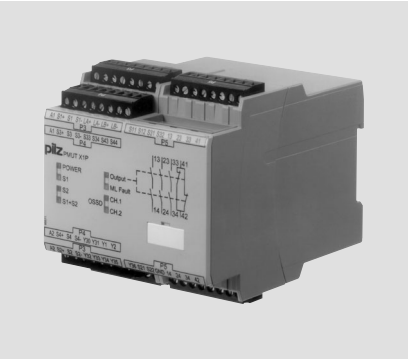
PMUT X1P



Unit for the temporary suspension of safety functions (muting)

Approvals

	PMUT X1P
c UL us LISTED	◆
TÜV SÜDDEUTSCHLAND	◆
CCC	◆

Unit features

- Positive-guided relay outputs:
  - 3 safety contacts (N/O), instantaneous
  - 1 auxiliary contact (N/C), instantaneous
- 4 inputs for muting sensors
- 1 ESPE input (2channel)
- 1 input for additional safety light barrier (dual-channel) or safety contacts
- 2 muting lamps
- Connection options for
  - Reset button
  - Key switch
  - Feedback loop
- Monitors muting lamps
- Muting mode: sequential or parallel
- LED indicators for
  - Switch status channel 1/2
  - Muting sensors
  - Light barrier
  - Simultaneity requirement
  - Muting lamp error
- Semiconductor outputs signal:
  - Switch status channel 1/2
  - Muting active
  - One of the muting lamps defective
  - Both muting lamps defective
  - Light barrier (ESPE) active
- Plug-in connection terminals (either spring-loaded terminal or screw terminal)
- See order reference for unit types

Unit description

The muting controller meets the requirements of EN 60204-1.
It may be used in safety circuits which temporarily suspend safety functions (muting), in accordance with EN 61496-1.

Safety features

The relay meets the following safety requirements:

- The circuit is redundant with built-in self-monitoring.
- The safety function remains effective in the case of a component failure.
- The correct opening and closing of the safety function relays is tested automatically in each on-off cycle.

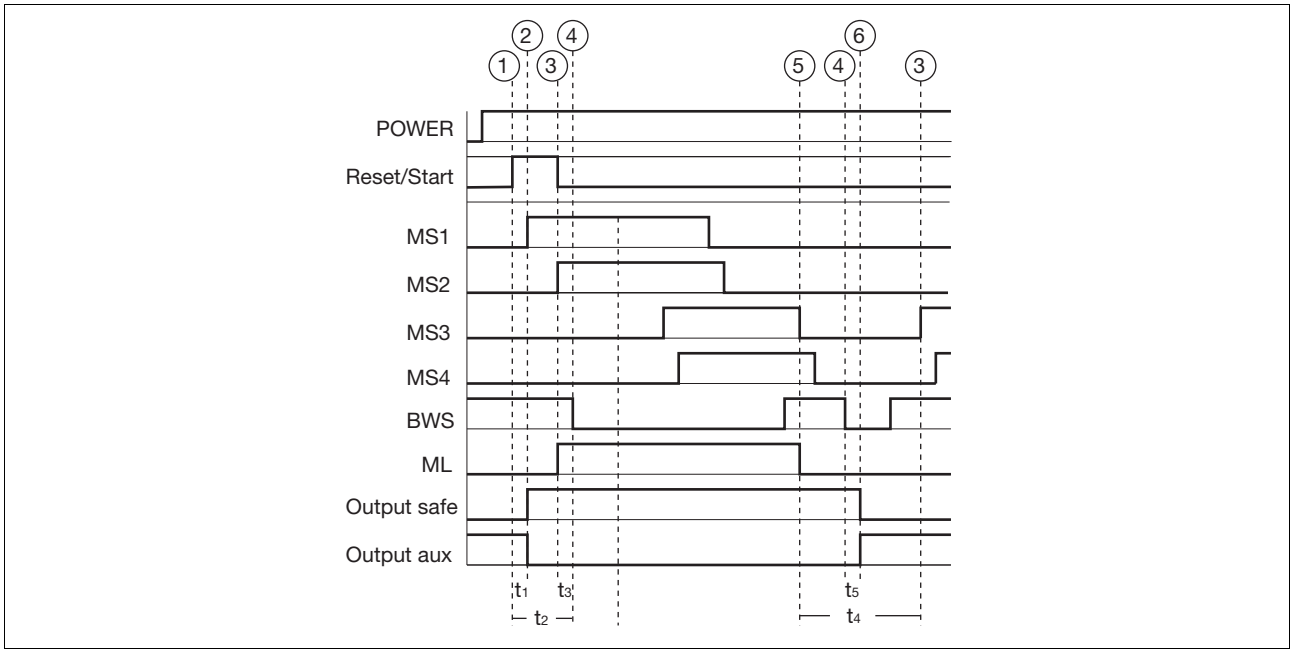
Up to Category 4, EN 954-1
PMUT X1P

Function description

- Dual-channel operation (contact or semiconductor outputs from ESPE) without detection of shorts between contacts
- Dual-channel operation (contact or semiconductor outputs from ESPE) with detection of shorts between contacts: Redundant input circuit, earth faults in the input circuit or shorts between the input circuits are detected.
- Monitored manual reset. Supply voltage must be present before the reset contact is closed. The unit is not active until the reset button has been operated.

Timing diagram



Key

- Power: Supply voltage
- Reset/start: Reset button
- ESPE: Light barrier
- MS1 ... MS2: Muting sensors
- ML: Muting lamps
- Output Safe: Safety contacts 13-14, 23-24, 33-34
- Output aux: Auxiliary contact 41-42
- ①: Operate reset button
- ②: Close safety contacts
- ③: Muting on
- ④: Light barrier interrupted
- ⑤: Muting off
- ⑥: Open safety contacts
- t_1: Switch-on delay of safety contacts
- t_2: Minimum start pulse duration
- t_3: Minimum period before light barrier may be interrupted
- t_4: Recovery time after muting off
- t_5: Delay-on de-energisation

Wiring

Please note:

- Information given in the “Technical details” must be followed.
- Outputs 13-14, 23-24, 33-34 are safety contacts, output 41-42 is an auxiliary contact (e.g. for display).
- To prevent contact welding, a fuse should be connected before the output contacts (see technical details).
- Calculation of the max. cable runs I_{max} in the input circuit:

$$I_{max} = \frac{R_{lmax}}{R_l / km}$$

R_{lmax} = max. overall cable resistance (see technical details)
R_l /km = cable resistance/km

- Use copper wire that can withstand 60/75 °C.
- Sufficient fuse protection must be provided on all output contacts with capacitive and inductive loads.
- Mechanical and optoelectronic sensors (safety light barriers, safety light guards) are suitable for use.
- The safety contacts can be used to shutdown the hazardous movement.
- Only safe contact outputs (e.g. from safety light barriers) may be used on S51-S52 and S61-S62. Do **not** connect safety light barriers to semiconductor outputs.

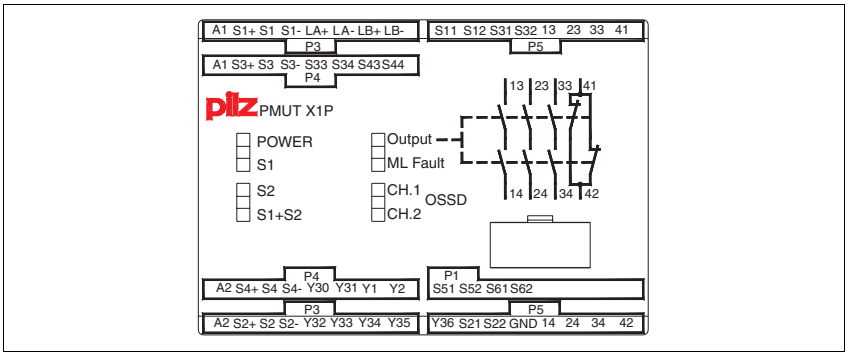
Terminal configuration



Installation

- The safety relay should be installed in a control cabinet with a protection type of at least IP54.
- Use the notch on the rear of the unit to attach it to a DIN rail.
- Ensure the unit is mounted securely on a vertical DIN rail (35 mm) by using a fixing element (e.g. retaining bracket or an end angle).

Dimensions

* with spring-loaded terminals
