Description

- 22.5 mm P-99 housing, DIN-Rail mounting
- Semiconductor outputs, short-circuit proof:
 - 2 safety outputs
 - 1 auxiliary output
 - 2 test pulse outputs
- Connections for
 - E-STOP button
 - safety gate limit switch
 - Pressure mat, light barrier and proximity switch evaluation devices
 - Reset button
- Auxiliary output can also be used as a diagnostic output
It is possible to program the driver for reading diagnostic data yourself. However, the CD „PLC Drivers for PNOZelog“ is also

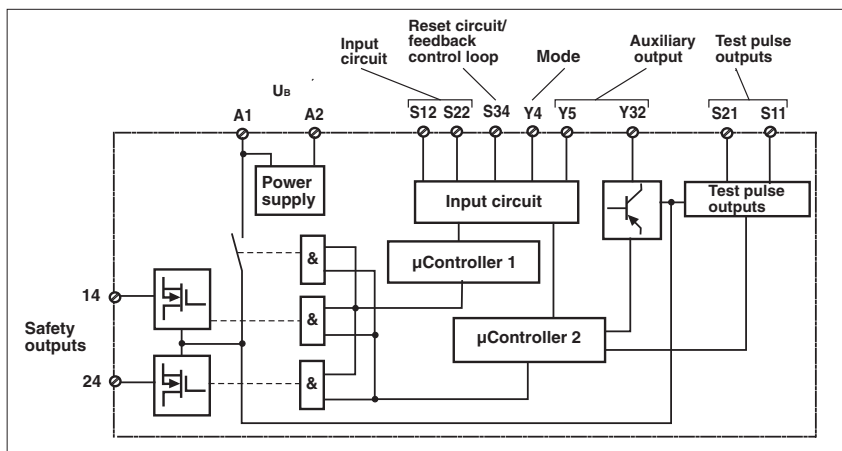

available. This contains pre-programmed drivers for the following controllers:
- SIMATIC S7

- LEDs for switching status and faults in channel 1/2 and for supply voltage
- Shorts across the input contacts are detected by means of test pulse outputs
- Increase in the number of safety contacts available by connecting expander modules

Operating modes

- Single-channel operation
- Dual-channel operation
- Automatic reset
- Monitored manual reset

External wiring

● Example 1

Single-channel emergency stop wiring with monitored manual reset without short-circuit recognition

● Example 4

Dual-channel safety gate control with automatic reset without start-up test and without short-circuit recognition

– Key

S1/S2:	E-STOP or safety gate switch
S3:	Reset button
	Switch operated
	Gate open
	Gate closed

● Example 2

Dual-channel emergency stop wiring with monitored manual reset without short-circuit recognition

● Example 5

Dual-channel safety gate control with monitored manual reset without short-circuit recognition

● Increase in the number of contacts

The number of output contacts can be increased by using expander modules or relays/contactors with positive-guided contacts.

● Example 3

Dual-channel emergency stop wiring with monitored manual reset and shorts across the input contacts are detected

● Example 6

Dual-channel safety gate control with automatic reset and start-up test, shorts across the input contacts are detected
