications and worldwide services.

To learn more about how we can help you, contact us today. As one of the few companies around the world to have developed and produced a complete range of industrial thermal management solutions in-house, we have a wide range of expertise to share with you.

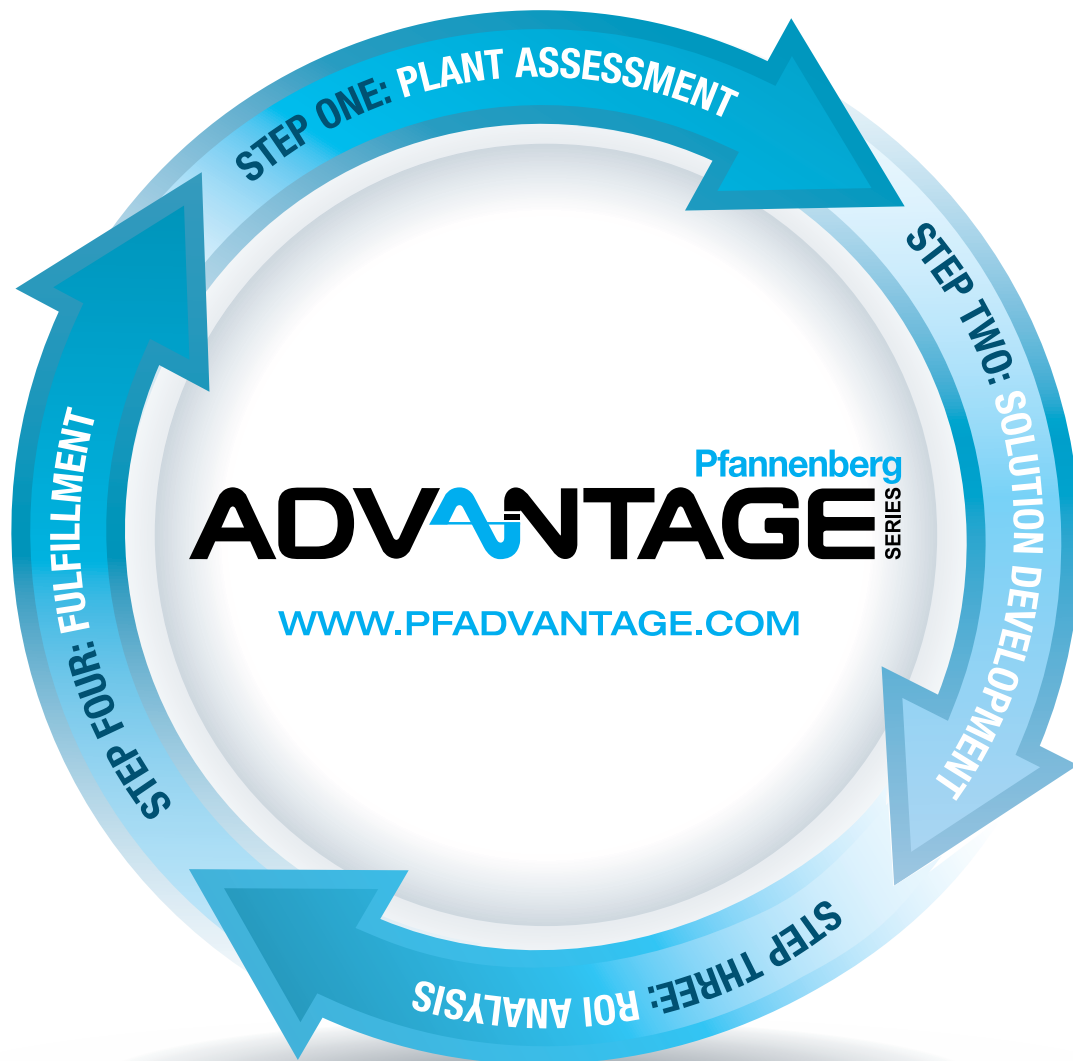

True to our motto "Sharing Competence", we place the knowledge and technical expertise of our engineers and experts at your disposal so that you can find the best possible solutions for your requirements. Today and in the future.

What can we do for you?

Andreas Pfannenberg, CEO

WHAT IS THE PFANNENBERG ADVANTAGE™?

The Pfannenberg Advantage™ follows a results-driven, four-step process that begins and ends with the user.

It's a value proposition which provides solutions to problems encountered by the automation user (plant) that are associated with thermal management products. It allows Pfannenberg to take the experience gained in supplying these products to the machine builder and extend it to the point of use where it can be applied to meet specific challenges, and/or to take advantage of specific opportunities.

Step One: Plant Assessment

Pfannenberg's field engineering team visits the facility to meet with plant personnel and survey the application in order to fully understand specific thermal management challenges

Step Two: Solution Development/ Product Selection

Factory and field personnel work together to develop an application-specific solution using the best products and practices available to meet process requirements.

Step Three: ROI Analysis

Savings associated with energy usage, maintenance, "up-time", etc. are quantified and compared to total project costs to verify solution feasibility.

Step Four: Fulfillment

The complete solution is implemented through the coordinated efforts of an experienced team of factory engineers and local partners, from installation, commissioning & training to preventative maintenance & life cycle service.

The longevity of critical electronics is ensured with proper enclosure climate control.

Electrical enclosures house high performance components that are critical for the control of today's production processes. These electrical components generate a significant amount of heat. Imagine the consequences when sensitive circuitry, VFDs and PLCs begin to overheat. If not properly managed this high heat leads to premature aging of electrical components and eventual shutdown of systems, leading to downtime and loss of revenue.

To ensure that sensitive electronics maintain their rated life expectancy and that they function reliably, proper regulation of the enclosure climate is necessary. Electronics are typically most efficient in an environment

where the humidity is low and the temperature is approximately 95°F. As the temperature in an enclosure rises it can have a lasting effect on the electronics. Tests have shown that an increase in temperature of as little as 18°F shortens the life expectancy of electrical components by more than 50%.

Proper thermal management is necessary. This prevents critical temperature fluctuations, avoids overheating and protects against the formation of condensate. It is essentially the backbone of your entire production process, prolonging the life of your electronics and protecting your investment.

The life expectancy of capacitors fall as the ambient temperature increases.

An increase in temperature of 18°F shortens the life time of electrical components by more than 50%.

Outside the “box” thinking is vital to protect the electronics inside.

A properly selected thermal management solution requires not only an understanding of the climate inside the enclosure but also the environment outside of the enclosure.

It is the ambient conditions around the outside of the enclosure that can have a direct effect on the best thermal management solution chosen for your application.

The environment in the electrical enclosure can be affected by weather conditions, solar radiation or other external temperature sources.

For example: An enclosure placed in an environment that is hostile to a cooling unit may require an air to

water heat exchanger. An air to water heat exchanger is not susceptible to the effects of dust and debris that would typically foul a standard air conditioner.

Electronics sensitive to electromagnetic interference, may need a shielded EMC Filterfan®.

An enclosure located outdoors or in a humid environment may require a hygostat or thermostat and a heater to eliminate the formation of condensate, leading to corrosion and short circuiting.

Contact one of our applications engineers or use our sizing software online at pfannenbergsusa.com/pss to determine the proper thermal management solution.

Both internal thermal losses and external conditions make thermal management necessary.

Determining the correct thermal management products for your application.

3 Basic Cooling Methods for Enclosure Cooling:

It is important to understand the types of cooling methods available and the how the ambient conditions may effect the product chosen. Choosing the wrong method may lead to a solution that is undersized or oversized, or fails due to being specified for incompatible ambient conditions.

1 Natural Convection

The use of louvers or grills with filters (see **PFA Exhaust Filters**) can be effective when the amount of heat being removed from your enclosure is minimal. This method usually provides less of a cooling effect than is necessary with today's components.

2 Forced Convection

If the installation will be in a clean, non-hazardous environment with an acceptable ambient (outside the enclosure) temperature range, a simple forced-air cooling system utilizing outside air is usually adequate. Combined with an air filter, such devices generally meet the heat removal needs of typical electronic equipment and many electrical applications. An example of forced convection air cooling is Filterfans®.

When can Filterfans® be used for Forced Convection Cooling?

- If the ambient temperature is always lower than the temperature required in the electrical enclosure, then Filterfans® represent an economical solution for thermal management of electrical enclosures.

Important for the use of Filterfans®:

- Use Filterfans® to force the surrounding air into the electrical enclosure, so that a slight overpressure builds up inside the enclosure.
- The surrounding air enters the electrical cabinet exclusively via the Filterfans®, which ensures that it is filtered.
- Install the Filterfans® in the lower third of the electrical enclosure and the exhaust filter as close to the top as possible. This assists the natural convection of the air and avoids hot spots within the enclosure.

3 Closed-loop Cooling

In harsh environments involving high temperatures, wash-down requirements, heavy particulate matter or the presence of chemicals capable of damaging components (NEMA 4 or 12 environments), ambient air must be kept out of the enclosure. Closed-loop cooling consists of two separate circulation systems. One system seals out the ambient air, cooling and re-circulating clean, cool air throughout the enclosure. The second system uses ambient air or water to remove and discharge the heat. Example of closed-loop cooling equipment employed with electronics and process controls are cooling units and heat exchangers.

When are cooling units necessary?

- If cooling cannot be accomplished by the outside air.
- If the temperature required inside the electrical cabinet should be equal to or lower than the ambient temperature.
- If the ambient air is strongly contaminated with oil or conductive dust.
- When higher ingress protection is required (Type rating).

Important for the use of cooling units:

- Ensure a good supply of air intake and outtake from the external circuit of the cooling unit, so that thermal energy can be transferred to the surroundings.
- The lowest temperature inside the enclosure may not necessarily be the best. The 95 °F (35 °C) preset by Pfannenber represents a good compromise between service life and the accumulation of condensation.

When should air to air heat exchangers be used?

- If the panel temperature is allowed to be higher than the maximum ambient temperature.
- If vapors, particulates or other foreign materials in the environment that must not be allowed to penetrate the enclosure.
- Important for air/air: Air to air units have performances that are rated on the difference in temperature between the ambient and enclosure. This makes this solution ideal for equipment that can take high temperatures or systems in environments with modern ambients.

When should air to water heat exchangers be used?

- If a chilled water supply is available.
- If the ambient air cannot be used to provide cooling.
- If a very high IP class is required (up to IP 65).
- If a maintenance-free cooling solution is desired.
- If looking for an energy efficient "green" solution.

Using Chillers for efficient equipment and process cooling.

Understanding How a Chiller Works:

A chiller uses a refrigeration cycle to remove the collected heat from a circulating liquid. As the liquid moves through a system of tubes and pipes it absorbs the heat generated by equipment and processes. This generated heat is then transferred by the liquid back to the chiller where it is dissipated. Fluid is cooled and sent back into the system.

When can a chiller be used for thermal management?

- When higher heat loads that exceed traditional enclosure cooling methods need to be managed.
- When precise temperature control is required as part of the manufacturing process.
- Large fluctuations in heat load requirements need to be managed.
- When efficient cooling is desired, liquid is more efficient for cooling vs. air.
- It allows the source of cooling to be located separately from harsh environments.

Important for the use of Chillers:

- Chillers can be installed indoors if the area around the unit is relatively clean and the air is temperate.
- Locating the chiller outside can be a good option and can improve the efficiency of the chiller depending on temperature.
- Extreme temperatures can cause capacity issues or the need for additional options such as a low ambient package.
- A chiller should be sized as close to the required capacity based on the desired chilled liquid supply temperature and the highest expected ambient temperature.

CHILLER APPLICATION EXAMPLES

 Automotive (Manufacturing)	 Food & Beverage	 Renewable Energy
Spindle Motor Cooling – High speed spindles need continuous cooling to insure accuracy and motor life. Temperature control of the tooling is required for high precision cutting applications.	Pouch Sealer Cooling – The heat used to melt the pouch material must be dissipated to allow the joined materials to cool and create the seal before moving the pouch. Efficient liquid cooling accommodates this high speed process.	Solar Inverter Cooling – Power inverters are used to convert the DC power created by solar collectors to the AC power that can be transferred to the power grid. Inverters lose up to 3% of their rated capacity in the form of heat and liquid cooling provides reliable thermal management to keep this renewable energy source on line.
Cutting Oil Cooling – Temperature control of the work piece in machining applications is needed to control dimensions. Chillers provide cooling of the recirculated and filtered cutting oil.	Mold Cooling (Injection, Thermoforming, Blow Molding) – Plastic molding involves melting (heating) the material to allow it to take the shape of the mold and then solidifying (cooling) it before the mold is opened so the shape is maintained. The use of chilled water allows rapid cooling of the molds between heating cycles in this high speed process.	Hydrogen Fuel Cell Compressor Cooling – A byproduct of raising the pressure of hydrogen gas for use in fuel cell “engines” is the heat associated with compression. Recirculated chilled water manages the temperature of both the hydrogen gas and the mechanical compressor.
Hydraulic Oil Cooling – Hydraulic power systems are often the primary driver in manufacturing processes. The heat added to the oil by the hydraulic pump is removed by the chiller either directly, or through an intermediate heat exchanger.	Baking Process Cooling – Control for baking processes are normally subjected to the high air temperature and flour-laden environment of the oven system. Cooling control enclosures with chilled water keeps process controls operating in these “hostile” areas.	Storage Battery Cooling – Heat is created in the electrochemical process associated with the storage of electrical energy. Maintaining the temperature of the cells by removing this heat increases the overall efficiency of the storage system. Liquid cooling provides a convenient solution regardless of ambient conditions.
Polyurethane Foam Mixer – Cooling is required to remove the heat created by the mixing of the two chemicals in this process. The chiller also provides cooling for the high pressure pumps needed to convey the foam product.	Glass Inspection Camera Cooling – The inspection of glass bottles takes place in immediate proximity to this extreme high temperature process. Inspection cameras include a liquid cooled housing that protects the sensitive optics.	
 Automation Control Cooling		
Automation Control Cooling – Variable frequency drives (VFDs) are used to precisely control the motion in highly automated manufacturing and packaging processes. VFDs can lose up to 3% of their rated capacity in the form of heat, so the enclosures that house them must be continuously cooled. As these enclosures are usually located close to the process machinery, cooling with recirculated liquid provided by a Pfannenberg packaged chiller offers an efficient, low maintenance solution regardless of the process environment.		

Combining products to create a complete system solution.

Chillers and PWS Air/Water Heat Exchangers

Use the combination of chillers and air/water heat exchangers to simplify the cooling of your processes, machines and controllers as part of a system based solution. Via a closed pipeline system that uses a highly economical supply of cooled liquid (e.g. water, glycol or oil) as the cooling medium, temperature can be managed within your process and as the cooling medium for the air conditioning of control cabinets. When cooling cabinets with PWS Air/Water Heat Exchangers the thermal management is 100% independent from the ambient temperatures at the installation location.

PWW Water to Water Heat Exchanger and Chiller

PWW units are ideal for use within a system when the available coolant from a chiller needs to be separated from process equipment.

An example of this would be regulating the temperature of a liquid cooled drive. Using 2 separate closed loop systems, one that cools the drive using a PWW Water to Water Heat Exchanger and one that cools the PWW using liquid from a separate chiller. Heat is exchanged between the 2 systems, tempering the coolant delivered to the drive so that the liquid is not too cold causing thermal shock or excessive condensation.

Filterfans® and Thermostats

When combining a Pfannenberg thermostat with a Filterfan®, the fan can be controlled to turn on and off based on the temperature inside the cabinet.

The benefits to this combined system are:

- Extended fan life.
- Reduced energy consumption.
- Reduced consumables and maintenance.

Improving performance, lowering costs and providing greater reliability in your manufacturing processes and bottom line.

Cooling Units, Heaters, Thermostats and Hygrostats

Adding an accessory such as a heater or thermostat to an enclosure with a cooling unit can help protect electronics from being exposed to temperatures below the recommended operating range. Another benefit to using a heater and thermostat in an enclosure is to protect from the formation of condensation within the cabinet. In a very humid environment where condensation may form at higher temperatures the hygrostat will control the heater based upon relative humidity. As a system; cooling units, heaters, thermostats and hygrostats will ensure that the environment within the enclosure is ideal for performance and service life of the critical electronics.

PSS - Pfannenberg Sizing Software

Online step-by-step product selection tool.

Need Help? Use our free software to find the recommended thermal management solution for your application.

Our Thermal Management will guide you through the sizing process, step-by-step to calculate the correct solution for your application. The sizing software is available at: <https://www.pfannenberguna.com/pss>

Also available as an app for iOS and Android. Search for Pfannenberg

Use your smartphone or tablet's QR Code Reader to access the web version of our sizing software. May not be compatible on all devices. You may also download an app version from the App Store or Google Play.

Proper thermal management is key to saving resources and keeping electronics (and machinery) up and running on a consistent basis. To provide the best thermal management engineering support in the industry, Pfannenberg has developed a powerful web-based sizing application containing an easy-to-use interface. The software can be customized to your applications by allowing you to enter your own components and enclosure styles in the database for easy and fast calculations. The software also accounts for indoor/outdoor applications and assists in calculating heat dissipation within enclosure cabinets.

PF/PFA Series Filterfans 4.0™ and Exhaust Filters

Trust in the Original

Otto Pfannenber's invention of the Filterfan® in 1958 was a milestone in the area of industrial thermal management. As a result of over 50 years of experience and continuous development, Pfannenber's Filterfans® have evolved into the trusted name for forced convective cooling to circulate and cool the air in your cabinets.

With our flow optimized fins and rotor blades, the Filterfan 4.0™ reaches a particularly high airflow and at the same time provide an IP 55, Type 12 system of protection. The flat-profile, uni-colored design complements modern machines and plants.

Pfannenber's patented click mechanism on our Filterfans 4.0™ have a unique patented 4-corner fastening system enabling safe and quick, tool-free installation allowing the filter medium to be replaced in seconds.

The fluted filter mat's folded structure provides an unrivaled airflow guaranteeing NEMA Type 12 protection, while also extending the filters lifetime 300% longer than conventional filter.

All in all, our Filterfans 4.0™ contain 11 field-proven patented features.

THE TECHNOLOGY OF COOLING

Cooling with Filterfans®

If the installation will be in a clean, non-hazardous environment with an acceptable ambient (outside the enclosure) temperature range, a simple forced-air cooling system utilizing outside air is usually adequate. Combined with an air filter, such devices generally meet the heat removal needs of typical electronic equipment and many electrical applications.

How do I know if a Filterfan® is the right product for my application?

- If the temperature rise inside the enclosure can be higher than the ambient.
- If multiple configurations are needed. Filterfans® can be located in a number of locations within complex enclosure configurations.

Utilizing Filterfans®

- Always use the Filterfans® to propel the cool ambient air into enclosure.
- Slight positive pressure builds up inside the cabinet so that only air filtered by the Filterfans® flows into the enclosure.
- The air propelled into the cabinet displaces the warm air which exits through the exhaust filter.
- When installing a combination of Filterfans® and exhaust filters, fit the Filterfans® in the lower third of the cabinet and the exhaust filter(s) near the top of the cabinet.

Calculating the required airflow

To properly size a Filterfan® it's important to understand how static pressure effects the performance of a fan. See [Understanding CFM](#) on the opposite page.

$$V = \frac{1.82 (P_D)}{\Delta T} \text{ [cfm]}$$

- **V[cfm]:**
Airflow volume of Filterfans®
- **P_D [Watt]:**
Dissipation loss: Thermal power generated inside a cabinet by the dissipation loss of components
- **ΔT[°C]:**
Difference in temperature between the ambient and inside the electronic cabinet

FILTERFANS 4.0™

Filterfans® / Exhaust Filters

Trust in the Original. Otto Pfannenberg's invention of the Filterfan® in 1958 was a milestone in the area of industrial thermal management. Today Pfannenberg provides a wide range of different solutions for industrial thermal management and is thus one of the few specialists that can provide the appropriate devices for virtually all industrial requirements – worldwide.

NEMA Type 12 Protection

The closed frame design prevents unfiltered air from penetrating the cabinet.

Highest Quality Fans

German manufactured fans that exceed industry standards for quality, performance and service life.

Highest System Airflow Compared to Competitors Filter Fans.

The design of the louvers supports the greatest airflow while further protecting against airborne dust and dirt.

Patented Tool-Less 4 Corner Fastening System

The patented fastening system allows for fast installation (possible to install in seconds) and easy removal reducing MTTR.

Aesthetically Pleasing Design Using Neutral Colors

Available in a standard RAL 7035 Grey and an optional Black color. These units blend in well with the modern styles and colors used for existing machines and systems.

300% Longer Service Time via Patented Fluted Filter Mat

A larger surface area on the filter mat allows for a high filtration level, greater service life and maximum airflow. Saving time and money.

Versatile Options

Options including UV Protected Plastic for use in direct sunlight, EMC shielding to attenuate RF signals and exhausting fans for custom applications.

Globally Compatible

ERP compliant to meet European efficiency directives. Units also comply with additional national and international standards, e.g. TÜV, NEMA, UL, CSA and EAC.

DID YOU KNOW?

Installing a thermostat with a Filterfan® can save energy and extend the service life of the Filterfan®.

Pfannenber's FLZ 530 Thermostats are designed to work directly with our Filterfans®. This provides efficient operation of the Filterfan® based on the temperature setting leading to greater reliability within the production process.

For additional thermostat models please visit the Heaters & Thermostat section found within this catalog.

Energy Savings Solution

FLZ Series Thermostats

Model number	Range	Part Number RAL 7035 (Light Grey)
FLZ 530	0-60 °C	17121000000
	32-140 °F	17121000010

DID YOU KNOW?

That if you need to install a Filterfan® in an environment that requires additional protection from the weather or a direct water spray, Pfannenberg offers protective hoods. These NEMA 3R/4 Rain Hoods offer protection from falling water, snow/ice and washdown spray with minimal airflow reduction. The hoods are available in light grey or dark grey to match your enclosures and a 4X stainless steel option. **Note: This technique will not prevent hazardous gases or humidity from entering the cabinet.**

Turn to page 27 for an overview of our new and improved rainhoods.

PF SERIES

FILTERFANS 4.0™

PF 42500

- Airflow rate up to 94 CFM
- System of protection IP 55, NEMA type 12
- Cut-out dimensions: 223 x 223 mm

DID YOU KNOW?

Untreated plastics exposed to continuous sunlight will experience UV degradation; becoming damaged, cracked and brittle. Pfannenber's specially treated IP55 UV-Resistant Plastic Filterfans® and UV-Resistant Plastic Exhaust Filters are the best option for use in outdoor applications exposed to the sun.

Protect your investment, reduce maintenance costs and extend the life of the product.

Available in PF 22000 - PF 67000 series models. Just add "UV" to the model number when ordering.

PF SERIES

FILTERFANS 4.0™

PF 65000

- Airflow rate up to 297 CFM
- System of protection IP 55, NEMA type 12
- Cut-out dimensions: 291 x 291 mm

DID YOU KNOW?

Installing a standard intake Filterfan® lower than the exhaust filter is the most efficient method for removing heat from an enclosure. There are times when the placement of internal electronics prevents this type of installation. You can flip the fan in the field or you can order reverse flow Filterfans® that exhausts air from the upper portion of the enclosure. This process creates a partial vacuum allowing air to be drawn in through a PFA Exhaust Filter maintaining the same system airflow. Reverse Filterfans® can also be used in series with intake Filterfans® to increase airflow through the system.

Reverse flow Filterfans® are available for all models. Just add "A" to the model number when ordering. Consult factory for 11 digit part number.

PF SERIES

FILTERFANS 4.0™

PF 66000

- Airflow rate up to 462 CFM
- System of protection IP 55, NEMA type 12

DID YOU KNOW?

Pfannenber's Filterfans 4.0™ were developed and optimized after more than 1,000 tests in our modern test laboratory. Our engineers use specially designed climate chambers to test and measure the capabilities of our thermal management products.

PTF SERIES

ROOF MOUNT FILTERFANS®

PTF 60500

- Airflow rate up to 206 CFM
- Tool-less mounting, patented quick fastening system
- System of protection IP 54, NEMA type 12
- Cut-out dimensions: 291 x 291 mm

PTF 60500 ROOF MOUNT FILTERFANS®

Available voltages ± 10%	115 V, 230 V
Design (housing and protection against accidental contact)	sheet steel, cover powder-coated; snap-in housing made of injection-molded thermoplastic (ABS-FR) self-extinguishing, UL 94 VO
Service life L ₁₀ (+ 40 °C)	approx. 50,000 h
Weight	5.5 lb
Color	RAL 7035 (Lt. Grey)
Noise level (EN ISO 3741)	67 dB (A)
Type of connection	terminal strip
Bearing type	ball bearing
Approvals	UL, cUL, CE, (on request: GOST)
Power consumption	4 x 24 W / 4 x 29 W

Width x Depth x Height	16.93 x 16.93 x 4.92
System of protection (EN 60529 / UL 50)	IP 54
Filter mat quality class	G 3
Unimpeded airflow	206 CFM
Airflow rate in combination (PF + PFA 60.000)	142 CFM
Filtration efficiency	81% 0%

Part no. * (115 V)	11685151055
Part no. Spare part filter mats (20 pieces)	18611600038

PTF 60700

- Airflow rate up to 324 CFM
- Tool-less mounting, patented quick fastening system
- System of protection IP 54, NEMA type 12
- Cut-out dimensions: 291 x 291 mm

PTF 60700 ROOF MOUNT FILTERFANS®

Available voltages ± 10%	115 V, 230 V, 400 / 460 V
Design (housing and protection against accidental contact)	sheet steel, cover powder-coated; snap-in housing made of injection-molded thermoplastic (ABS-FR) self-extinguishing, UL 94 VO
Service life L ₁₀ (+ 40 °C)	approx. 40,000 h
Weight	5.8 lb
Color	RAL 7035 (Lt. Grey)
Noise level (EN ISO 3741)	69 dB (A)
Type of connection	terminal strip
Bearing type	ball bearing
Approvals	UL, cUL, CE, (on request: GOST)
Power consumption	90 W / 80 W

Width x Depth x Height	18.5 x 18.5 x 5.51 in
System of protection (EN 60529 / UL 50)	IP 54
Filter mat quality class	G 3
Unimpeded airflow	324 CFM
Airflow rate in combination (PF + PFA 60.000)	218 CFM
Filtration efficiency	81%

PF/PFA EMC SERIES

EMC FILTERFANS 4.0™ / EXHAUST FILTERS

Protect your sensitive electronics from electromagnetic interference when cooling with Filterfans®. The use of a Filterfan® for thermal management requires an opening to be cut into the cabinet. These openings can allow electromagnetic radiation to pass in or out unhindered. **Pfannenbergs EMC Filterfans® offer the widest range of protection against electromagnetic interference.** We offer several combinations of EMC Filterfans® and exhaust filters for air flow rates from 17 to 560 CFM2. To better protect the environment, our EMC Filterfans® and exhaust filters do not use metalized plastics, because these are difficult to recycle.

EMC – Electromagnetic Compatibility

In standards, electromagnetic compatibility, or ‘EMC’ for short, is defined as the ability of a component, device or system to function satisfactorily under the influence of electromagnetic fields in its surroundings, without influencing its surroundings, to which other electrical equipment also belongs, in an impermissible way. We guarantee that our EMC shielded Filterfans® provide protection against electromagnetic interference by ensuring continuity between the shielding part of the fan and the metal structure of the cabinet based on the attenuation characteristics below:

Attenuation at 30 MHz approx. 71 dB

Attenuation at 400 MHz approx. 57 dB

Measured in accordance with EN 50 147-1 (1996): absorber rooms, part 1, measurement of screening attenuation.

Superior metal shielding
Unequaled worldwide: contact surfaces without beryllium-copper seal!

Contact springs

No elaborate reworking of the cut-out

- No adhering of copper tape or similar aids
- No time-consuming scratching off of coatings in order to ensure a good contact
- Contact is made via the cut edge of the cut-out for the Filterfans® or exhaust filter

FILTERFAN® RAINHOODS

NEMA 3R/4/4X/IPx6 WASHDOWN RAINHOODS

NEW

SANITARY RAINHOOD

Pfannenberg offers a specialty 4X stainless steel rainhood to meet the FDA compatible requirements found in Food & Beverage Manufacturing Facilities.

FILTERFANS 4.0™

Easy Installation

The mounting bracket can easily be installed to the enclosure around the existing cut-out.

Easy Maintenance

Easily remove the rain hood without tools for maintenance and filter mat replacement. (Optional tamper resistant fasteners available to eliminate unauthorized access)

Rugged Steel Construction

Powder coated or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

FDA Compatible White Gasket Design

Our white gasket design is ideal for Rainhoods that are used on enclosures in Food & Beverage applications. This gasket allows for easy detection of any contamination and is free of potentially harmful color additives.

Maximized Airflow & Superior Overspray Protection

Direct spray barrier allows for superior protection from overspray entering the cabinet, **while only reducing airflow <7%**.

NEMA Type 3R/4/4X / IPx6 Design:

This mounting system was designed to ensure a proper NEMA Type / IP rating and protection when used with Pfannenberg Filterfans® and exhaust filters.

Compatible with Existing Fan Cutouts

Rainhoods come in different sizes and are designed to be compatible with existing Pfannenberg Filterfans® and Exhaust Filters.

Robust Sealing Against Enclosure

A primary design element found within our rainhoods is the robust sealing of our gasket. Our gasket features multiple seal dams with a high compression ratio and dense closed cell material. This gasket is found in both our regular and sanitary designs.

Easy Washdown and Disinfection

With a smooth, clean and seamless design, Pfannenberg Rainhoods allow for easy washdown and disinfection. Direct spray barrier design allows for superior protection from overspray entering the cabinet while minimizing airflow loss.

INDUSTRY'S FIRST UL LISTED RAINHOOD SOLUTION

This technique will not prevent hazardous gases or humidity from entering the cabinet.

PAI 6043, 6133, 6203 Series **ECOOL** Air/Air Heat Exchangers

Efficient Cooling with Ambient Air

Cooling with ambient air is the most economical and energy efficient type of cooling. When ambient air is contaminated by dust, liquid or gases, the components which are integrated in the enclosure can be damaged if contact occurs. The use of a Filterfan® is therefore no longer recommended.

Pfannenber Air/Air Heat Exchangers are an ideal solution for these application areas with contaminated air. A dual air circuit design keeps complete separation of the internal and external air. The interior of the enclosure is thus hermetically separated from the atmosphere. Harmful dust, gas or fluids can no longer cause damage to the integrated components.

The robust steel construction of the air/air heat exchangers makes their operation in harsh industrial processes possible. Our **ECOOL** products feature a maintenance friendly design. Installation and maintenance of these units requires much less time compared to other closed loop products. The **ECOOL** Air/Air Heat Exchanger's feature an energy efficient, minimal maintenance design that is a proven solution in harsh environments.

THE TECHNOLOGY OF COOLING

Cooling with Closed Loop Air/Air Heat Exchangers

Air to air heat exchangers are used when the complete separation between the enclosure and the environment is required and the internal enclosure temperature to be cooled is higher than the ambient. The air to air units have a rating showing how much heat can be removed based on the difference in the ambient and the internal temperatures. This is traditionally rated on W/°C which is the **watts of heat that the unit can remove per temperature difference in °C**.

How do I know if an air to air heat exchanger is the right product for my application?

- If the temperature inside the enclosure can be higher than the ambient.
- If a total separation between ambient air and enclosure air is required.

Properly sizing an air to air heat exchanger

To properly size an air to air heat exchanger you must know the **required cooling capacity in Watts, target temperature rise over ambient and the dimensions of the heat exchanger and enclosure.**

$$\{Q_v = q_w \times \Delta T\}$$

- **Q_v [Watt]:**

Total performance of air to air heat exchanger.

- **ΔT [°C]:**

Difference in temperature between the ambient air and the air inside the electronics cabinet.

- **q_w [Watts/ °C]:**

Specific cooling capacity of the air to air heat exchanger.

Utilizing performance curves to properly size air/air heat exchangers:

Pfannenberg utilizes watts of heat that the unit can remove per temperature difference in °C. Customers should use their own application temperatures to determine the proper cooling capacity of the system.

Important information when utilizing air/air heat exchangers:

- The max ambient is 35 °C (95 °F) and the max internal temperature that the system can take is 45 °C (113 °F).
- Can be used when the temperature difference is 10 °C.
- If you apply this temperature difference to the rating of the air to air unit you will get the total amount of heat that can be removed.
- A unit rated 100 W/°C could remove 1000 Watts (100 x 10) of heat under these conditions.

AIR/AIR HEAT EXCHANGERS QUICK SELECTION CHART

Type	Specific cooling capacity	Rated voltage	Dimensions (HxWxD) inches (mm)	Approvals				Page

Cut-out compatibility with DTI series cooling units

Components in the enclosure are often updated due to the change in thermal management requirements. An air/air heat exchanger which was previously the optimal solution is not suitable any more. The refitting of an active **ECOOL** cooling unit can be carried out easily and without problems, because the units have the same cut-out dimensions. Thus, the process stability is also ensured after extensive modifications.

DTI Cooling Unit

PAI Air/Air Heat Exchanger

Why Pfannenber PAI Air to Air Heat Exchangers

- Tool-free assembly for partially recessed mounting.
- Tried and tested partially recessed mounting.
- Integrated handles makes it possible for one mechanic to assemble the device.
- Assembly possible in less than 3 minutes.
- Simple color matching.
- Robust front design.

- Temperature can be adjusted using the primary mechanical thermostat.
- The secondary thermostat can be used for an alarm, making optimal adjusting of the alarm limit possible.

- Tool-free retrofit of filter adapter.
- Tool-free filter change.
- Filter can be changed in less than one minute.

- Maintenance friendly.
- All fans are easily accessible from the outside.
- Not necessary to open the enclosure.
- Fan can be replaced in less than 6 minutes.
- Secure selection via PSS software.

PAI 6043/6133/6203

AIR/AIR HEAT EXCHANGERS

20 - 100 W/°C

The PAI series ECOOL Air/Air Heat Exchangers are ideal for the replacement of a Filterfan® solution when the ambient air is too contaminated to enter the cabinet. Available in 3 models; PAI 6043, PAI 6133 and PAI 6203, which are designed to be compatible with our European DTI Series cut-outs.

Energy Efficient

Ambient air is used for the thermal management of the enclosure.

Maintenance Free

Complete separation of the internal and external air flow and robust steel construction adapted to most environments (dust, solid particulate, vapors ...).

Rugged Design

One piece steel cover design for manufacturing environments which protects internal components.

Easy Electrical Installation

Pluggable connection allows for wiring to be done before the unit is installed.

Space Saving Integrated Design

Units have minimal depth of enclosure making door mounting feasible.

Easy Mechanical Installation

Tool free mounting. Can be mounted by one person with our spring plate design. This unit also features a mounting-friendly seal, no elaborate reworking of the mounting cut-out.

Optimized Airflow Design

Long air path design efficiently delivers cool air below the critical components while removing damaging hot air from the top of the enclosure. The high volume of air flow will eliminate hot spots.

Integrated Thermostats

Primary mechanical thermostat can be used to adjust temperature, saving energy. The secondary thermostat can be used as an independent alarm set point.

Filterless Design

Maintenance time can be minimized due to the wider fin spacing of the heat exchanger. If required, a filter can be added to the unit at any time for more protection in harsh environments.

Reduced Fan Maintenance

Life expectancy of fans exceed industry standards. When replacement is required both fans can be removed from the exterior to avoid lock out for maintenance and reduced MTTR.

*Note: The size listed on this page is for the PAI 6133. Please see the chart on the opposite page for the dimensions of our PAI 6043 and PAI 6203 Models.

Pleasantone

DTS 3000, DTT 6000 & DTI 6000 Series Cooling Units

Thermal Protection for Critical Electronics

Utilize closed loop cooling in tough industrial or outdoor applications with Pfannenberg's 'service-friendly' cooling units.

Pfannenberg's **DTS 3000 Series Cooling Units** are driven to meet the demands of our North American NEMA market. These units meet the needs of indoor NEMA Type 12 applications, NEMA Type 3R/4 outdoor applications and NEMA Type 4/4x stainless steel for washdown applications.

Pfannenberg's revolutionary designed **DTT Top Mount Cooling Units** offer unique protection through our innovative, patented condensate management system. These units can be safely installed above critical components with peace of mind.

The **DTI 6000 Series** allows for European-style recessed mounting on enclosure doors and/or side panels on modular systems. These "click & fit" units reduce installation times by more than 90%.

THE TECHNOLOGY OF COOLING

Cooling with Closed Loop Cooling Units

Pfannenberg cooling units operate on the principle of the Carnot cycle. This means that the cooling unit functions as a heat pump that “pumps” the thermal energy transferred from the electronic cabinet (heat dissipated from the components) up to a higher level of temperature (the ambient temperature can reach levels as high as + 55 °C). The air inside the enclosure is cooled down by the evaporator and at the same time dehumidified.

How do I know if a cooling unit is the right product for my application?

- If the ambient temperature is greater than the target internal temperature of the enclosure, active cooling is required.
- If a NEMA Type 12 to 4x rating is required - closed loop systems can maintain the NEMA Type rating of the cabinet.

Properly sizing a cooling unit

To properly size a cooling unit you must know the **required cooling capacity in Watts, mounting requirements (side, integrated or top mount)** and the **dimensions of the cooling unit and enclosure**.

$$\{P_C = P_D - P_R\} \quad \{P_R = C \times A \times \Delta T\}$$

• **P_C [Watt]:**

Refrigeration capacity of a cooling unit.

• **P_D [Watt]:**

Dissipation loss: Thermal power generated inside a cabinet by the dissipation loss of components.

• **P_R [Watt]:**

Radiant heat gain/loss: Heat transfer through the skin of the enclosure (insulation factor not included).

• **C [W/m²°C]:**

Coefficient of heat transmission.

• **A [m²]:**

Surface area of electronics cabinet.

• **ΔT [°C]:**

Difference in temperature between the ambient air and the air inside the electronics cabinet.

Utilizing performance curves to properly size cooling units:

Pfannenberg utilizes the DIN standard 35/35 °C when rating our cooling units. Many other companies use 50/50 °C, which provides a higher, non-usable value. Customers should use their own application temperatures to determine the proper cooling capacity of the system.

Note: Cooling capacity may vary between voltage and configurations.

Important information when utilizing cooling units:

- The refrigeration capacity should exceed the dissipation loss from the installed components by approximately 10%.
- The enclosure should be sealed to prevent the inflow of ambient air.
- Use the door contact switch to impede operation with open doors and consequent excessive accumulation of condensation.
- Use cooling units with maximum clearance between air inflow and air outflow to prevent poor circulation.
- Make sure that the air inflow and air outflow in the external circuit is not hindered, preventing proper heat exchanging at the condenser.
- When using top-mounted cooling units, make sure that components with their own fans do not expel the air directly into the cooling units cool air outflow.
- Make sure unit is level.
- Setting the temperature to the lowest setting is not the optimal solution due to the condensation issues. The value we have preset on the cooling unit is a sound compromise between cooling the inside of the enclosure and the accumulation of condensation.

COOLING UNITS QUICK SELECTION CHART

Type	Cooling Capacity Btu/h	Rated Voltage	Dimensions H x W x D Inches (mm)	Approvals				Page

DTS 3021/31/SS | COOLING UNITS

900 - 1300 Btu/h

The DTS 3021/31/SS series cooling units are ideal for small enclosures and for the cooling of hot spots in larger control cabinets. These units are particularly suited for the food industry and outdoor applications. Available in 3 models; **DTS 3021 (NEMA Type 12)** for indoor use, **DTS 3031 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3031 SS (NEMA Type 4/4x)** designed for wash-down applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

Condensate Drain Port

Permits effective collection and drainage of condensation.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Highest in Class Capacity

The compact, 7 inch width is ideal for small enclosures with a relatively small heat load.

Cooling Capacity Performance Curve

How to use this chart

Example: @ 95 °F (ambient, X-axis), @ 95 °F (internal, diagonal lines)
 = 1194 Btu/h cooling capacity (Y-axis)

Note: Cooling capacity may vary between voltage and configurations.

DTS 30X1 | COOLING UNITS

2000 - 3000 Btu/h

The DTS 30X1 series cooling units are ideal for small enclosures and for the cooling of hot spots in larger control cabinets. These units are particularly suited for the food industry and outdoor applications. Available in 3 models; **DTS 3041 (NEMA Type 12)** for indoor use, **DTS 3061 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3081 (NEMA Type 4/4x)** designed for wash-down applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

Highest in Class Capacity

The compact, 10 inch width is ideal for small enclosures with a relatively small heat load. The integral power cord helps simplify installation. An integral ingress filter is provided on type 12/3R/4 versions.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Optimized Condenser Designs

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F. High ambient options are also available to 140° F.

Easy to Maintain

Both the indoor and outdoor 30X1 cooling units include an integrated Pfannenberg PFA Exhaust Filter for simple replacement of the filter.

DTS 31X1 | COOLING UNITS

3000 - 4000 Btu/h

The DTS 31X1 series cooling units utilize a long internal air path to capture heat above the components and provide cool air below. Available in 3 models; **DTS 3141 (NEMA Type 12)** for indoor use, **DTS 3161 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3181 (NEMA Type 4/4x)** designed for washdown applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Self Protected from Harsh Environments

Our unit is uniquely designed to protect itself in NEMA 3R, 4, and 4X environments. An example of this is the location of our control electronics within our dry, cool interior circuit.

Maintenance Free, Filterless Design

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

Cooling Capacity Performance Curve

How to use this chart

Example: @ 95 °F (ambient, X-axis), @ 95 °F (internal, diagonal lines)
 = 4100 Btu/h cooling capacity (Y-axis)

Note: Cooling capacity may vary between voltage and configurations.

DTS 31X1SL | COOLING UNITS

3000 - 5000 Btu/h

The DTS 31X1SL series cooling units are designed to fit shallow enclosures vs 31X1 standard model. Available in 3 models; **DTS 3141 SL (NEMA Type 12)** for indoor use, **DTS 3161 SL (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3181 SL (NEMA Type 4/4x)** designed for washdown applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Maintenance Free, Filterless Design

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Self Protected from Harsh Environments

Our unit is uniquely designed to protect itself in NEMA 3R, 4, and 4X environments. An example of this is the location of our control electronics within our dry, cool interior circuit.

DTS 31X5 | COOLING UNITS

5000 - 7000 Btu/h

Our DTS 31X5 cooling units are an ideal solution for a wide variety of applications. These units are particularly suited for compact enclosures and are available in 3 models; **DTS 3145 (NEMA Type 12)** for indoor use, **DTS 3165 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3185 (NEMA Type 4/4x)** designed for washdown applications. Available options include a low ambient package and enclosure heater.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements.

Phase Protection

Three-phase 400/460 VAC powered units are protected from phase mis-wiring.

Pluggable power connection

Easily made without opening the chassis.

Easy Access Control Panel

Electrical controls are easily accessible with the flip down access panel.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

Lifting Lug Ports

Threaded holes accommodate the installation of lifting lugs to facilitate safe installation.

Self Protected from Harsh Environments

Our unit is uniquely designed to protect itself in NEMA 3R, 4, and 4X environments. An example of this is the location of our control electronics within our dry, cool interior circuit.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Maintenance Free, Filterless Design

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

New Narrower Footprint

Compact design delivers high cooling capacity to enclosures as small as 12 inches (300mm) in width.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F. High ambient options are also available to 140° F.

DTS 32X5 | COOLING UNITS

10000 - 13000 Btu/h

The DTS 32X5 series cooling units are one of our most popular and versatile cooling units, newly redesigned with our efficient micro channel condenser. Cutout footprint is compatible with our older 12,000 Btu/h cooling units, allowing for easy upgrade or replacement. Available in 3 models; **DTS 3245 (NEMA Type 12)** for indoor use, **DTS 3265 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3285 (NEMA Type 4/4x)** designed for washdown applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

Easy Access Control Panel

Electrical controls are easily accessible with the flip down access panel.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F. High ambient options are also available to 140° F.

Lifting Lug Ports

Threaded holes accommodate the installation of lifting lugs to facilitate safe installation.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Extra Protection from Water

The rain hood is a standard feature for NEMA 3R, 4, and 4X units. This hood provides protection from falling water and direct water sprays.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Micro Channel Condenser

Improves efficiency and durability.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfaffenberg proudly utilizes components which adhere to these requirements.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

Note: Cooling capacity may vary between voltage and configurations.

DTS 34X1 | COOLING UNITS

15000 - 20000 Btu/h

The DTS 34X1 series cooling units have the highest power to cooling ratio available on the market. These units are ideal for high heat loads, especially high horsepower drive enclosures. Available in 3 models; **DTS 3441 (NEMA Type 12)** for indoor use, **DTS 3461 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3481 (NEMA Type 4/4x)** designed for washdown applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Dual Condenser Fans

Offer partial redundancy in a large capacity to size ratio. Micro channel condenser improves efficiency and durability.

Phase Protection

Three-phase 400/460 VAC powered units are protected from phase mis-wiring.

Pluggable power connection

Easily made without opening the chassis.

Easy Access Control Panel

Electrical controls are easily accessible with the flip down access panel.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Extra Protection from Water

The rain hood is a standard feature for NEMA 3R, 4, and 4X units. This hood provides protection from falling water and direct water sprays.

Lifting Lug Ports

Threaded holes accommodate the installation of lifting lugs to facilitate safe installation.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Ultra Efficient Design

Our micro-channel design provides greater efficiency. With up to 40% increased heat rejection vs. standard condensers, improving the transfer of heat from the refrigerant into the ambient air.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

Note: Cooling capacity may vary between voltage and configurations.

DTS 36X1 | COOLING UNITS

20000 - 24000 Btu/h

The DTS 36X1 series cooling units have the largest capacity at almost 2 Tons. These units are ideally suited for high temperature, high ambient environments. Available in 3 models; **DTS 3641 (NEMA Type 12)** for indoor use, **DTS 3661 (NEMA Type 3R/4)** designed for outdoor use, and the stainless steel **DTS 3681 (NEMA Type 4/4x)** designed for washdown applications.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

High Cooling Capacity

The largest capacity cooling unit for high heat load requirements. High cfm fan on evaporator side for generous air movement through the enclosure.

High Ambient Performance

The DTS 3000 Series Cooling Units were designed utilizing high temperature compressors and larger condensers. Both the indoor NEMA Type 12 units and outdoor units perform very well in environments that require cooling where the maximum ambient temperature is 131° F.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Corrosion Protection

Outdoor and washdown units have a special coating on pipes and coils on the ambient side of the unit to provide maximum protection from saltwater, sour gas, and other corrosive substances.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

Lifting Lug Ports

Threaded holes accommodate the installation of lifting lugs to facilitate safe installation.

Self Protected from Harsh Environments

Our unit is uniquely designed to protect itself in NEMA 3R, 4, and 4X environments. An example of this is the location of our control electronics within our dry, cool interior circuit.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature. This increases the operating life of the compressor by preventing thermal overload trips.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Maintenance Free, Filterless Design

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannerberg proudly utilizes components which adhere to these requirements.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

εCOOL COOLING UNITS

OEMs know: Looking towards the future, engineering processes will demand new and better uses of technology. Optimization is needed – with solutions that combine maximum performance, environmental friendliness and maximum cost efficiency. Our εCOOL technology sets this new standard.

εCOOL is the most efficient solution.

Raising productivity, reducing CO₂ emissions and cutting costs – Pfannenberg is aware of the challenges companies are facing today. We offer a solution: εCOOL technology. Developed with the aim of maximum cost efficiency coupled with maximum performance, εCOOL technology represents a new standard for cost and energy savings in the thermal management of electrical enclosures. The result: **it enables annual savings of over 35 % in energy costs alone.**

Produced out of rugged sheet metal, Pfannenberg's cooling units are extremely resilient and long-lasting in test industrial operating conditions. Depending on requirements, they are available for traditional mounting on the door or side, for partially recessed door or side mounting and the space-saving top-mounted position. Colors can easily be integrated as well because the covers can be painted or powder coated to suit the particular industrial design.

The εCOOL series also set records in terms of ease of assembly and maintenance – which leads to more cost benefits.

Easy Handling: Service-friendly design reduces routine costs.

Thought-out solutions for installation and service: Pfannenberg's εCOOL series takes excellent accessibility and simple maintenance into consideration.

- Large condenser fin spacing allow for longer maintenance periods, even without an additional Nano coating.
- One mounting cut-out for 5 different performances, 1,000–4,000 W.
- Mounting possible by 1 person in a few minutes.
- Simple accessibility to all the relevant components.
- Fast component replacement.
- Integration in established network possible.
- Versatile voltage supply of 380–460 V via built-in transformer.
- Integrated condensate evaporation system.

Large fin spacing

Simple installation

Condensate evaporate system

Time-saving.

Tool-free patented mounting design allows for quick and efficient assembly that considerably reduces installation costs.

Simple installation.

Pfannenber offers cooling units with the world's largest possible cut-out compatibility providing unit replacement with the least possible installation work. Intelligent mounting systems minimize work during unit installation and replacement.

Advantages of the **ECOOL** Cooling Unit Series.

New Filter Adapter:

- Optional adapter for multiple use and all filter inserts.
- Optional filter inserts (aluminum, fleece or fluted filter inserts) depending on the environmental conditions/application.
- Patented fluted filter mats extend the service intervals by 300%.
- Tool-less installation and tool-less filter replacement.
- Filter replacement in less than one minute.
- Filter adapter available in several colors.

Controlled Energy Efficiency:

- Pfannenber "Multi Controller" (MC) has now been upgraded with the energy savings mode (ESM) as a standard feature (DTI/DTS 6000 series).
- Internal fan switches off when no temperature increase is registered; condensate evaporator will then be deactivated.
- Cooling mode starts automatically upon exceeding the required cabinet temperature.
- Additional temperature probe for precise measurement of the internal cabinet temperature and to ensure correct operation of the energy savings mode.
- No intermediate start-up of the internal fan necessary for temperature monitoring of the cabinet.
- Fan's length of life is significantly longer.

DTI 6000 C | RECESSED COOLING UNITS

3000 - 6000 Btu/h

NEW

The New DTI 6000C series compact cooling units are easily serviceable and easy to install. These units also feature the best energy efficiency on the market when compared against similar product. These cooling units are ideal for mounting on a cabinet door and are partially recessed for space restricted installations.

Partially Recessed

For space restricted installations, ideal for door mount.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Efficient Circulation

Large distance between intake and exhaust vents for efficient air circulation and elimination of hot spots.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Energy Efficient Hibernation Mode

When cooling isn't necessary due to equipment shutdown or cold weather conditions, the unit conserves energy by turning fans off - except for periodic cycling for circulating air within the enclosure.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

Phase Protection

Three-phase 400/460 VAC powered units are protected from phase mis-wiring.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements for up to 43% energy savings and operating costs reduction.

Maintenance Free, Filterless Design

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

External Display

For visual temperature monitoring.

Easy Installation and Maintenance

Tool-free spring plate design keeps the unit safely in place and allows mounting by 1 person in less than 3 minutes with 55% lower mounting costs. Direct access to the PCB and the fans means 80% shorter repair times.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets.

To conserve power, this heater only activates when necessary.

Cooling Capacity Performance Curves

How to use these charts

Example: @ 95 °F (ambient, X-axis),
@ 95 °F (internal, diagonal lines)
DTI 6401 = 6820 Btu/h cooling capacity (Y-axis)
DTI 6501 = 8550 Btu/h cooling capacity (Y-axis)

DTI 6801 | RECESSED COOLING UNITS

13000 - 16000 Btu/h

The DTI 6801 series cooling units offer the greatest cooling capacity of our DTI Series Recessed Cooling Units. These cooling units also utilize a long internal air path to capture heat above the components and provide cool air below. These units are ideal for mounting on a cabinet door and are partially recessed for space restricted installations.

Partially Recessed

For space restricted installations, ideal for door mount.

Easy Installation and Maintenance

Tool-free spring plate design keeps the unit safely in place and allows mounting by 1 person in less than 3 minutes with 55% lower mounting costs. Direct access to the PCB and the fans means 80% shorter repair times.

Thermal Overload Protection

Compressor and fan motors are outfitted with integral temperature switches to shut down the unit in the event of excessive temperature.

Pressure Overload Protection

High pressure cutout switch ensures safety by shutting off the compressor in the event of excessive pressure appearing in the refrigeration circuit.

Closed Loop Design

Designed to isolate the external ambient air from the internally conditioned air eliminating the risk of contaminants entering the cabinet.

Thermal Expansion Valve

Regulates the flow of refrigerant based on thermal demand for efficient performance over the entire operating temperature range.

Efficient Circulation

Large distance between intake and exhaust vents for efficient air circulation and elimination of hot spots.

Environmentally Friendly

Utilizes HFC-free R134a refrigerant versus a blended refrigerant for easier service and minimized negative impact to the environment.

Energy Efficient Hibernation Mode

When cooling isn't necessary due to equipment shutdown or cold weather conditions, the unit conserves energy by turning fans off - except for periodic cycling for circulating air within the enclosure.

Phase Protection

Three-phase 400/460 VAC powered units are protected from phase mis-wiring.

ERP Efficiency Certified

As a component of the Kyoto Protocol to reduce carbon monoxide emissions, the European Energy Related Products (ERP) Directive includes an efficiency rating for fans. Pfannenberg proudly utilizes components which adhere to these requirements for up to 43% energy savings and operating costs reduction.

Maintenance Free, Filterless Design

The wide fin spacing is less susceptible to clogging from dirt buildup which can cause the unit to work harder and hamper efficiency.

External Display

For visual temperature monitoring.

High Airflow Backward Curve Impeller Fan

Provides high airflow in a long lasting, single bearing design. Outperforms typical two-bearing blowers with nearly twice the lifespan.

Hermetically Sealed Compressor

The absence of any refrigerant fill valves eliminates leak paths. Recharging is never needed. 100% cooling capacity efficiency is ensured.

Active Condensate Management

Condensation is a natural by-product of refrigeration. The heated condensate collection pan boils this off thereby eliminating the need for drain tubes and buckets. To conserve power, this heater only activates when necessary.

THE DTT & COOL SERIES COOLING UNITS

For Top Mounted Applications

Pfannenberg's DTT Series top mounted cooling units are 100% condensate safe. These units are ideal for space-saving installation on the top of the control cabinet. One of the main features of the DTT's innovative condensate management design is the repositioning of the cooling circuits. Moving the cold area up prevents condensation from forming in the cabinet where the cooling unit meets the enclosure. A widened airflow in the evaporator stops the formation of condensate buildup. Finally return air channels are engineered to increase the speed of the air leaving the cooling unit, ensuring cool air is effectively distributed moisture-free within the enclosure.

Advantages of DTT Cooling Units:

- Space-saving installation on top of the control cabinet:
 - Keep emergency exit routes and logistic paths clear.
 - Free up space on the production floor.
- Protected placement above the production floor. Unit is out of reach from fork lift trucks and other vehicles.
- DTT cooling units fit on all manufacturers' cabinets.
- 100 % protection against condensate due to patented seamless molded condensate tray.

DTT – Guaranteed 4-fold condensate protection:

1. Repositioned cooling circuit prevents "cold bridge" formation on the ceiling of the electrical enclosure.
2. One piece leak-proof molded tub.
3. Managed water droplet control.
4. Eliminate the need for duct work inside the cabinet.

Cold Bridge

The challenge:

The lower, cold area of the cooling unit has direct contact with the ceiling of the warm electrical enclosure. As a result of this "cold bridge" effect, condensate can form on the inside ceiling of the electrical enclosure and drip into the inside.

The Pfannenberg solution:

The position of the air-conditioning circuits was changed. When the cold area of the cooling unit is at the top and the warm area is at the bottom, a "cold bridge" cannot form on the inside ceiling eliminating the risk of condensate dripping inside the electrical enclosure.

Overflow of Condensate

The challenge:

The horizontal condensate discharge which runs along the unit's floor makes the condensate drainage more difficult. Part of the condensate water that has accumulated in the cooling unit can overflow into the electrical enclosure via the air outlet opening.

The Pfannenberger solution:

Vertical drainage of the condensate. The positioning of the evaporator in the top part of the cooling unit allows for problem-free drainage of the condensate water without contact to the electrical enclosure.

Condensate Build-up

The challenge:

Concentrated warm air hits the evaporator. Parts of the condensate water formed there can be carried away by the airflow and can get into the electrical enclosure with the cold air.

The Pfannenberger solution:

The warm air is spread out over a large evaporator. The reduced air speed at the evaporator reduces the risk of water being carried through the air, guaranteeing a condensate-free airflow in the direction of the electrical enclosure.

Air Hoses

The challenge:

The hoses conducting the cold air are surrounded by warm air from the electrical enclosure. As a result, condensate can form on the surface of the hose.

The Pfannenberger solution:

Integrated nozzles instead of air hoses. Air outlet nozzles are positioned on both sides of the cooling unit which accelerate the cold air and conduct it condensate-free down to the bottom of the electrical enclosure.

DTT 6101- 6201 | COOLING UNITS

1200 - 4000 Btu/h

The DTT 6101 - 6201 cooling units use our 100% patented condensate safety design and new micro-channel condensers for greater efficiency. These cooling units are designed to be placed on top of the enclosure when there is a space shortage or aisles need to be kept clear.

Zero Sweat Guarantee

Condensate will not form in the cabinet where the cooling unit meets the enclosure.

Managed Water Droplet Control

As the airflow passes through the evaporator, any condensate generated on the evaporator will not be carried into the enclosure.

Eliminate the need for Duct Work

Return air channels are engineered to increase the speed of the air leaving the cooling unit, ensuring cool air is effectively distributed moisture-free within the enclosure.

One Piece Leak-Proof Molded Tub

Industry's only seamless molded condensate tray located at the top of the unit eliminates the ability for water to drip into the cabinet.

23.43 in. (595 mm)

Active Condensate Management

Condensate evaporator uses heat to eliminate condensate even when the system is not actively cooling.

Energy Efficient

Our optional multi controller connected to a sensor, automatically turns off the fan when it is not needed.

17.13 in. (435 mm)

15.55 in. (395 mm)

Durable and Reliable Components

High quality compressor, fans and heat exchangers provide dependable cooling of electrical enclosure components. The micro-channel design provides a condenser coil that is harder to damage. Fin combing is not necessary to maintain proper airflow channels.

Ultra Efficient Design

Our micro-channel design provides greater efficiency. With up to 40% increased heat rejection vs. standard heat exchangers, improving the transfer of heat from the refrigerant into the ambient air.

Fast and Easy Maintenance

Removable cover allows for easy access to the front facing control components. In addition the micro-channel condenser design allows for an air path that clogs less and is significantly easier to clean during general maintenance.

Reduced Maintenance Costs

Have a dirty environment? Use our optional tool-free quick release filter mat mounting frame and a standard Pfannenberg filter to extend the life of the unit and reduce maintenance costs.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

SPARE PART KITS

Original Parts - Only from Pfannenberg

In the event of a cooling unit failure, original Pfannenberg spare parts are always in stock. Specific spare part kits are also available for each DTS range of Cooling Units to ensure the best reliability of your unit. By using our original spare parts, downtime is reduced to a minimum or longer downtimes are prevented. [Individual spare parts are also available, please consult factory for details.](#)

Why choose Pfannenberg's original parts:

Developed with each device, our parts are a perfect fit every time. They automatically benefit from every factory product improvement and upgrade, as well as from over 50 years of thermal management experience.

A long service life and a fair price make our original parts particularly economical.

Only with original parts from Pfannenberg can you be sure that ...

- They are the right parts.
- They fit.
- They are in stock.
- They can be delivered quickly.
- You don't lose any valuable time.
- The proper functionality is guaranteed.
- The guarantee for your whole unit remains intact.

We have bundled the most frequently requested spare parts and wearing parts into two kits: an electronics kit and a refrigeration kit. We ensure quick and global delivery with these, and help you to keep possible downtime to a minimum.

PWS 3000 Series Air / Water Heat Exchangers

Efficient Cooling when Ambient Conditions are at their Worst

The use of Pfannenber Air/Water Heat Exchangers is particularly suitable where ambient temperatures are high or the atmosphere proves to be particularly oily or aggressive.

Ideal areas of use for air/water heat exchangers are wherever machines or production processes are cooled by tempered water and water is thus already provided.

With cooling capacities ranging from 2,218 BTU (650 W) to 34,121 BTU (10,000 W) these units are specifically engineered to allow safe, efficient use of liquid coolant to cool enclosure electronics.

Additionally our sloped horizontal cover surfaces and optional NEMA Type 4X stainless steel type rating make the PWS 3000 series perfect for wash-down applications.

THE TECHNOLOGY OF COOLING

Cooling with Closed Loop Air to Water Heat Exchangers

Pfannenberg Air to Water Heat Exchangers use a supplied water source to remove the heat from the electrical cabinet. The heat from the enclosure is transferred to fluid and the heated fluid is then piped away adding no heat to the ambient environment. Because there is no heat transfer to the ambient environment, there is no need to de-rate the unit's performance in high ambient conditions.

How do I know if a Air to Water Heat Exchanger is the right product for my application?

- If there is a chilled water supply readily available at the enclosure.
- If the environment has extreme conditions like extremely high ambients, extremely dirty or caustic, that make other systems not applicable.

Properly sizing a Air to Water Heat Exchanger

To properly size an Air to Water Heat Exchanger you must know the **required cooling capacity in Watts, available water temperature and the dimensions of the unit and enclosure.**

$$\{P_C = P_D - P_R\} \quad \{P_R = C \times A \times \Delta T\}$$

- **P_C [Watt]:**
Refrigeration capacity of a cooling unit.
- **P_D [Watt]:**
Dissipation loss: Thermal power generated inside a cabinet by the dissipation loss of components.
- **P_R [Watt]:**
Radiant heat gain/loss: Heat transfer through the skin of the enclosure (insulation factor not included).
- **C [W/m²°C]:**
Coefficient of heat transmission.
- **A [m²]:**
Surface area of electronics cabinet.
- **ΔT [°C]:**
Difference in temperature between the ambient air and the air inside the electronics cabinet.

Utilizing performance curves to properly size cooling units: Pfannenberg utilizes the DIN standard 35/35 °C when rating our cooling units. Many other companies use 50/50 °C, which provides a higher, non-usable value. Customers should use their own application temperatures to determine the proper cooling capacity of the system.

Important information when utilizing Air to Water Heat Exchangers:

- The performance of an Air to water Heat Exchanger is directly related to the difference in the water temperature and the air temperature inside the enclosure.
- To manage condensation, an external condensation evaporator (KVDTX) can be used.
- The enclosure should be sealed to prevent the inflow of ambient air.
- Use the door contact switch to impede operation with open doors and consequent excessive accumulation of condensation.
- Make sure unit is level.
- Setting the temperature to the lowest setting is not the optimal solution due to the condensation issues. The value we have preset on the cooling unit is a sound compromise between cooling the inside of the enclosure and the accumulation of condensation.

AIR/WATER HEAT EXCHANGERS QUICK SELECTION CHART

Type	Cooling capacity Btu/h / W*	Rated voltage	Dimensions W x H x D Inches (mm)	Approvals			Page
				UL	cUL	CE	
PWS 3062	2218 / 650	115 V / 230 V	10.13 (257) x 24.14 (613) x 5.62 (142.8)	●	●	●	80

PWS 7332	10748 / 3150	115 V / 230 V	15.75 (400) x 37.40 (950) x 7.48 (190)	●	●	●	94

AIR / WATER HEAT EXCHANGERS

The PWS 3000 Advantage Series has been engineered to provide enhanced performance features:

- Mounting templates that are compatible with those of the DTS 3000 cooling units provides interchangeability allowing the best Pfannenberg solution to be used for any application.
- Isolation of the water circuit components and enhanced air baffling provide the best protection of the control enclosure from water carry-over.
- An electronic thermostat with digital LED display allows easy performance verification and temperature programming.
- Free-draining heat exchanger coil design, plus manual operation of the water solenoid valve allows easy winterization for seasonal, outdoor applications.
- Sloped horizontal cover surfaces and optional NEMA Type 4X SS type rating make the PWS 3000 Advantage Series perfect for wash-down applications.

PWS 30X2 | AIR/WATER HEAT EXCHANGERS

2218 - 2900 Btu/h

The PWS 30X2 Advantage Series Air/Water Heat Exchangers is our smallest air/water heat exchanger. These units are ideal for harsh ambient conditions, requiring a cool liquid source and power. Available with either powder coated or stainless steel covers and 2 different capacities. [Need a cool liquid source?](#) Pair this unit with one of our packaged chillers.

Washdown Roof Design

Metal covers are designed with a sloped top which sheds water away from the electrical enclosure as well as eliminates potential water pooling, corrosion and ice buildup.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Long Airflow Path

Heat exchangers are designed to draw hot air from the top of the enclosure and deliver cool air below the components.

Closed Loop Design

Designed to isolate the external ambient air from the internal air circuit eliminating the risk of contaminants entering the cabinet.

24.14 in. (513 mm)

10.13 in. (257 mm)

5.62 in. (142.8 mm)

Push to Connect Fittings

Hydronic connectors that supports quick connection to 1/2 inch O.D. hose or 1/2 inch I.D. hose with included adapter. Unlike other units that have rigid permanent connections.

Optimized Internal Design

Smart engineered solution, easy to service and maintain.

Intelligent Control of Water Flow

The adjustable electronic thermostat permits precise control of the electrical enclosure temperature by regulating the coolant flow which is activated by a solenoid valve. This regulates the coolant flow to minimize coolant waste and increase energy-efficiency.

Condensation Management

Physical barriers allow for condensation to be collected and drained from the system with zero intrusion into the cabinet.

Cooling Capacity Performance Curve

PWS 31002 | AIR/WATER HEAT EXCHANGERS

34121 Btu/h

The PWS 31002 Advantage Series Air/Water Heat Exchangers are our largest units offering over 34000 Btu/h cooling capacity and are ideal for harsh ambient conditions. Requiring only a cool liquid source and power. Available with either powder coated or stainless steel covers. [Need a cool liquid source?](#) Pair this unit with one of our packaged chillers.

Washdown Roof Design

Metal covers are designed with a sloped top which sheds water away from the electrical enclosure as well as eliminates potential water pooling, corrosion and ice buildup.

Optimized Internal Design

Smart engineered solution, easy to service and maintain.

Rugged Design

Powder coated steel or stainless steel cover designed for manufacturing environments. Easily painted to match enclosure or machine.

Long Airflow Path

Heat exchangers are designed to draw hot air from the top of the enclosure and deliver cool air below the components.

Closed Loop Design

Designed to isolate the external ambient air from the internal air circuit eliminating the risk of contaminants entering the cabinet.

12.10 in. (307 mm)

65.52 in. (1664 mm)

19.75 in. (501 mm)

Push to Connect Fittings

Hydronic connectors that supports quick connection to 1/2 inch O.D. hose or 1/2 inch I.D. hose with included adapter. Unlike other units that have rigid permanent connections.

Lifting Handles

Handles are mounted on the cover for easy handling and installation.

Intelligent Control of Water Flow

The adjustable electronic thermostat permits precise control of the electrical enclosure temperature by regulating the coolant flow which is activated by a solenoid valve. This regulates the coolant flow to minimize coolant waste and increase energy-efficiency.

Condensation Management

Physical barriers allow for condensation to be collected and drained from the system with zero intrusion into the cabinet.

THE BEST LIQUID-COOLED SOLUTION: Combined Chillers and PWS Air/Water Heat Exchangers

Combining Pfannenber Chillers and PWS Air/Water heat exchangers is the best solution for recirculating water cooling systems for control enclosures when a liquid cooling source is not available on site. Dedicated to harsh environments, this solution is the perfect match to save energy, reduce maintenance and prevent downtime.

Pfannenber Water-Cooled Solutions.

Our water-cooled solutions are designed with durable components to ensure the effectiveness and longevity of the critical cooling process at hand. Our chillers, in combination with our air/water heat exchangers, offer decisive advantages:

- In applications where power losses must not enter the surrounding space.
- If aggressive ambient air restricts the use of conventional cooling units.
- If a very high IP system is required (up to IP 65).
- If maintenance-free cooling units are necessary.

Water-cooled solutions provide the most efficient enclosure cooling when ambient conditions are at their worst.

The Advantages of Closed-Loop Liquid Cooling

With Manufacturing space at a premium, machine packages have become smaller and liquid cooling has emerged as the most efficient and economical means of removing process heat.

Liquid cooling is especially well adapted to hot, dirty environments, where it provides a method of removing the heat from the machine and not contributing additional heat back into the environment.

CC and EB Series Packaged Chillers

Closing the Loop for Industrial Fluid Cooling Applications

Pfannenberg offers a versatile range of packaged chillers, ranging in sizes from less than ½ Ton to 30 Tons insuring the proper capacity available for most applications. These packaged chillers are ready to use requiring only piping and power to install as part of your solution for process cooling applications - we'll even provide the coolant. Ethylene & Propylene Glycol coolants, with proper corrosion inhibitors are available in a variety of packaging options – both full strength and pre-mixed.

Each chiller model includes the pump, tank, refrigeration system and controls required for simple installation and reliable, efficient operation.

Our knowledgeable applications staff is always on hand to discuss the application and to make sure that a proper selection is made. **With our many available equipment options we can easily customize our standard chillers to meet specific application requirements.**

These chillers are a perfect match for Pfannenberg Series PWS Air/Water Heat Exchangers when a local source of cooling is not available.

PRODUCT EXPERTISE

Service Friendliness

We are committed to minimum MTTR (Mean Time To Repair) and the shortest time needed to replace units. Our service-friendly accessibility, standardized parts and a carefully thought out plug-and-play concept minimizing your repair costs and downtime make this possible.

Energy Efficiency

Our chillers achieve top grades in energy consumption. They can be centralized, using a single chiller that serves multiple cooling needs, or decentralized where each application or machine has its own chiller. Each approach has its advantages. It is also possible to have a combination of both centralized and decentralized chillers, especially if the cooling requirements are the same for some applications or points of use.

Reliability

Our customers demand performance that offers dependability and reliability they can count on. We are committed to the highest level of design and manufacturing accuracy to make sure your chiller performs as expected. More than 20 years of experience in the field of re-cooling and the use of high-quality components ensure optimum long-term stability and top MTBF (Mean Time Between Failures).

Design

Whether our products are cooling oil or water, Pfannenber has well-developed global expertise in the design and manufacture of packaged refrigeration products for industrial environments. Pfannenber's process chillers optimize three basic areas to perform as one: the refrigeration circuit, the hydraulic circuit and controls.

CHILLERS

Refrigeration System

Since the natural tendency of heat is to move from a higher temperature medium to one with a lower temperature, the chiller's mechanical refrigeration system is needed to maintain cool fluid temperatures. This assures a constant cooling circuit. Pfannenber's engineers carefully select the components of this system to maximize performance, efficiency & serviceability. Industrial compressors & fans, extended surface evaporators & condensers, along with the right refrigerant for the application, are seamlessly integrated to achieve the optimum result.

Hydraulic System

Circulating and storing the chilled fluid is the function of the hydraulic circuit. Our standard chillers include high-quality hydraulic components that are selected to support a wide range of applications. Pumps provide flexibility in terms of both flow rate and pressure capabilities. The use of non-ferrous materials for wetted parts promotes longer pump life, avoiding premature failure.

Control System

Simple & effective controls allow the mechanical components to work together to meet various operating requirements. Digital controllers are connected to sensors that measure temperature, and switches that confirm pressure, flow and level. This provides the continuous logical instructions needed to deliver reliable liquid cooling & circulation. **Options are also available to provide remote monitoring and/or control.**

Whatever the application

Heat is a single common by-product of today's manufacturing machines that include the advanced automation technology required for both high speed operation and high precision. Components such as spindle motors, variable frequency drives, laser and x-ray sources all require cooling to operate properly and reliably – most often in very adverse manufacturing environments.

With manufacturing space at a premium, machine packages have become smaller and liquid cooling has emerged as the most efficient and economical means of removing process heat. Liquid cooling is especially well adapted to hot, dirty environments, where it provides a method of removing the heat from the machine and not contributing additional heat back into the environment.

...the perfect solution

Pfannenberg's extensive background providing cooling for a wide variety of machines including machining centers, printing presses, wood working machines, welding systems, packaging machines and food processing machines to name a few, allows us to apply proven cooling technology to new applications.

Our application engineering team works to match our standard products with as many applications as possible and also works closely with our product engineers to offer custom solutions when required. This continuous interaction allows continuous product development that is always in keeping with the needs of the market.

Why Choose a Packaged Chiller System?

Pfannenberg's packaged chillers are versatile and ideal for applications that have cooling requirements from less than a half a ton up to 30 tons. All chillers are shipped as factory packaged systems requiring only field power and piping to provide recirculated chilled coolant to virtually any process. **Pfannenberg's new compact CC Chillers are ideal for quick setup and trouble free operation.**

CC & EB Series Packaged Air Cooled Chillers

Packaged and ready to use, Pfannenberg chillers require only piping & power to install a solution for process cooling applications – we'll even provide the coolant.

- Each chiller model includes the pump, tank, refrigeration system and controls required for simple installation and reliable, efficient operation.
- Model sizes ranging from a ½ Ton up to 30 Tons insure that the proper capacity is available for most applications.
- Ethylene & propylene glycol coolants with proper corrosion inhibitors are available in a variety of packaging options – both full strength and pre-mixed.
- Equipment options are available to easily customize standard chillers to meet specific application requirements.
- Our knowledgeable applications staff is always on hand to discuss the application and to make sure that a proper selection is made.
- These chillers are a perfect match for Pfannenberg Series PWS Air/Water Heat Exchangers when a local source of cooling is not available.

PWW Water to Water Heat Exchangers

When available water is too cold or contaminated to be directly circulated to certain devices or vessels, Pfannenberg's PWW Heat Exchangers are the best solution to deliver clean coolant at optimum temperatures for critical needs.

- Durable components to ensure the effectiveness and longevity of the critical cooling process at hand.
- Each unit offers two isolated water circuits - one on the supply side, and one on the process side.
- Coolant reservoir and circulating pump included in the process side.
- Electronically actuated ball valve included in the supply side or modulating source water flow rate in order to maintain the desired process and/or equipment temperature.

Selecting the correct Pfannenberg Chiller

Use the chart below to help you select the proper chiller for your application. For questions please consult with the factory or visit our website for the latest charts, diagrams, drawings and sizing materials.

Application Example

DID YOU KNOW?

In addition to water and Glycol coolants, Pfannenberg chillers can also be used to chill oil for various applications such as cutting machines, drill presses and hydraulic circuits.

Contact Pfannenberg today to discuss the requirements of your specific project.

CC 6101- 6601 | CHILLERS

1200 - 6800 W / 4056 - 23100 Btu/h /
0.3 - 1.9 TONS

The CC 6101 - 6601 Series packaged chillers include a variety of frame sizes and capacities to fulfill a wide range of applications.

High Airflow for Efficient Operation

Axial fans deliver high volume airflow across the condenser for effective dissipation of waste heat while fan cycling provides maximum refrigeration efficiency and energy conservation.

Designed to Handle Tough Environments

Large, finned-tube condensers provide a high level of energy efficiency and fouling resistance.

Larger Surface Area Brazed-plate Evaporators for Lower Energy Usage

With large heat transfer surfaces in a compact size, brazed-plate evaporators offer efficient operation for both heat transfer and coolant flow, resulting in reduced pumping energy. For optimum performance, externally equalized thermal expansion valves are utilized to continuously manage refrigerant flow based on load.

Long Service Life & Wider Range of Performance

Centrifugal coolant pumps offer a wide range of flow and pressure capabilities to fulfill a variety of pipe-run requirements. Non ferrous construction eliminates corrosion and problems surrounding coolant contamination.

Large Coolant Capacity to Absorb Rapid Changes in Heat Load

Vented polypropylene reservoir tanks effectively accommodate rapid changes in heat load thereby permitting the system to cycle efficiently.

High Efficiency, Long Life Compressors

Heavy-duty reciprocating compressors provide high efficiency and long service life.

Durable, Weatherproof Construction

Galvanized steel frame and panels are polyester powder coated in light grey (RAL 7035) to resist corrosion.

Continuous Display Info & Remote Operation

The feature-rich, plug in controller with digital display provides ease of setup and monitoring of all operating conditions including warning and alarm indications. Remote start/stop capability and general alarm contacts are provided. An optional wired remote control pad with 400 ft. range is available.

Protected Electronics and Controls Support Safe & Efficient Operation

Electrical controls for safe and efficient operation include high, low and fan control refrigerant pressure switches, coolant flow and freeze protection. All sensitive devices are contained within a NEMA 4 rated enclosure and built to UL508a standards.

Flexible Mounting

Channel bases are included to facilitate lift truck handling and permanent foundation mounting. Optional casters are available.

*Note: The size listed on this page is for the CC 6101 - 6301 Models. Please see the chart on the opposite page for dimensions of our CC 6401 - 6601 Models.

Continuous Display Info & Remote Operation

The feature-rich, plug in controller with digital display provides ease of setup and monitoring of all operating conditions including warning and alarm indications. Remote start/stop capability and general alarm contacts are provided. An optional wired remote control pad with 400 ft. range is available.

Protected Electronics and Controls Support Safe & Efficient Operation

Electrical controls for safe and efficient operation include high, low and fan control refrigerant pressure switches, coolant flow and freeze protection. All sensitive devices are contained within a NEMA 4 rated enclosure and built to UL508a standards.

Flexible Mounting

Channel bases are included to facilitate lift truck handling and permanent foundation mounting. Optional casters are available.

*Note: The size listed on this page is for the EB 30 WT & EB 60 WT Models. Please see the chart on the opposite page for dimensions of our EB 90 - EB 220 WT Models.

7.9 - 31.1 TONS

The EB 250-900 WT Series packaged chillers include a variety of frame sizes and capacities to fulfill a wide range of applications. The unique, vertical design allows warm air from the condenser to be discharged conveniently upward.

High Airflow for Efficient Operation

Axial fans deliver high volume airflow across the condenser for effective dissipation of waste heat while fan cycling provides maximum refrigeration efficiency and energy conservation.

High Efficiency, Long Life Compressors

Heavy-duty reciprocating or scroll type compressors provide high efficiency and long service life. Crankcase heaters are included with all models.

Designed to Handle Tough Environments

Large, finned-tube condensers provide a high level of energy efficiency and fouling resistance.

Large Surface Area Brazed-plate Evaporators for Low Energy Usage

With large heat transfer surfaces in a compact size, brazed-plate evaporators offer efficient operation for both heat transfer and coolant flow, resulting in reduced pumping energy. For optimum performance, externally equalized thermal expansion valves are utilized to continuously manage refrigerant flow based on load. (not pictured)

Flexible Mounting

Channel bases are included to facilitate lift truck handling and permanent foundation mounting. Optional casters are available.

Durable, Weatherproof Construction

Galvanized steel frame and panels are polyester powder coated in light grey (RAL 7035) to resist corrosion.

Long Service Life & Wider Range of Performance

Centrifugal coolant pumps offer a wide range of flow and pressure capabilities to fulfill a variety of pipe-run requirements. Stainless steel construction eliminates corrosion and problems surrounding coolant contamination.

Continuous Display Info & Remote Operation

The feature-rich, plug in controller with digital display provides ease of setup and monitoring of all operating conditions including warning and alarm indications. Remote start/stop capability and general alarm contacts are provided. An optional wired remote control pad with 400 ft. range is available.

Protected Electronics and Controls Support Safe & Efficient Operation

PWW 3242-3482 | WATER/WATER HEAT EXCHANGERS

24000 - 48000 W / 81960 - 163920 Btu/h /
6.8 - 13.7 TONS

PWW Series Water/Water Heat Exchangers are ideal for utilizing a contaminated water source, such as river water or low quality tower water without compromising the critical liquid cooled components. Two separate circuits allow the heat to be transferred from the "dirty" side to the clean side protecting electronic components such as liquid cool drives.

Operating Status Indication

Pfannenberg Series BR 50
Stacklights are included with all models to indicate operating conditions at a glance.

Durable, Weatherproof Construction

Galvanized steel frame and panels are polyester powder coated in light grey (RAL 7035) to resist corrosion.

Long Service Life & Wider Range of Performance

Centrifugal coolant pumps offer a wide range of flow and pressure capabilities to fulfill a variety of pipe-run requirements. Stainless steel construction eliminates corrosion and problems surrounding coolant contamination.

Large Coolant Capacity to Absorb Rapid Changes in Heat Load

Insulated vented polypropylene reservoir tanks effectively accommodate rapid changes in heat load.

Continuous Display Info & Remote Operation

The feature-rich, plug in controller with digital display provides ease of setup and monitoring of all operating conditions including warning and alarm indications. Remote start/stop capability and general alarm contacts are provided. An optional wired remote control pad with 400 ft. range is available.

Protected Electronics and Controls Support Safe & Efficient Operation

Electrical controls for safe and efficient operation include coolant flow and level monitoring. All electrical components are contained within a NEMA 4 rated enclosure and built to UL508a standards.

Flexible Mounting

Channel bases are included to facilitate lift truck handling and permanent foundation mounting. Optional casters are available.

Heaters, Thermostats and Hygrostats

Additional Protection for Your Electronics

The formation of condensation is one of the biggest dangers for electrical enclosures. As long as they are working under load, their own warmth prevents water from condensing. If the process is switched off, the electronics cool down. This is where our control cabinet heaters (radiant heaters and fan heaters) provide additional protection for your electronics.

We offer a wide variety of performance class control cabinet heaters which are complemented by thermostats and hygrostats. Combined as a solution, they ensure that the temperature inside the control cabinet is always correct and that the formation of condensation is prevented.

The control of Filterfans® by the FLZ 530 Thermostat represents an intelligent solution for control of the fan, preventing excessive energy usage and reducing the maintenance cost associated with the frequency of replacing filters.

Additionally using a thermostat or hygrostat results in greater reliability of your production process:

- Pinpoint distribution and constant temperature in the control cabinet.
- Reduced energy consumption and optimization of the efficiency of the heaters.
- Additional savings on energy, materials and time.

Pfannenberg's heaters, thermostats and hygrostats expand Pfannenberg's protection to additional outdoor applications such as ATMs, Kiosks, Ticket Machines etc.

THERMAL MANAGEMENT OF ENCLOSURES

Monitoring Temperature, Heating & Controlling Condensate

Pfannenberg's Heaters, Thermostats and Hygrostats detect and keep ambient conditions above dew point to avoid the harmful effects of condensation on your electronics. They can be used as a standalone product or in partnership with our Filterfan® and Cooling Unit product lines.

FLH Heaters

This type of heating is ideal for use in larger electrical enclosures. They have an integrated fan that assists the natural convection and provides fast and even distribution of the heat in the electrical enclosure.

The fan heaters are used in combination with a thermostat or hygrostat, for the avoidance of excessively low temperatures or excessively high humidity in the electrical enclosure and also help to avoid the formation of corrosion.

PFH-T Fan Heaters with Thermostat

The PFH-T fan heater with thermostat is designed to protect electronics from the effects of low temperatures such as corrosion, freezing or condensation, which can damage critical components within a control enclosure.

FLZ Thermostats

Thermostats are used as temperature controllers and, therefore, for the control of Filterfans® or electrical enclosure heaters. They are available with N.C. (normally closed) / N.O. (normally open) and changeover contacts. In combination with control cabinet heaters you can ensure, besides temperature control, that the control cabinet is 'artificially' dehumidified, in particular in outdoor applications. That means that the temperature is kept above the dew point so that no water condenses out of the air, which could lead to short circuits due to the formation of condensation.

Hygrostats

Hygrostats switch on electrical enclosure heaters or Filterfans® when a preset relative humidity is exceeded. The relative humidity is kept above the dew point and the condensation of water on electrical components and the corrosion of unprotected sheet metal is prevented. A new electronic combination device unites thermostat and hygrostat in one housing.

PFH-T | COMPACT FAN HEATER WITH THERMOSTAT

200 W - 1200 W

NEW

UL US CE

The **PFH-T Series Compact Fan Heaters with thermostat** feature our **new touch safe design**. Ideal for maintaining precise temperatures required for the proper function of electronics, while also protecting equipment from damaging condensation caused by changes in temperature or humidity. **Available in 6 models.**

Flexible Mounting Options
Unit can be direct mounted or connected to a standard DIN rail **without tools** using the included snap fastener.

Touch-Safe Outer Housing
Well insulated ABS high-temperature resistant plastic housing material ensures that unit remains cool and safe to touch during operation.

Precise Temperature Control
Built in thermostat allows our heater to be set to the precise temperature required for your application.

Reduced Installation Time
Save time and money when installing or moving the unit with our UL listed quick connects.

Compact Design
Wide range for heat options from 200W to 1200W all housed in the same compact housing.

Integrated Fan
Compact fan moves air across the heater elements to provide quick and efficient heating of the enclosure.

UL Certified
Heaters are UL Recognized to NITW2 and NITW8 standards allowing for easy integration into UL 508A panels.

PTC Heater Technology
Uses a self regulating heating element designed to prevent overheating and safe operation within your application.

FLH-TF | FAN HEATER WITH THERMOSTAT

125 W - 800 W

UL US CE

The **FLH-TF Series Fan Heaters with thermostat** follow a traditional design proven to provide heat to enclosures. These heaters are designed to protect electronics from low temperatures and moisture caused by high humidity or rapid temperature changes. **Available in 4 models.**

Surface Mountable
Unit can be direct mounted within the enclosure without the need for DIN rails.

Precise Temperature Control
Easy to read built in thermostat allows our heater to be set without tools to the precise temperature required.

Integrated Fan Switch
Allows circulating fan to run continuous or only when the unit is actively heating.

Best Temperature Guaranteed
Used predominantly for the avoidance of excessively low temperatures or excessively high humidity in the control cabinet.

Standard Performances
Standard performance ratings from 125 to 800 Watts ensure that the units will be compatible with common heater requirements.

UL Certified
Heaters are UL Recognized to NITW2 and NITW8 standards allowing for easy integration into UL 508A panels.

PRH-M | MINI RADIANT HEATERS

10 W - 30 W

NEW

The **PRH-M Mini-Radiant Heaters** are available in 3 models ranging from 10 W - 30 W. These small heaters are ideal for small outdoor enclosures, preventing condensate formation.

Easy Mounting Options

Unit can be connected to a standard DIN rail **without tools** using the included snap fastener.

Multiple Performance Ratings

The PRH-M is available in 3 different heating performance based models from 10 W to 30 W. Choose the total heat to be distributed based on your calculated requirements.

Ultra Compact Design

At just slightly over 1" wide and under 3" tall, this compact design easily installs into areas that have a limited installation space.

Durable Long-Lasting

With its rugged design, solid construction and no moving parts you can count on the PRH-M Heater to perform consistently over a long period of time.

Reduced Installation Time

The PRH-M Heater supports multiple voltage and includes a hard wired 12" (300 mm) electronic cord to easily install within the electrical enclosure.

UL Certified

Heaters are UL Recognized to NITW2 standards allowing for easy integration into UL 508A panels.

FLH | RADIANT & FAN HEATERS

30 W - 400 W

The **FLH Heaters** are available as a radiant heater or as a forced air heater for larger wattages. These heaters are designed to protect electronics from low temperatures and moisture caused by high humidity or rapid temperature changes.

Easy Mounting Options

Unit can be connected to a standard DIN rail **without tools** using the included snap fastener.

Heat Distribution

Our larger FLH 250 and FLH 400 Heaters include a fan to help circulate the heat in larger enclosures, ensuring quick and even distribution.

Durable Long-Lasting

With its rugged design and solid construction you can count on the FLH Heaters to perform consistently over a long period of time.

Reduced Installation Time

Save time and money when installing or moving the unit with our UL listed quick connects.

UL Certified

Heaters are UL Recognized allowing for integration into UL 508A panels.

FLZ 510-530 | THERMOSTATS

The FLZ 510-530 Series Thermostats are available in 3 different models. The FLZ 510 comes with a change over contact, the FLZ 520 comes with a N.C contact and the FLZ 530 comes with a N.O. contact. These are designed to work with cabinet heaters and Filterfans® to control the internal cabinet temperature.

Ultra Compact Design

At just slightly over 1.5" wide and under 3" tall, this compact design easily installs into areas that have a limited installation space.

Durable Long-Lasting

With its rugged design and solid construction you can count on the FLZ Thermostat to perform consistently over a long period of time.

Easy Mounting Options

Unit can be connected to a standard DIN rail **without tools** using the included snap fastener.

Unique Temperature Control

In combination with control cabinet heaters, they control temperature inside the control cabinet.

Models come color coded, blue dial for cooling and red dial for heating control.

Energy Savings Solution

In combination with Filterfans® the FLZ Thermostat can control the operation of the fan, turning it off and on based on a set temperature. This provides an environmental balance through energy reduction.

UL Certified for 508A Panels

Thermostats are UL Recognized allowing for integration into UL 508A panels.

*Note: The size listed on this page is for the FLZ 510. Please see the chart on the opposite page for dimensions of our FLZ 520/530 Models.

Schematics

Available Models:

FLZ 510-530
 Thermostats
 (0-60 °C or 32-140 °F)

FLZ 541-543 | TWIN THERMOSTATS

The FLZ 541-543 Series Twin Thermostats are available in 3 different models. The FLZ 541 comes with N.C./N.O. contacts, the FLZ 542 comes with N.C./N.C. contacts and the FLZ 543 comes with N.O./N.O. contacts. Unlike a single thermostat with changeover contacts, connected devices can be switched to different temperature ranges to manage the internal cabinet temperature.

Ultra Compact Design

At slightly over 2" wide and just over 3" tall, this compact design easily installs into areas that have a limited installation space.

Durable Long-Lasting

With its rugged design and solid construction you can count on the FLZ Thermostat to perform consistently over a long period of time.

Easy Mounting Options

Unit can be connected to a standard DIN rail **without tools** using the included snap fastener.

3.17 in. (80.5 mm)

Independent Controls

Control dials are color coded based on the model. The FLZ 541 comes with a red dial for controlling the heater and a blue dial for controlling the fan. The FLZ 542 comes with 2 red dials for controlling 2 heaters or a heater and alarm. The FLZ 543 comes with 2 blue dials for controlling 2 fans or a fan and alarm.

Energy Savings Solution

One unit can control two separate devices. When controlling a Filterfan® the FLZ Twin Thermostat can control the operation of the fan, turning it off and on based on a set temperature.

When also controlling a heater, the FLZ Twin Thermostat can turn the heater on and off based on enclosure temperature. This provides an environmental balance through energy reduction.

UL Certified for 508A Panels

Thermostats are UL Recognized allowing for integration into UL 508A panels.

FLZ 541-543 Series Twin Thermostats

Twin Thermostats
(0-60 °C or 32-140 °F)

FLZ 600 - 610 | HYGROSTATS

The FLZ 600-610 Series Hygrostat and combined Hygrostat/Thermostat models are ideal for controlling cabinet heaters and Filterfans® when a relative humidity is exceeded. Hygrostats help to keep the relative humidity within an enclosure above the dew point, preventing the condensation of water on electrical components and the corrosion of unprotected sheet metal.

Ultra Compact Design

At just slightly over 1.5" wide and under 3" tall, this compact design easily installs into areas that have a limited installation space.

Durable Long-Lasting

With its rugged design and solid construction you can count on the FLZ Hygrostats to perform consistently over a long period of time.

Easy Mounting Options

Unit can be connected to a standard DIN rail **without tools** using the included snap fastener.

2.36 in. (60 mm)

1.85 in. (47 mm)

Energy Savings Solution

The FLZ 600 Hygrostat can control the operation of a Filterfan® or heater, turning it on when a preset relative humidity is exceeded. This provides an environmental balance through energy reduction.

The FLZ 610 includes an additional control for operation of a Filterfan® or heater, turning it off and on based on a set temperature.

UL Certified for 508A Panels

Thermostats are UL Recognized allowing for integration into UL 508A panels.

*Note: The size listed on this page is for the FLZ 600. Please see the chart on the opposite page for dimensions of our FLZ 610 Model.

SIGNALING TECHNOLOGY

Rugged, Modern Signaling Devices for Improved Safety and Efficiency

Pfannenberg's visual and acoustic signaling devices satisfy numerous alarm, warning, and indication requirements, including: machinery operating status, process monitoring, system startup, and building or area evacuation due to fire, toxic gas leak, chemical spill, or intruder alert. With rugged construction and the ability to withstand severe environments (industrial, marine, mining, building, energy, transportation), Pfannenberg's signaling solutions are the only choice for improved safety and efficiency.

Alarm: Operation display of a machine informs the operator by means of a signaling device. These types of devices inform personnel who are nearby. These devices are not used for the indication of dangerous situations.

Warning: As a start-up signal for a machine. These types of devices warn about situations that could occur.

Indication: The evacuation alarm in case of a fire. Devices of this nature generate an alarm for emergency situations and have the highest priority.

PY X-S-05 | PYRA SERIES FLASHING LIGHTS

5 Joules (44 cd) | 60 flashes per minute

Connection

Simple electrical connection on the bottom of the casing.

SSM

Optional with Soft-Start-Module for reduction of starting current.

Safe and simple mounting

Installation options with external lugs or internal holes.

Panel mounting

Suitable for panel mounting.

IP 66

High protection system.

Colors

Housing colors: red | grey | white.
Lens colors: clear | white | yellow | amber | red | green | blue.

IK08

Impact-proof lens.

Modular design

Housing can be easily stacked side by side.

Approvals

EN 54-23 | VdS | UL | EAC
option: GL | MED.

PY X-M-05 | PY X-M-10 PY X-MA-05 | PY X-MA-10

PYRA SERIES FLASHING LIGHTS / FLASHING LIGHT SOUNDERS

5 Joules (44 cd) | 10 Joules (118 cd) | Adjustable flash rate, 100 dB (A)

reddot award 2015
winner

4 different flash rates

Choice of four different flash rates via DIP switch (0.1 | 0.5 | 0.75 | 1 Hz).

IK08

Impact-proof lens.

Panel mounting

Suitable for panel mounting.

Safe and simple mounting

Installation options with external lugs or internal holes.

Approvals

EN 54-23 | VdS | UL | EAC
option: GL | MED.

Multi-flashing light systems

Providing full synchronization on multi-flashing light systems.

Colors

Housing colors: red | grey | white.
Lens colors: clear | white | yellow | amber | red | green | blue.

IP 66

High protection system.

Options

Integrated inrush current limitation and under voltage detection.

PA 1-20 | PATROL SERIES SOUNDERS

100 - 120 dB (A)

reddot design award
winner 2013

Connection

A single terminal block in the base supports all wiring connections.

IK08

Impact-proof housing.

Safe and simple mounting

Internal and external mounting capabilities.

Mounting options

Panel mounting and surface mounting capabilities.

Colors

Housing colors: red | grey | white.

IP 66

Fastener holes are outside the sealing area – IP rating cannot be compromised.

Approvals

EN54-3 | VdS | UL | EAC | RS
option: GL | MED | CNBOP.

Available Models:

PA 1
100 dB (A)

PA 5
105 dB (A)

PA 10
110 dB (A)

PA 20
120 dB (A)

DID YOU KNOW?

The PATROL PA 1 Sounder is available as a dedicated flush panel-mount version, which includes self-tapping panel screws and mating electrical connector (the back box is not included). Panel mount adaptation kits are available for all PATROL sounders.

Visit www.pfannenbergusa.com for additional information and part numbers.

SIGNALING TECHNOLOGY

PA X 1-05 / 20-15 | PATROL SERIES FLASHING SOUNDERS

5-15 Joules (44-129 cd) | 100-120 dB (A)

Connection

1-person assembly in rooms with high ceilings. Automatic contact of top part to bottom part when assembling.

Safe and simple mounting

Internal and external mounting capabilities.

IK08

Impact-proof.

Mounting options

Panel mounting and surface mounting capabilities.

Colors

Housing colors: red | grey | white.
Lens colors: clear | white | yellow | amber | red | green | blue.

IP 66

Fastener holes are outside the sealing area – IP rating cannot be compromised.

Economical

All screw terminal clamps are redundant to support daisy-chaining of multiple sounders.

Available Models:

PA X 1-05
5 Joules (44 cd)
100 dB (A)

PA X 5-05
5 Joules (47 cd)
105 dB (A)

PA X 10-10
10 Joules (129 cd)
110 dB (A)

PA X 20-15
15 Joules (190 cd)
120 dB (A)

BR 35 | SIGNAL TOWERS

Ø 35 mm | 3 W | 4 W

Visual

The light is amplified by the internal prisms of the impact-proof, heat-resistant and dust-proof polycarbonate lens and can be easily identified from all sides.

Modular design

Modular design with 6 different color elements and 4 mounting methods offers endless combination possibilities.

Mounting methods

Stand mounting | plinth mounting | tube mounting | panel mounting.

Applications

For use in electronic production, in laboratories, in medical technology and in all other indoor applications.

6 lens colors

Clear | yellow | amber | red | green | blue.

IP 54

High protection system.

Design

Appealing design with a diameter of just 35 mm.

Connection

Connecting terminals;
single wire: 1.5 mm²,
fine wire: 0.14 - 1.5 mm².

BR 50 | SIGNAL TOWERS

Ø 54 mm | 5 W | 85 dB (A)

Visual

The light is amplified by the internal prisms of the impact-proof, heat-resistant and dust-proof polycarbonate lens and can be easily identified from all sides.

Modules

Continuous light | blinking light (1.5 Hz) | flashing light | sounder module 85 dB (A).
