## PSEN ma1.3a/b-22

### Unit features

- ▶ The actuator **PSEN ma1,3-08** belongs to the safety switch
- ▶ Safety switch with cable (5 m/ 10 m)
- ▶ 2 reed contacts (N/O)
- ▶ 1 auxiliary contact (N/O)
- ▶ Assured operating distance: **8 mm**
- ▶ Assured release distance: **15 mm**
- ▶ Safety switch and actuator with M12 round design
- ▶ Works magnetically
- ▶ Switching voltage 24 VDC
- ▶ LED to display switch status

Magnetic safety switches for monitoring the position of movable guards in accordance with EN 60947-5-3

### Unit description

The safety switch meets the requirements of EN 60204-1 and IEC 60204-1.

The safety switch only complies with EN 60947-5-3 in conjunction with the PSEN ix1 interface, the actuator **PSEN ma1,3-08** and its approved evaluation devices.

The safety switch should only be connected to the evaluation devices listed under "Connections".

### Approvals

PSEN ma1.3a/b-22	
	Pending
	Pending

### Block diagram

### Function description

If the actuator is within the response range, the magnets switch the reed contacts on the safety switch. If the actuator is outside the response range (safety gate open), the reed contacts on the safety switch will switch.

## PSEN ma1.3a/b-22

### Operating distances

### Lateral and vertical offset

#### with M12 actuator

- ▶ Assured operating distance  $S_{ao}$  in mm:

		Vertical offset		
lateral offset	0	2	4	
	0	8,0	7,0	5,5
	2	7,0	6,0	4,0
	4	6,0	5,0	3,0

- ▶ Assured release distance  $S_{ar}$ :  
Max. 15 mm with all vertical and lateral offsets

The stated values are valid at a temperature of 20 °C.

#### Wiring

Please note:

- ▶ Information given in the “Technical details” must be followed.
- ▶ Calculation of the max. cable runs  $l_{max}$  in the input circuit:

$$l_{max} = \frac{R_{lmax}}{R_l / km}$$

$R_{lmax}$  = max. overall cable resistance (see Technical details)  
 $R_l / km$  = cable resistance/km

- ▶ When using evaluation devices with delay-on de-energisation contacts, please note:
  - Delay time  $\leq 30$  s: Delay-on de-energisation contacts satisfy the requirements of category 3 in accordance with EN 954-1 and the requirements of a PDF with single-fault tolerance (PDF-S).
  - Delay time  $\geq 30$  s: Delay-on de-energisation contacts satisfy the requirements of Category 1 in accordance with EN 954-1 and the requirements of a PDF with designed reliability (PDF-D).
- ▶ In the following commissioning cases, check the function that detects shorts across contacts:
  - On evaluation devices with DC supply voltage: Overall cable resistance  $\geq 15$  Ohms per channel
  - On evaluation devices with AC supply voltage: Overall cable resistance  $\geq 25$  Ohms per channel
  - For details of how to perform the test for shorts across the contacts, please refer to the operating manual for the relevant evaluation device.

### Connections

The safety switch is shown in an unoperated condition.

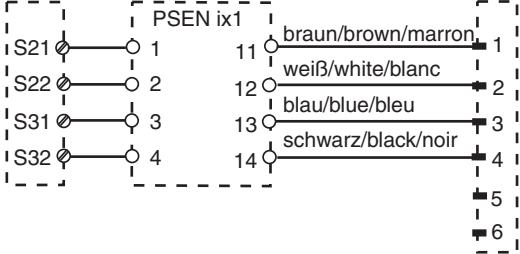

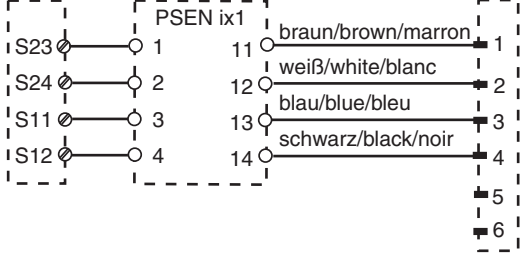

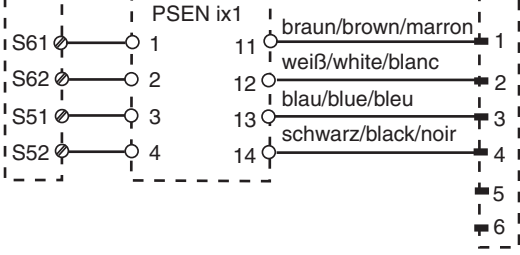

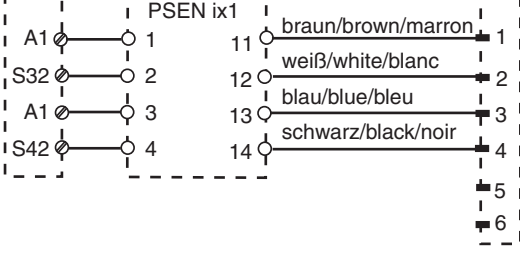

- ▶ Auxiliary contact with LED connection

- ▶ Connection to PNOZ X, PNOZelog, PNOZpower, PNOZsigma

## PSENmag

### PSEN ma1.3a/b-22

- ▶ Connection to PSS with and without SafetyBUS p

#### CAUTION!

The safety switches may only be operated on a PSS in conjunction with standard function block SB064 or SB066.

## PSENmag PSEN ma1.3a/b-22

### Installation

- ▶ When installing make sure you comply with the requirements of DIN EN 1088
- ▶ If possible, do not install the safety switch and actuator on to ferromagnetic material. Changes to the operating distances are to be expected.
- ▶ The distance between two systems comprising safety switch and actuator must be at least 25 mm.
- ▶ Safety switch and actuator
  - Keep away from iron swarf
  - Do not expose to strong magnetic fields
  - Do not expose to heavy shock or vibration

- Do not use as a limit stop
- For fixed wiring only
- ▶ The unit can be installed in any position. The safety switch and actuator must be installed so that the bevelled surfaces face each other precisely.
- ▶ The safety switch and actuator should only be secured using M12 nuts made of non-magnetic material (e.g. Messing). Torque setting max. 300 Ncm.

### Adjustment

- ▶ The safety switch may only be used with the corresponding actuator **PSEN ma1,3-08**.

- ▶ Always test the function with the PSEN ix1 interface and one of the approved evaluation devices.
- ▶ The stated operating distances (see Technical details) only apply when the safety switch and actuator are installed facing each other in parallel. Switching distances may deviate if other arrangements are used. Note the maximum permitted lateral and vertical offset (see "Operating distances" and "Max. lateral and vertical offset").

### Dimensions in mm

### NOTICE

This data sheet is only intended for use during configuration. For installation and operation, please refer to the op-

erating instructions supplied with the unit.

### Technical details

Switching distances	
Assured operating distance $S_{ao}$	8 mm
Min. operating distance $S_{omin}$	0.5 mm
Assured release distance $S_{ar}$	15 mm
Switching voltage	24 V
Max. switching current for reed contacts	0.20 A
Max. switching current for auxiliary contacts	10 mA
Max. breaking capacity for reed contacts	5.0 W
Max. switch frequency	1 Hz
Actuator	PSEN ma1,3-08
Ambient temperature	-25 - 70 °C
