Accessories

PLC drivers

Safety relays in the PNOZelog-range have a diagnostic interface for outputting diagnostic data to a PLC. The transmission of the diagnostic data is controlled by input Y5; the diagnostic data is issued at output Y32.

To read and evaluate the diagnostic data you will need to program a driver for the PLC.

Pilz supplies drivers for PLCs from various manufacturers. These are available on the "PLC Drivers" CD, under order number 874 130B.
