PSEN 1.2p-22

Magnetic safety switches for monitoring the position of movable guards in accordance with EN 60947-5-3

Approvals

	PSEN 1.2p-22
c UL us LISTED	◆
	◆

Unit features

- The actuator **PSEN 1,2-20** belongs to the safety switch
- 2 reed contacts (N/O)
- Assured operating distance: **8 mm**
- Assured release distance: **26 mm**
- Round design
- Works magnetically
- Switching voltage 24 VDC

Unit description

The safety switch meets the requirements of EN 60204-1 and IEC 60204-1.
The safety switch only complies with EN 60947-5-3 in conjunction with the PSEN ix1 interface, the actuator **PSEN 1,2-20** and its approved evaluation devices.
The safety switch should only be connected to the evaluation devices listed under "Connections".

Function description

If the actuator is within the response range, the magnets switch the reed contacts on the safety switch. If the actuator is outside the response range (safety gate open), the reed contacts on the safety switch will switch.

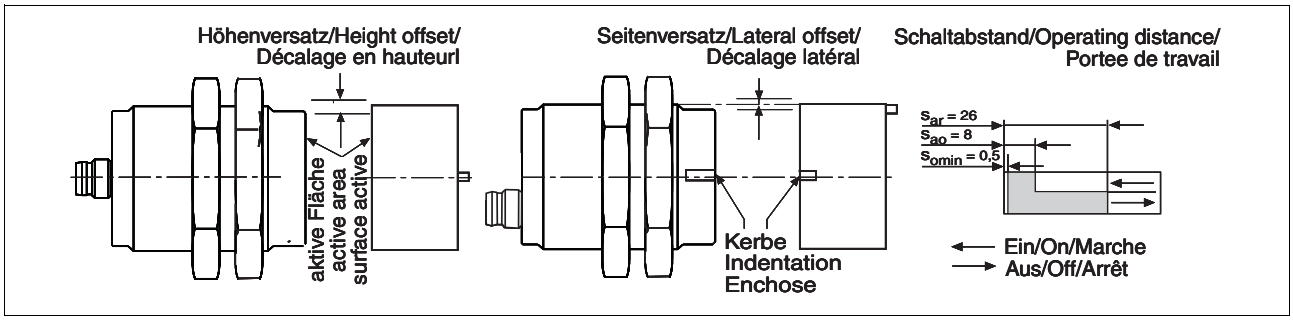
Operating distances



Lateral and vertical offset

- Assured operating distance S_{ao} in mm

Höhenversatz/Height offset/ Décalage en hauteur

Seitenversatz/Lateral offset/Décalage latéral	1,0	2,0	3,0	4,0	5,0
1,0	7,5	7,5	7,0	7,0	5,5
2,0	7,5	7,0	7,0	6,5	5,5
3,0	7,0	7,0	7,0	6,0	5,5
4,0	6,5	6,5	6,0	5,5	5,0
5,0	6,0	6,0	6,0	5,0	4,5

- Assured release distance S_{ar}: Max. 26 mm with all vertical and lateral offsets

The stated values are valid at a temperature of 20 °C.

Wiring

Please note:
- Information given in the “Technical details” must be followed.
- Calculation of the max. cable runs l_{max} in the input circuit:

$$l_{max} = \frac{R_{lmax}}{R_l / km}$$

R_{lmax} = max. overall cable resistance (see Technical details)
R_l / km = cable resistance/km

- When using evaluation devices with delay-on de-energisation contacts, please note:
  - Delay time ≤30 s: Delay-on de-energisation contacts satisfy the requirements of category 3 in accordance with EN 954-1 and the requirements of a PDF with single-fault tolerance (PDF-S).
  - Delay time ≥ 30 s: Delay-on de-energisation contacts satisfy the requirements of Category 1 in accordance with EN 954-1 and the requirements of a PDF with designed reliability (PDF-D).
- In the following commissioning cases, check the function that detects shorts across contacts:
  - On evaluation devices with DC supply voltage: Overall cable resistance ≥ 15 Ohms per channel
  - On evaluation devices with AC supply voltage: Overall cable resistance ≥ 25 Ohms per channel
  - For details of how to perform the test for shorts across the contacts, please refer to the operating manual for the relevant evaluation device.

Connections

NOTICE
The colour marking for the connection lead only applies for the cable that Pilz supplies as an accessory.
The safety switch is shown in an unoperated condition.

- Connection to PSS with and without SafetyBUS p

Schutztür/safety gate/protecteur mobile Schaltertyp 3/switchtype 3/type du capteur 3 I0, I1: Eingänge/inputs/entrées O16, O17: Taktausgänge/test pulse outputs/sorties impulsionelles	
CAUTION!
The safety switches may only be operated on a PSS in conjunction with standard function block SB064 or SB066.

Installation

- The unit can be installed in any position. However, the safety switch and actuator must be installed so that the two notches are exactly opposite each other (see diagram: "Operating distances").
- A nib on the actuator prevents it twisting (see diagram: "Dimensions"). Drill diameter: 2 mm.
- If possible, do not install the safety switch and actuator on to ferromagnetic material. Changes to the operating distances are to be expected.
- The torque setting for the M30 nuts is max. 300 Ncm.
- The actuator should be secured using an M4 or M5 screw made of non-magnetic material (e.g. Messing).
- The distance between two systems comprising safety switch and actuator must be at least 25 mm.
- Safety switch and actuator
  - Keep away from iron swarf
  - Do not expose to strong magnetic fields
  - Do not expose to heavy shock or vibration
  - Do not use as a limit stop

Adjustment

- The safety switch may only be used with the corresponding actuator **PSEN 1,2-20**.
- Always test the function with the PSEN ix1 interface and one of the approved evaluation devices.
- The stated operating distances (see Technical details) only apply when the safety switch and actuator are installed facing each other in parallel. Switching distances may deviate if other arrangements are used. Note the maximum permitted lateral and vertical offset (see "Operating distances" and "Max. lateral and vertical offset").
