Introduction

Validity of documentation

This documentation is valid for the product PNOZ s60. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

**INFORMATION**

This gives advice on applications and provides information on special features.

Safety**Intended use**

The voltage monitoring relay operates as a device for the safe monitoring of 1-phase or 3-phase supplies with no voltage applied with neutral conductor. The three-phase network to be monitored must be earthed at the star point. It may be used in

- ▶ Safety circuits in accordance with VDE 0113-1 and IEC 60204-1
- ▶ Standard for Safety – UL 6420 Chapter 5.4

The voltage monitoring relay prevents the safety contacts from closing until it is guaranteed that the plant has no voltage applied. As soon as a hazardous voltage is detected, the safety contacts are opened.

The following is deemed improper use in particular

- ▶ Any component, technical or electrical modification to the product,
- ▶ Use of the product outside the areas described in this manual,
- ▶ Use of the product outside the technical details (see [Technical details](#)  18]).

**NOTICE****EMC-compliant electrical installation**

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations**Safety assessment**

Before using a device it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- ▶ Are familiar with the basic regulations concerning health and safety / accident prevention,
- ▶ Have read and understood the information provided in the section entitled Safety
- ▶ Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

- ▶ The product was used contrary to the purpose for which it is intended,
- ▶ Damage can be attributed to not having followed the guidelines in the manual,
- ▶ Operating personnel are not suitably qualified,
- ▶ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

- ▶ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.
- ▶ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety

The unit meets all the necessary conditions for safe operation. However, please note the following:

- ▶ Note for overvoltage category III: If on the device there are voltages higher than 300 V measured to the earth potential, connected control elements and sensors must have a rated insulation voltage of at least 600 V.

Unit features

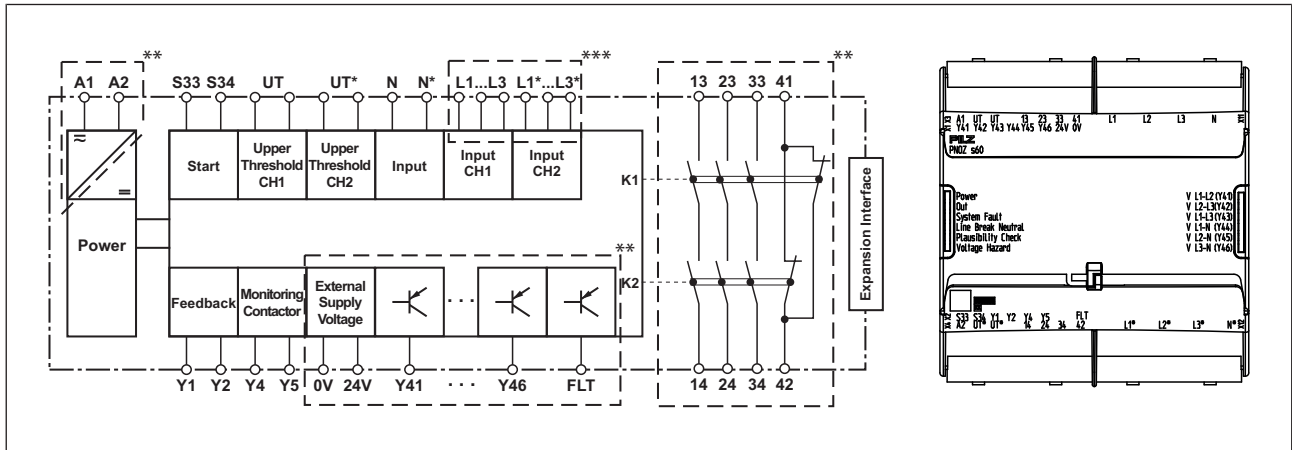

- ▶ Redundant measuring inputs for 3-phase AC circuits
- ▶ Positive-guided relay outputs:
 - 3 safety contacts (N/O), instantaneous
 - 1 auxiliary contact (N/C), instantaneous
- ▶ 7 semiconductor outputs
- ▶ LED display for:
 - Supply voltage
 - Switch state of the safety contacts
 - Diagnostics
 - State of measuring circuit
- ▶ Semiconductor outputs signal:
 - Status of measuring circuit
 - Error
- ▶ Input circuit (Y4-Y5) and feedback loop (Y1-Y2) to monitor external contactors or switch disconnectors
- ▶ Protective separation between the external voltage supply and the hazardous voltage circuits
- ▶ Plug-in connection terminals (either spring-loaded terminal or screw terminal)
- ▶ A connector can be used to connect contact expansion module PNOZsigma:
 - PNOZ s7
 - PNOZ s7.1
 - PNOZ s7.2
 - PNOZ s8
 - PNOZ s9
 - PNOZ s10
 - PNOZ s11

Safety features

The safety relay meets the following safety requirements:

- ▶ The circuit is redundant with built-in self-monitoring.
- ▶ The safety function remains effective in the case of a component failure.
- ▶ The correct opening and closing of the safety function relays is tested automatically in each on-off cycle.

Block diagram/terminal configuration

**Insulation against the non-marked area and between the relay contacts: Basic insulation (overvoltage category III) at 300 V, 4 kV. Insulation against the other areas marked with **: Protective separation (overvoltage category III) at 300 V, 6 kV.

***Insulation against all other areas and between the measuring connections L1^(*), L2^(*), L3^(*): Protective separation (overvoltage category III) at 600 V, 8 kV

Function description

The voltage monitoring relay PNOZ s60 operates as a threshold switch. It measures the three phase voltages L1, L2, L3. The switching threshold is selectable, 6 V or 12 V. The N/C contact of the monitored contactor or switch disconnecter must be connected to input circuit Y4-Y5 and the measuring voltages must be connected to the measuring circuit (L1^(*), L2^(*), L3^(*)). When the supply voltage is applied, the "POWER" LED will light.

- ▶ Input circuit Y4-Y5 is open (contactor active or switch disconnecter switched on) or one of the measuring voltages is greater than the switching threshold
 - The safety contacts 13-14, 23-24 and 33-34 are open.
 - Auxiliary contact 41-42 is closed.
- ▶ Input circuit Y4-Y5 is closed (contactor inactive or switch disconnecter switched off), feedback loop Y1-Y2 is closed (expansion contactor de-energised), start circuit S33-S34 is closed and all measuring voltages are lower than the switching threshold
 - The safety contacts 13-14, 23-24 and 33-34 are closed.
 - Auxiliary contact 41-42 is open.
- ▶ Self test: An internal self test is carried out during initial commissioning and each time the supply voltage is switched off and on. The process simulates switching all measuring voltages on and then off again. The unit is ready for operation once the self test has been completed successfully.
- ▶ Increase in the number of available instantaneous safety contacts by connecting contact expansion modules or expansion contactors; Connectors can be used to connect contact expansion modules PNOZsigma.

The state of the measuring circuits is displayed via the auxiliary outputs Y41 ... Y46 and the relevant LEDs:

Measuring voltage	Semiconductor	LED	Description
L1 - L2	Y41	VL1-L2 (Y41)	LED lights when the measuring voltage > 110 V
L2 - L3	Y42	VL2-L3 (Y42)	LED lights when the measuring voltage > 110 V
L1 - L3	Y43	VL1-L3 (Y43)	LED lights when the measuring voltage > 110 V
L1 – N	Y44	VL1-N (Y44)	LED lights when the measuring voltage > 64 V
L2 – N	Y45	VL2-N (Y45)	LED lights when the measuring voltage > 64 V
L3 – N	Y46	VL3-N (Y46)	LED lights when the measuring voltage > 64 V

Table of functions

- ▶ Automatic start, start circuit S33-34 is closed
- ▶ The supply voltage is connected
- ▶ Base unit only, excluding expansion modules
- ▶ If the N/O contact of the safety contacts (13-14, 23-24 and 33-34) are closed, then the N/ C contact (41-42) is open
- ▶ U_{TH} = Switching threshold (see [Technical details](#) [18])

Installation

Install base unit without contact expansion module:

- ▶ Ensure that the plug terminator is inserted at the side of the unit.

Connect base unit and PNOZsigma contact expansion module:

- ▶ Remove the plug terminator at the side of the base unit and at the contact expansion module.
- ▶ Connect the base unit and the contact expansion module to the supplied connector before mounting the units on the DIN rail.

Control cabinet installation

- ▶ The safety relay should be installed in a control cabinet with a protection type of at least IP54.
- ▶ When installing, a distance must be maintained above and below the relay and to other heat-generating devices. We recommend the following distances:
 - Above and below: 30 mm
 - To other heat-generating devices: 20 mm

- ▶ The ambient temperature of the product in the control cabinet must not exceed the figure stated in the technical details, otherwise air conditioning may be required.
- ▶ Use the notch on the rear of the unit to attach it to a DIN rail (35 mm).
- ▶ When installed vertically: Secure the unit by using a fixing element (e.g. retaining bracket or end angle).
- ▶ Push the device upwards or downwards before lifting it from the DIN rail.

Wiring

NOTICE

Connect the measuring voltages L1 and L1*, L2 and L2*, L3 and L3*, and N and N* each to separate terminals on the plant, so that at least one measuring voltage will be present if a terminal screw should come away unintentionally (single fault tolerance).

NOTICE

To meet the requirements of the safety circuits, separate wires in separate multicore cables must be used for the measuring voltages L1, L2, L3, N and the measuring voltages L1*, L2*, L3*, N*.

NOTICE

Ensure that there is sufficient fuse protection for the connection cables at terminals L1, L2, L3, L1*, L2*, L3*!

NOTICE

To prevent contact welding, a fuse should be connected before the output contacts (see [Technical details \[18\]](#)).

Please note:

- ▶ Information given in the "[Technical details \[18\]](#)" must be followed.
- ▶ Outputs 13-14, 23-24, 33-34 are safety contacts; output 41-42 is an auxiliary contact (e.g. for display).
- ▶ Auxiliary contact 41-42 should **not** be used for safety circuits!
- ▶ Outputs Y41-46 and FLT are auxiliary outputs, e.g. for communication with a PLC or display. Do not use auxiliary outputs Y41-Y46 and FLT for safety circuits!
- ▶ Semiconductor outputs should **not** be used for safety circuits!
- ▶ There is no bridging of the semiconductor supply in the event of supply interruptions! Ensure that there is sufficient voltage bridging on the semiconductor supply voltage.
- ▶ Do not connect undesignated terminals.

- ▶ Connect the neutral conductors N and N* to the earth connection or the neutral conductor of the three phase supply.

- ▶ Calculation of the max. cable length l_{max} for the N-cable:

$$l = \frac{R \cdot A}{\rho_{Cu}}$$

R_{lmax} = max. overall cable resistance (see [Technical details \[18\]](#))

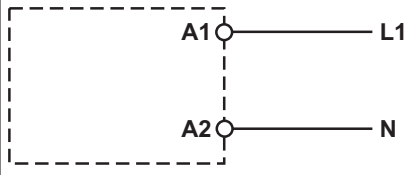

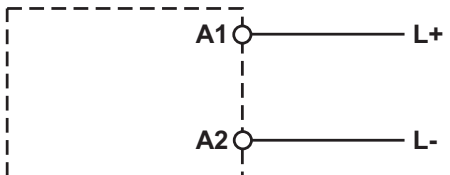

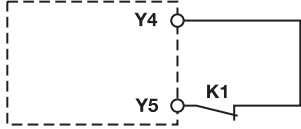

A = Cross-sectional area of a round conductor

ρ_{Cu} = Specific resistance:

$$\rho_{Cu} = 1,7 \cdot 10^{-2} \frac{\Omega mm^2}{m}$$

- ▶ Use copper wire that can withstand 60/75 °C.
- ▶ Cables that have to be laid outside the control cabinet must be protected from mechanical damage, e.g. by installing them in a conduit.
- ▶ A SELV/PELV voltage source can be connected to 24 VDC (external supply voltage). Ensure that there is sufficient fuse protection for the SELV-PELV voltage sources.
- ▶ Ensure that there is sufficient fuse protection on all output contacts with capacitive and inductive loads (see [Technical details \[18\]](#)).
- ▶ Do not switch low currents using contacts that have been used previously with high currents.
- ▶ Ensure the wiring and EMC requirements of EN 60204-1 are met.
- ▶ The three-phase network must be earthed in the star point.

Preparing for operation

Supply voltage	AC	DC
		
Input circuit		
Contactor to be monitored		

Measuring circuit, three-phase measurement		
Measuring voltage L1		
Measuring voltage L2		
Measuring voltage L3		
Measuring voltage N		
Measuring circuit, single-phase measurement		
Measuring voltage L1		
Start circuit	Automatic start	Manual start
Feedback loop	with feedback loop monitoring	without feedback loop monitoring
Contacts from external contactors or bridge		
Semiconductor output		
The semiconductor outputs require an external 24 VDC supply.		

Switchable switching threshold	Switching threshold 6 V (no bridge)	Switching threshold 12 V
Upper Threshold CH1		
Upper Threshold CH2		

NOTICE

If UT or UT* is not bridged, the 6 V switching threshold will apply automatically.

NOTICE

No switch contacts may be connected to UT or UT*.

Connection to PNOZsigma contact expansion modules PNOZ s7, PNOZ s7.1, PNOZ s7.2, PNOZ s8, PNOZ s10, PNOZ s11	
The input circuit is connected and evaluated via the connector	

The wiring will differ if you are using the contact expansion module PNOZ s9. Please note the following:

2-channel input circuit	
The input circuit is connected and evaluated via the connector	

INFORMATION

If a base unit and a contact expansion module are linked via the connector, no additional wiring is necessary. Do not connect A1 to the contact expansion module!

Legend

- ▶ S1: Start button

Operation

When the relay outputs are switched on, the mechanical contact on the relay cannot be tested automatically. Depending on the operational environment, measures to detect the non-opening of switching elements may be required under some circumstances.

When the product is used in accordance with the European Machinery Directive, a check must be carried out to ensure that the safety contacts on the relay outputs open correctly. Start the device again or open the safety contacts (switch off output), so that the internal diagnostics can check the correct opening of the safety contacts

- ▶ for SIL CL 3/PL e at least 1x per month
- ▶ for SIL CL 2/PL d at least 1x per year

NOTICE

The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

NOTICE

If the measuring voltages are below the set switching threshold for longer than 24 hours, the PNOZ s60 must be restarted (switch the supply voltage off and on).

Status indicators

INFORMATION

Several status indicators and error indicators may occur simultaneously.

The unit is ready for operation when the Power LED is permanently lit.

LEDs indicate the status and errors during operation:

-  LED on
-  LED flashes
-  LED off

	POWER Supply voltage is present.
	OUT Safety contacts are closed.
	SYSTEM FAULT see Faults - malfunctions [ 16]
	SYSTEM FAULT Internal housing temperature is between 75 ... 85 °C.
	LINE BREAK NEUTRAL Open circuit between N and N*.
	PLAUSIBILITY CHECK Input circuit (Y4-Y5) open and measuring voltage is lower than the set switching threshold.
	VOLTAGE HAZARD Input circuit (Y4-Y5) closed and measuring voltage is higher than the set switching threshold.
	VL1-L2(Y41) ... VL3-N(Y46) State of measuring voltage (see Function description [ 8])

Faults - malfunctions

- ▶ The "PLAUSIBILITY CHECK" LED lights: Measuring voltage is lower than the switching threshold, although input circuit Y4-Y5 is open.
- ▶ The "SYSTEM FAULT" LED lights:
 - Open circuit on at least one measuring cable
 - Time difference between the two measuring channels is too great
 - Internal fault
 - Internal housing temperature above 85 °C
 - Fault on the expansion module/terminator not connected
- ▶ The "VOLTAGE HAZARD" LED lights: At least one measuring voltage is higher than the switching threshold, although input circuit Y4-Y5 is closed.
- ▶ Malfunctions of the safety contacts (13-14, 23-24, 33-34): If the contacts have welded, re-activation will not be possible after the input circuit has opened.

Safety characteristic data

NOTICE

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015	EN ISO 13849-1: 2015	EN 62061 SIL CL	EN 62061 PFH _D [1/h]	IEC 61511 SIL	IEC 61511 PFD	EN ISO 13849-1: 2015 T _M [year]
	PL	Category					
–	PL e	Cat. 4	SIL CL 3	4,13E-10	SIL 3	3,56E-05	20

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAscal software tool to calculate the safety function's SIL/PL values.

CAUTION!

It is essential to consider the relay's service life graphs. The relay outputs' safety-related characteristic data is only valid if the values in the service life graphs are met.

The PFH value depends on the switch frequency and the load of the relay output. If the service life graphs are not accessible, the stated PFH value can be used irrespective of the switch frequency and the load, as the PFH value already considers the relay's B10d value as well as the failure rates of the other components.

Supplementary data

Service life graph

The service life graphs indicate the number of cycles from which failures due to wear must be expected. The wear is mainly caused by the electrical load; the mechanical load is negligible.

Fig.: Service life graphs at 24 VDC and 230 VAC

Example

- ▶ Inductive load: 0.2 A
- ▶ Utilisation category: AC15
- ▶ Contact service life: 1 000 000 cycles

Provided the application to be implemented requires fewer than 1 000 000 cycles, the PFH value (see [Technical details \[18\]](#)) can be used in the calculation.

To increase the service life, sufficient spark suppression must be provided on all relay contacts. With capacitive loads, any power surges that occur must be noted. With DC contactors, use flywheel diodes for spark suppression.

Permitted operating height

The values stated in the technical details apply to the use of the device in operating heights up to max. 2000 m above sea level. When used in greater heights, constraints have to be taken into account:

- ▶ Permitted maximum operating height 5000 m
- ▶ Reduction of the max. measuring voltage, the max. operating voltage and the max. voltage at the output relays for applications with protective separation:

Max. operating height	Max. measuring voltage Phase - Phase Phase - Neutral	Max. operating voltage	Max. voltage at the out- put relays
3000 m	300 V	150 V	150 V
4000 m	300 V	150 V	150 V
5000 m	150 V	150 V	150 V

- ▶ Reduction of the max. measuring voltage, the max. operating voltage and the max. voltage at the output relays for applications with basic insulation:

Max. operating height	Max. measuring voltage Phase - Phase Phase - Neutral	Max. operating voltage	Max. voltage at the out- put relays
3000 m	600 V	150 V	150 V
4000 m	600 V	150 V	150 V
5000 m	300 V	150 V	150 V

- ▶ From an operating height of 2000 m the max. permitted ambient temperature is reduced by 0.5 °C/100 m

Operating height	Permitted ambient temperature
3000 m	50 °C
4000 m	45 °C
5000 m	40 °C

Order reference

Product

Product type	Features	Connection type	Order no.
PNOZ s60	24 - 48 VAC/DC	Screw terminals	750 600
PNOZ s60	100 – 240 VAC/DC	Screw terminals	750 601
PNOZ s60	24 - 48 VAC/DC	Spring-loaded terminals	751 600
PNOZ s60	100 – 240 VAC/DC	Spring-loaded terminals	751 601

Accessories

Connector

Product type	Features	Order no.
PNOZ s terminator plug (10 pieces)	Connector for terminating a PNOZsigma base unit or PNOZsigma expansion module, 10 pieces	750 010
PNOZ s connector (10 pieces)	Connector for connecting a PNOZsigma base unit to a PNOZsigma expansion module, 10 pieces	750 020

EC declaration of conformity

This product/these products meet the requirements of the directive 2006/42/EC for machinery of the European Parliament and of the Council. The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/downloads.

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.
