Introduction

Validity of documentation

This documentation is valid for the product PSEN opII4B Series from Version 1.0.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

INFORMATION

This gives advice on applications and provides information on special features.

Overview

Safety light curtains of the PSEN opII4B Series are electrosensitive protective equipment (ESPE type: 4) in accordance with DIN EN 61496-1 and DIN EN 61496-2 (AOPD) for workspaces in which machines, robots, and automated systems might pose a physical danger to their operators.

Unit features

- ▶ Resolution
 - 170 mm at a range of 0.2 - 15 m
 - 300 mm at a range of 10 - 55 m
- ▶ Infrared protected field is generated
- ▶ LED indicator for status information
- ▶ Optical synchronisation of transmitters and receivers
- ▶ Beam coding A and B for greater insensitivity (see [Installing several safety light curtains in parallel](#)  20)
 - to stray light and short-term interruptions of the protected field
 - to mutual interference when using two safety light curtains with the same alignment
- ▶ Connection to evaluation devices
 - PDP67 ION and PDP67 ION HP: 5-pin M12 two-sided connector (see [Order reference for accessories, connection to PDP67](#)  55)
 - all other suitable evaluation devices (see [System connection](#)  31): 5-pin M12 one-sided connector and open cable end connection to clamping sleeves (see [Order reference for accessories, connection to other evaluation devices](#)  55)
- ▶ Aluminium alloy housing
- ▶ Die-cast zinc end caps
- ▶ Shock resistance
 - Bracket Swivel-Mount: 10g
 - Bracket Adv Bracket Kit: 50g
- ▶ Front panel of PC
- ▶ No dead zone in any protected field heights
- ▶ Standard installation kit with flexible bracket (swivel mount) (included in delivery) to hold the transmitter/receiver
 - For standard application
 - Transmitter/receiver remains rotatable for proper orientation

- ▶ PSEN opII Adv Bracket Kit (available as an [accessory](#)  54) as a bracket for transmitter/receiver
 - Transmitter/receiver can be rotated on the bracket for alignment purposes
 - Protected field heights of 450 mm – 600 mm, including: 1 PSEN opII Adv Bracket Kit2 (= 2 clamping units per transmitter and receiver)
 - Protected field heights of 750 mm – 1200 mm, including:
1 PSEN opII Adv Bracket Kit3 (= 3 clamping units per transmitter and receiver)
 - Protected field heights of 1350 mm – 1500 mm, including:
2 PSEN opII Adv Bracket Kit2 (= 4 clamping units per transmitter and receiver)

Unit view

Safety

Intended use

Safety light curtains in the PSEN opII4B Series are electrosensitive protective equipment of the ESPE type 4. They are used to protect personnel and systems. The safety light curtains are designed to

- ▶ Secure danger zones within buildings and
- ▶ Secure access within buildings with the following resolution:
 - 170 mm at a range of 0.2 - 15 m
 - 300 mm at a range of 10 - 55 m

The safety light curtain may only be used for personal protection on machinery if

- ▶ The safety light curtain can stop the hazardous state and
- ▶ The safety light curtain controls the machine start-up and
- ▶ The safety assessment does not specify a better resolution than that stated in the [Technical details](#) [ 43].

The safety level PL e (Cat. 4)/SIL CL 3 is only achieved if

- ▶ The safety outputs must be processed safety-related in 2-channel mode.

The safety light curtain is not equipped with a restart interlock.

If the safety assessment necessitates a restart interlock, this feature must be ensured within the plant's programmable safety system. The system may not be started in the hazardous area following a protection violation if personnel are still in the hazardous area.

Prevent circumvention of the protected field. This means that other safety devices and safeguards may be required in addition to the safety light curtain. These should be determined via a safety assessment based on the specific application area and specific local conditions (e.g. official specifications).

Refer to IEC/TS 62046 to determine other necessary safeguards for securing the danger zone.

Their application must fulfil the site's relevant national regulations (e. g. EN 60204-1, NFPA 79:17-7).

The following is deemed improper use in particular

- ▶ Any component, technical or electrical modification to the product,
- ▶ Use of the product outside the areas described in this manual,
- ▶ Use of the product outside the technical details (see [Technical details](#) [ 43]).

NOTICE

EMC-compliant electrical installation

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations

Safety assessment

Before using a device it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- ▶ Are familiar with the basic regulations concerning health and safety / accident prevention,
- ▶ Have read and understood the information provided in the section entitled Safety
- ▶ Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

- ▶ The product was used contrary to the purpose for which it is intended,
- ▶ Damage can be attributed to not having followed the guidelines in the manual,
- ▶ Operating personnel are not suitably qualified,
- ▶ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

- ▶ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.
- ▶ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

Function description

Basic function

The safety light curtain consists of a transmitter and a receiver.

Their shape and design

- ▶ protect the transmitter and receiver from external damage
- ▶ protect the safety light grid from malfunctions caused by vibration (see [Technical details, environmental data section](#)  43).

The protected area is covered by infrared light beams, which are emitted from the transmitter to the receiver. The protected field thus produced is able to detect an opaque object.

The control and monitoring of the transmitted and received infrared rays is performed by microprocessors.

The output signal switching devices (OSSDs) switch to the OFF state when one of the following conditions is met:

- ▶ One or more light beams are interrupted by an object, a body part, or an opaque object that is at least as large as the resolution covered by the safety light curtain (170 mm or 300 mm, see [Technical details](#)  43),
- ▶ A fault is detected in the safety light curtain,
- ▶ Stray light is detected.

If a fault occurs, the OSSDs remain in the OFF state. The state can be returned to the ON state only after a successful [restart](#)  38] of the safety light grid.

The safety light grid in the PSEN opII4B Series offers the following functions:

- ▶ Automatic start
- ▶ automatic restart
- ▶ Operation of 2 safety light grids that are parallel to one another and are installed with the same orientation (noting the information in [ambient conditions](#)  18] and [minimum separation of parallel, aligned safety light grids](#)  18])

Transmitters and receivers are each electrically connected with a cable with an M12 connector that is assigned to the transmitter and receiver on the LED side.

The transmitter and receiver are optically synchronised and therefore need not be directly connected to each other.

Information about the operating status of the safety light curtain and any error state is provided by means of LEDs.

The indicators are described in the section: [Status information](#)  36].

Automatic start and restart

Automatic start

When the safety light curtain is switched on the safety light curtain starts automatically and the OSSDs switch to the ON state under the following conditions:

- ▶ Both OSSDs are wired correctly **and**
- ▶ No fault has occurred **and**
- ▶ The protected field is clear.

If the protected field is violated, the OSSDs switch to the OFF state.

Automatic restart

The OSSDs automatically switch to the ON state during operation under the following conditions:

- ▶ both OSSDs are wired correctly **and**
- ▶ no error has occurred **and**
- ▶ the protected field is clear **and**
- ▶ at least 80 ms have elapsed since the switch to the OFF state.

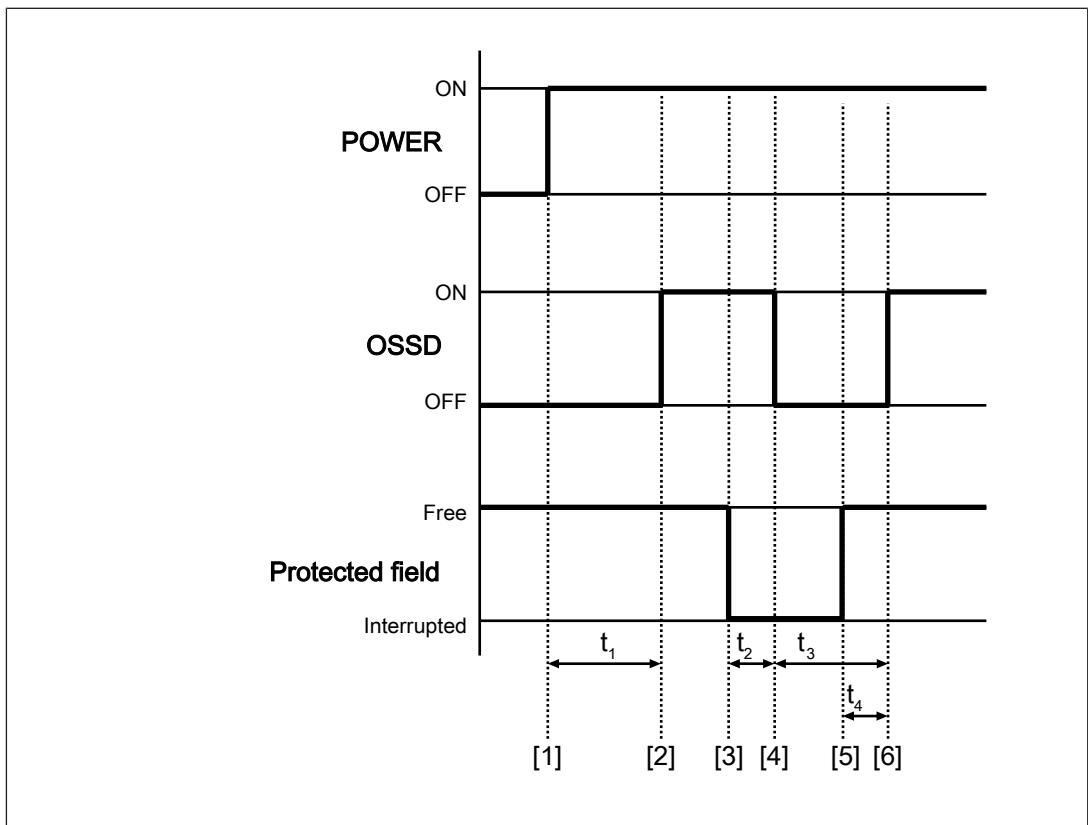

Fig.: Automatic start and restart timing diagram

Legend

- [1] Safety light curtain is switched on
- [2] Check completed successfully, OSSDs in the ON state
- [3] Protected field broken
- [4] OSSDs in the OFF state

- [5] Protected field is clear again, fault check is restarted
- [6] OSSDs in the ON state
- t_1 Check is begun to determine whether the protected field is clear and whether there are faults
- t_2 Response time (coded/uncoded), until OSSDs switch to the OFF state (see [Technical details \[43\]](#))
- t_3 Minimum time that the OSSDs remain in the OFF state: 80 ms
- t_4 Time between the protected field being enabled and the OSSDs changing to the ON state
 - ▶ Without beam coding
 - If a synchronisation beam pair is interrupted: Response time (without beam coding) + 10 ms
 - If both synchronisation beam pairs (first and last light beam pair) are interrupted: max. 1 s
 - ▶ With beam coding
 - If a synchronisation beam pair is interrupted: Response time (with beam coding) + 10 ms
 - If both synchronisation beam pairs (first and last light beam pair) are interrupted: max. 2 s

Operation of two safety light curtains with the same alignment

Two adjacent safety light curtains with the same alignment can be operated, without the two safety light curtains influencing each other (see [Minimum distance between parallel, aligned safety light curtains \[18\]](#)).

For the correct function of the two safety light curtains, a beam coding of the safety light curtains is required. The beam coding is performed via the connection of the safety light curtain to the supply voltage (see [Connector pin assignment \[29\]](#)).

Project configuration

Maintaining the safety distance

The minimum distance of the safety light curtain to the dangerous machine component should be such that the operator cannot reach the danger zone until the movement of the dangerous machine part has stopped.

In accordance with the standard

- ▶ EN ISO 13855

this distance depends on three factors:

- ▶ Response time of the safety light curtain

Time between the beams being interrupted and the OSSDs changing to the OFF state (see [Technical details \[43\]](#))

When beam coding is used, the response time is increased (see Technical Details)

▶ Machine's stopping time

Time between the OSSDs changing to the OFF state and the hazardous machine movement stopping (including the reaction time of the connected relay)

▶ Approach speed

The speed with which the object to be detected is nearing the danger zone in mm/s

NOTICE

Increase in safety light curtain's response time

When beam coding is used, the response time is increased (see Technical Details)

The general formula for calculating the minimum distance in accordance with EN ISO 13855 is as follows:

$$S = K * (t_1 + t_2) + C$$

S	Minimum distance in mm, measured from the start of the protected field to the danger source
K	Approach speed with which the object to be detected is nearing the danger zone in mm/s K = 1600 mm/s
t ₁	Response time of the safety light curtain in seconds Time it takes for the signal at the OSSD output on the safety light curtain to change once a protected field has been violated (see Technical details [43])
t ₂	Machine's stopping time in seconds The time required for the machine to stop after the signal at the OSSD output changes
C	Additional distance of 850 mm for safety light curtains with body protection

Resolution

The safety light grids may only be used for protected fields in which the detection capability (see [Technical details \[43\]](#)) is sufficient.

Protected field perimeters

During planning, ensure sufficient protected field height to secure the danger zone.

The protected field perimeter is defined in [dimensions \[42\]](#).

Ambient conditions

- ▶ Install the safety light grids in an environment that corresponds to the environmental data provided in the [Technical details \[43\]](#).
- ▶ Do not install the safety light grid near particularly intense and/or flashing light sources; this applies to the receiver in particular.
- ▶ The transmitter of one safety light curtain must not interfere with the receiver of another safety light curtain .

- ▶ The transmitters and receivers of two different safety light grids must not be synchronised.
- ▶ Avoid strong electromagnetic interference when operating the safety light grid.
- ▶ When operating the safety light grid, avoid the development of smoke, mist, or dust that would reduce the grid's operating range.

Distance from reflective surfaces

If there are reflective surfaces near the beams emitted from the safety light curtain (whether from above, below, or from the side), passive reflections can cause an object within the protected field to remain undetected (see diagrams).

As a result, the safety light grid must be installed at a minimum distance from reflective surfaces.

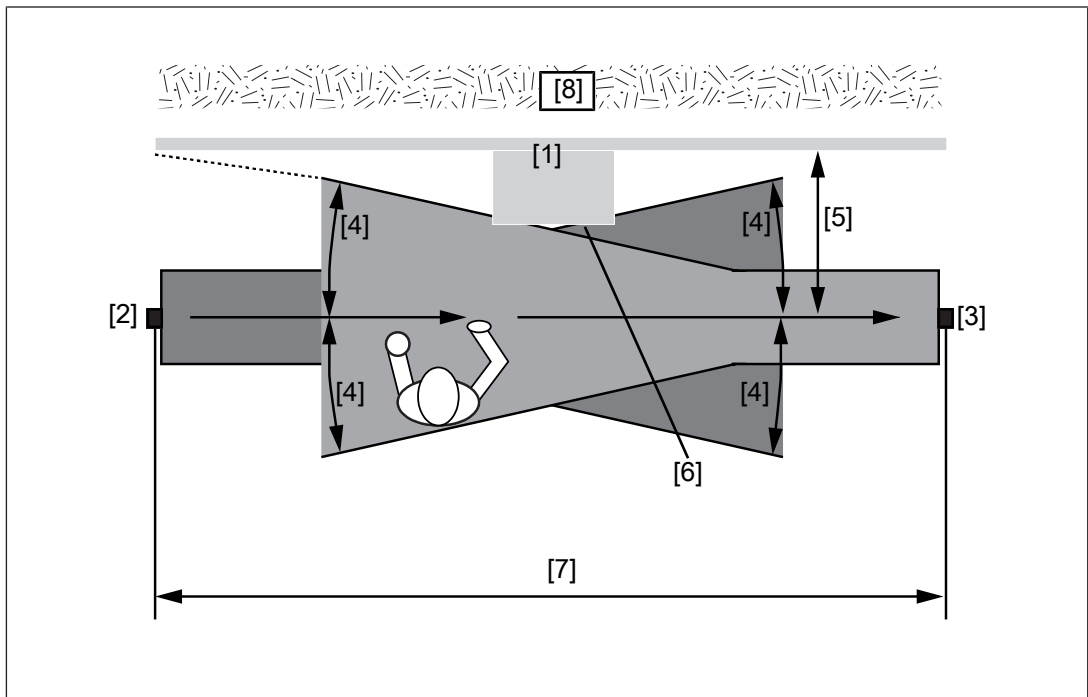

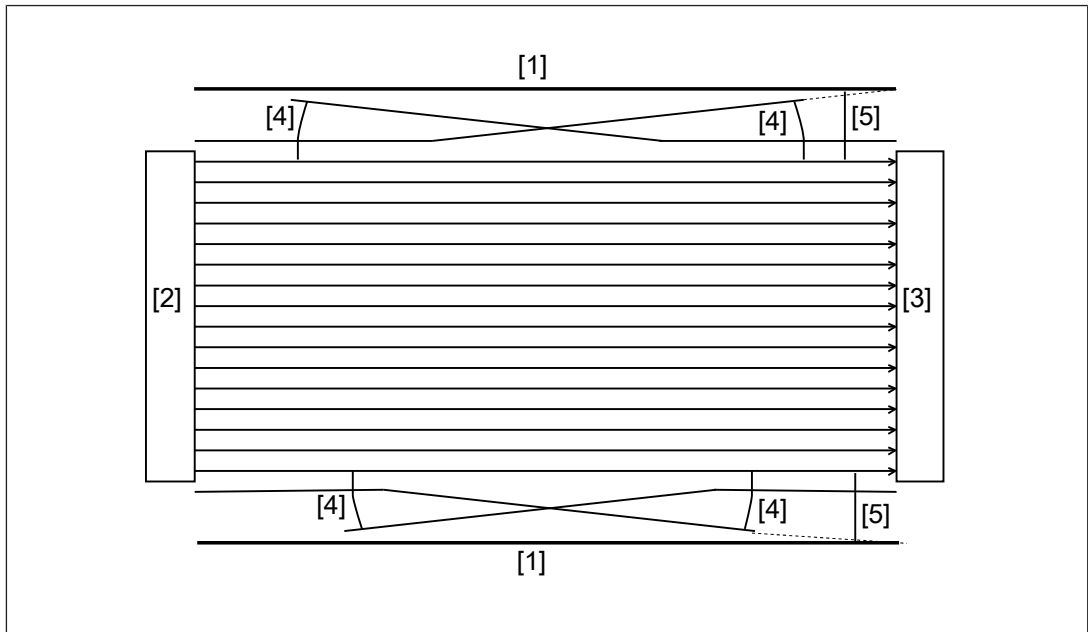

Fig.: Interference with the function of the safety light curtain due to reflective surfaces – top view

Legend

- [1] Reflective surface
- [2] Transmitter
- [3] Receiver
- [4] Half of the opening angle (= α) (see [Technical details \[43\]](#)) of the light beams emitted by the safety light curtain
- [5] Minimum distance D between the safety light curtain and the reflective surface
- [6] Passive reflections on the surface
- [7] Distance between transmitter and receiver (working distance)
- [8] Hazardous area

The minimum distance D depends on two factors:

- ▶ Working distance between transmitter and receiver
- ▶ the maximum [opening angle \[43\]](#) of the light beams emitted by the safety light curtain at:
 $5^\circ = \pm 2.5^\circ$ in relation to the optical axis

Minimum distance of the safety light curtain to reflective surfaces

The formula for calculating the minimum distance D is:

- ▶ For a working distance of less than 3 m: $D = 0.131 \text{ m}$
- ▶ For a working distance of 3 m or more: $D = \text{working distance in m} \times \tan \alpha$

Fig.: Relationship between minimum distance and working distance

Legend

[1] Minimum distance D

Minimum distance between parallel, aligned safety light curtains

Please note:

Safety light grids that are installed so as to be parallel and aligned must have a minimum spacing corresponding to the information in [distance to reflective surfaces \[16\]](#).

Without beam coding

Legend

- T_{x1} Transmitter from the first safety light curtain
- R_{x1} Receiver from the first safety light curtain
- T_{x2} Transmitter from the second safety light curtain

R_{x2} Receiver from the second safety light curtain

[1] Minimum distance D_{LV} between two safety light curtains that are aligned

- ▶ Working distance $A < 3$ m: $D_{LV} = 2 \times D = 0.262$ m
- ▶ Working distance $A \geq 3$ m: $D_{LV} = 2 \times A \times \tan 2.5^\circ$

[2] Working distance A

[3] Minimum distance D, dependent on the working distance

[4] Working distance (≤ 3 m) with constant minimum distance $D = 0.262$ m

[1] Connecting the safety light curtain with an opaque surface to shield the safety light curtain on the right

[2] Connection of the safety light curtain aligned with [1]

[3] Connection of safety light curtain without shielding, but in the orientation opposite to [2]

[4] Connection of the safety light curtain with beam code A-coded

[5] Connection of the safety light curtain with beam code B-coded

► Beam coding of two safety light curtains

- If two safety light codes are to be used in parallel, a beam coding of the safety light curtains is recommended. When connecting the safety light curtain to the supply voltage, the safety light curtains are connected to different pins. This guarantees a differentiation of the beams, and transmitter and receiver can not interfere with each other.

If several adjacent safety light curtains need to be installed, steps must be taken to ensure that the transmitter on one safety light curtain does not interfere with the receiver on another safety light curtain.

An arrangement of the adjacent safety light curtains can be achieved by various methods.

CAUTION!

Extension of the response time of the safety light curtain when using the beam coding

When calculating the safety distance, remember the extended response time (see [Technical details \[43\]](#)) with beam coding.

Changing from uncoded to coded operation is a change of the safety light curtain and it requires a new risk assessment and hazard analysis.

- Perform a new risk assessment and hazard analysis and determine the new [minimum distance \[14\]](#) to the hazardous area with the extended response time.

Use of deviating mirrors

Danger zones with different but adjacent access sides can be monitored using a safety light curtain in conjunction with [deviating mirrors \[54\]](#).

The diagram below shows an example solution for monitoring three different access sides using two deviating mirrors. The deviating mirrors must be positioned at an angle of 45° to the beams from the safety light curtain.

When using deviating mirrors, please note:

- ▶ Even a minor angular displacement of the mirror can lead to misalignment, adversely affecting or preventing the function of the safety light curtain. Use the laser pointer PSEN opII for alignment (see [Order reference for accessories \[54\]](#)).
- ▶ The minimum safety distance to the danger zone must be maintained for all sections of the light path.
- ▶ The use of a single deviating mirror reduces the operating range (the degree of reduction is specified in the technical details of the used mirrors). This percentage increases when an additional deviating mirror is used. Please consider this reduction when positioning the safety light curtain.
- ▶ You should not use more than two mirrors per device.
- ▶ Any dust or dirt on the mirror's reflective surface will drastically reduce the operating range.

Fig.: Example for using deviating mirrors

Legend

- [1] Transmitter
- [2] Receiver
- [3] Hazardous area
- [4] Deviating mirror
- [5] Minimum safety distance
- [6] Distance between the deviating mirrors
- [7] Distance from transmitter to deviating mirror
- [8] Distance from deviating mirror to receiver

Installation and alignment

Please note:

- ▶ The optical surfaces of the transmitter and receiver must be parallel to each other and oriented opposite to each other.
- ▶ The connection sides of the transmitter and receiver must be on the same side and at the same height (see diagram).

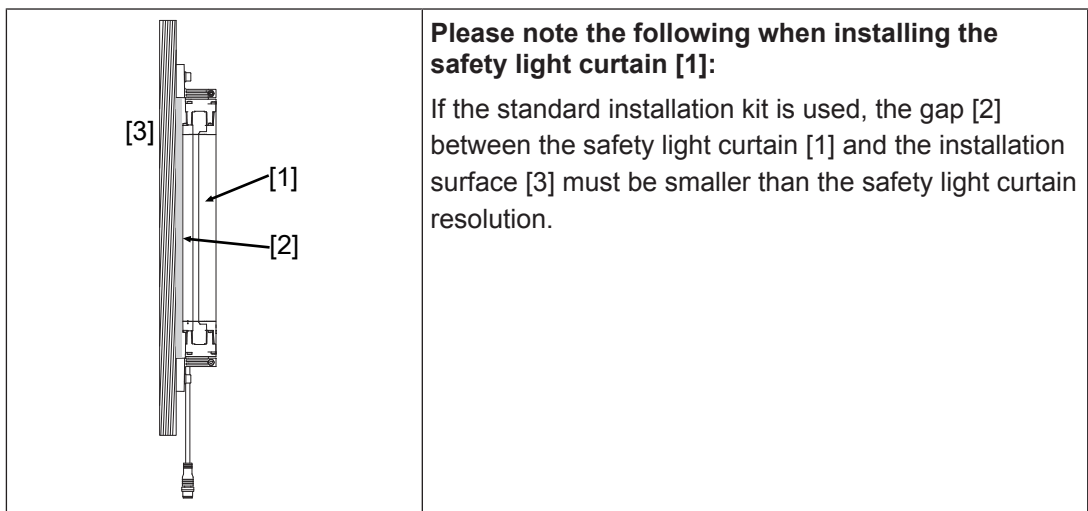

Legend

- [1] Transmitter
- [2] Receiver
- [3] Connection cable

- ▶ The distance between the transmitter and receiver must be within the operating range of the safety light curtain used (see [Technical details \[43\]](#)).
- ▶ The installation surface must be at least as wide as the standard installation kit
- ▶ The installation surface may have a flatness imperfection of no more than 1.5 mm.

Attach the safety light curtain to the mounting surface

Prepare the installation surface.

Clean the installation surface. The installation surface must be free of dust and grease.

Mount the holder on the end cap on the connection side of the safety light curtain

Feed the cable [2] through the opening in the holder.
Ensure that the holder is flush with the end cap (see diagram).

Attach the holder to the end cap with the tightening screws (Torx T10) included in delivery.

[1] Torque setting 0,7 Nm

Mount the holder on the end cap on the wiring side of the safety light curtain

Ensure that the holder is flush with the end cap (see diagram).

Attach the holder to the end cap with the tightening screws included in delivery.

[1] Torque setting 0,7 Nm

Mount the flexible bracket (swivel mount) on the holder on both the connection and wiring sides of the safety light curtain.

Push the flexible bracket over the holder. The flexible bracket must lie flush with the holder.

Fix the flexible bracket in place with the clamping screw [1] and the nut [2].

The screw connection is only tightened to the final torque when the assembly is orientated.

Uneven installation surfaces can be compensated for with the standard installation kit to a limited extent only.

Please note the following when installing the safety light curtain [1]:

- ▶ The angle [4] of the flexible bracket [3] on the holder [2] may not be more than 2°.
- ▶ The flexible bracket [3] must be seated on one side of the holder [2].

Bore holes in the installation surface (two M6 screw boreholes per flexible bracket) for mounting the flexible brackets for the transmitter and receiver.

Orientation

General guidelines

For the safety light curtain to function properly, the transmitter and receiver must be aligned correctly.

The safety light curtains transmitter and receiver can be oriented with or without a laser orientation aid.

- ▶ Orientation with a laser orientation aid: the safety light curtain need not be switched on
- ▶ Orientation without a laser orientation aid: the safety light curtain must already be wired (see chapter entitled "Wiring" in the safety curtain's operating manual) and must be switched on

For alignment Pilz recommends the PSEN opII Laserpointer (see [Order references for accessories \[54\]](#)) or another laser alignment aid.

Fig.: Transmitter/receiver modification directions during orientation

Legend

- [1] Vertical: by vertical shifting of position in the elongated holes in the top and bottom flexible brackets
- [2] Horizontal: by moving up and down in the slots in a horizontal direction
- [3] The axis orientation can be changed by rotating the flexible bracket right or left

Pilz recommends that modifications to the orientation of the transmitter/receiver be made in the following sequence:

1. Vertical modification
2. Horizontal modification
3. Axis orientation modification

Safety light curtain alignment

Optimal orientation with the use of a laser orientation aid

The optimal orientation has been achieved with a laser orientation aid if the following conditions are met:

- ▶ The beam of the laser orientation aid attached to the transmitter strikes the receiver **and**
- ▶ the beam of the laser orientation aid attached to the receiver strikes the transmitter

Perform the orientation as described in the laser orientation aid's operating manual.

WARNING!

The laser beam of the laser orientation aid is harmful to the human eye

The human eye may be injured.

- Ensure that the laser beam is not directed at a human eye.

Optimal orientation without a laser orientation aid

1. Determine the maximum rotation range in when the protected field LED (OSSD status) illuminates green.
Rotate the transmitter and receiver until the protected field LED (OSSD status) changes from red to green.
2. Rotate the transmitter to the centre of the rotation range in which the protected field LED illuminates green.
3. Rotate the receiver to the centre of the rotation range in which the protected field LED illuminates green.

After the safety light curtain's transmitter and receiver have been orientated, the clamping screws and nuts and the mounting screws must be tightened to their final torques.

- ▶ Tighten the clamping screws [1] and the nuts [2] on the flexible bracket to a torque of 1,1 Nm.
- ▶ Tighten the brackets' mounting screws [3] on the installation surface to a torque of 3 Nm.

Legend

- [1] Clamping screw
- [2] Nut
- [3] Mounting screws

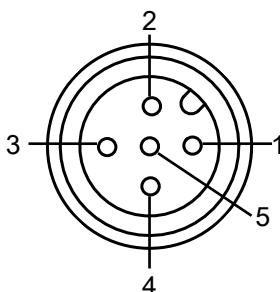

Wiring

General guidelines

- ▶ Do not lay the connecting cable near or in contact with cables that carry high or highly volatile currents.
- ▶ Use separate cables to connect the wires to the OSSDs on different safety light curtains or safety switches.
- ▶ Do **not** connect contacts OSSD1 and OSSD2 in series or in parallel.
- ▶ For supply voltage, use only PELV/SELV power supplies that have a voltage buffer in accordance with EN 60204-1.
- ▶ The power supply must be able to bridge a short (20 ms) supply voltage failure in accordance with EN 61496-1.
- ▶ SELV power supply
 - Do **not** connect the safety light curtain housing to the earth conductor or the protective conductor. The transmitters and receivers must be electrically isolated from the machine/system. The use of the flexible bracket (swivel mount) provides this electrical isolation.
- ▶ Connection to PDP67
 - Use the order reference of the cable listed (see [Accessories, connection to PDP67](#) [📖 55])
- ▶ Connection to other evaluation devices
 - Use the order reference of the cable listed (see [Accessories, connection to other evaluation devices](#) [📖 55])
 - The clamps for connection to the evaluation device must be kept in a locked control cabinet. This prevents unauthorised modifications.
- ▶ Ensure compliance with permissible cable bending radii (see [Technical details](#) [📖 43]).

Connector pin assignment

Transmitter and receiver electrical connections are made with M12 connectors. These connectors are located on the bottom of the transmitters and receivers.

5-pin connector on the transmitter	PIN	Assignment	Cable colour
	1	uncoded: +24 VDC A-coded: +24 V DC B-coded: 0 V DC	brown
	2	Reserved	white
	3	0 VDC	blue
	4	Reserved	black
	5	uncoded: +24 VDC A-coded: 0 V DC B-coded: +24 V DC	grey

5-pin connector on the receiver	PIN	Assignment	Cable colour
	1	uncoded: +24 VDC	brown
		A-coded: +24 V DC	
		B-coded: 0 V DC	
	2	OSSD 1	white
	3	0 VDC	blue
	4	OSSD 2	black
	5	uncoded: +24 VDC	grey
		A-coded: 0 V DC	
		B-coded: +24 V DC	

▶ Ensure that the wiring has been performed according to the truth table.

Receiver/transmitter	Pin	uncoded	A-coded	B-coded
Receiver	1	24 V	24 V	0 V
	3	0 V	0 V	0 V
	5	24 V	0 V	24 V
Transmitter	1	24 V	24 V	0 V
	3	0 V	0 V	0 V
	5	24 V	0 V	24 V

Truth table for checking the pin assignment

Earthing the safety light curtain

Please note:

- ▶ Connect the 0 V connections on all the 24 V power supplies and earth the 0 V mains at a single point, or ensure that measures are in place to monitor for earth faults.
- ▶ The connection of the 0 V supply to the central earth bar or earth fault monitor must be in accordance with relevant national regulations (such as EN 60204-1, NFPA 79:17-7, NEC: Article 250).
- ▶ Connections should be protected from corrosion.
- ▶ Flexible earthing straps should be used on moving earth parts (e.g. machine parts, gates). Ensure these earthing straps are as short and wide as possible.
- ▶ For PELV power supplies
Connect the power supply circuit to the earth conductor.

Commissioning

System connection

Make sure that the selected evaluation device has the following properties:

- ▶ 2-channel with feasibility monitoring
- ▶ OSSD signals are evaluated
- ▶ A test pulse lasting no longer than 300 µs is bridged

Suitable Pilz evaluation devices are, for example:

- ▶ PNOZelog for monitoring safety light curtains
- ▶ PNOZsigma for monitoring safety light curtains
- ▶ PNOZ X for monitoring safety light curtains
- ▶ PDP67 ION and PDP67 ION HP
 - Connect the OSSDs on the receiver to pins 2 and 4 on the PDP67 ION.
 - Ensure that pins 1 and 5 on the PDP67 ION are used as an ST output.
 - Make the connection using one of the cables listed in the order reference (see [Order reference for accessories, connection to PDP67 \[📖 55\]](#)).
- ▶ PNOZmulti for safety light curtain monitoring
Configure the safety light curtain in the PNOZmulti Configurator with switch type 3.
- ▶ Automation system PSS 4000 for monitoring safety light curtains with the FS_LightCurtain function block

The correct connection to the respective evaluation device is described in the operating manual for the evaluation device. Connect the evaluation device according to the specifications in the selected evaluation device's operating manual.

Fig.: Dual-channel connection of an uncoded safety light curtain at the input circuit of an evaluation device

CAUTION!

Extension of the response time of the safety light curtain when using the beam coding

When calculating the safety distance, remember the extended response time (see [Technical details \[43\]](#)) with beam coding.

Changing from uncoded to coded operation is a change of the safety light curtain and it requires a new risk assessment and hazard analysis.

- Perform a new risk assessment and hazard analysis and determine the new [minimum distance \[14\]](#) to the hazardous area with the extended response time.

**CAUTION!**

When considering the examples, please note that Pilz accepts no responsibility for the specific application. In particular, they may not be used without testing and approval.

The system manufacturer is responsible for creating appropriate safety concepts for the overall plant and for connection to the programmable safety system (including the user program). The applicable standards and regulations must be considered and observed.

Checking the safety light curtain

Once the safety light grid has been installed and aligned, final inspections must be carried out before it can be put into service.

**INFORMATION**

This inspection may only be carried out by qualified personnel.

Check the safety function of the safety light curtain**Procedure**

In each of the indicated checks, the OSSDs must switch to the OFF state.

The OSSD status LED  on the left side of the receiver must illuminate red.

1. Interrupt the protected field (see diagram):
 - In the vicinity of the transmitter
 - In the vicinity of the receiver
 - In the centre of the protected field
2. Interrupt the protected field at a position that is considered critical as a result of the safety assessment

Legend

[1] Object that interrupts the protected field

Check ambient conditions and installation

- ▶ Correct alignment and attachment
Check the seating of the mounting screws by applying pressure to the edges of the safety light curtain. Neither the device status LED  of the transmitter nor that of the receiver may illuminate.
- ▶ Safety distance
The safety distance must comply with the requirements in [Maintaining the safety distance](#)  14].
- ▶ Circumventing the protected field
The danger zone must be secured so that it is impossible to access by circumventing the protected field.
- ▶ Protected field perimeters
The protected field perimeters (see [Dimensions](#)  42]) must completely secure the hazardous area, making it inaccessible.

- ▶ Response and stopping times must fulfil the requirements in Maintaining the safety distance
 Ensure that the safety light curtain's response time and the machine's stopping time fulfil the requirements in Maintaining the safety distance.
- ▶ Check beam coding
 Is beam coding displayed correctly at the receiver (see [Checking of safety light curtains with beam coding](#) [📖 39])?
- ▶ No intense or flashing light sources in the vicinity
 There may be no especially intense or flashing light sources in the vicinity of the safety light grid.
- ▶ Ambient conditions
 Please observe the [environmental conditions](#) [📖 15].
- ▶ Use of deviating mirrors
 Check all areas that are bounded by a deviating mirror.

Operation

Display elements

The safety light curtain's operating status is indicated with LEDs in the end caps of the connection side of the receiver and on the transmitter.

			
	Device status		▶ Reception quality: – III: Best quality – I: Worst quality ▶ Status of the beam coding when the protected field is interrupted
	OSSD status (protected field LED)		

LED indicator on the receiver

	Device status		<ul style="list-style-type: none"> ▶ Status of the beam coding during normal operation
	<ul style="list-style-type: none"> ▶ Light beam status ▶ Status of the beam coding during normal operation 		<ul style="list-style-type: none"> ▶ Light beam error information

LED indicators on the transmitter

INFORMATION

The reception quality also depends on the distance.

If the distance between sender and receiver is near the max. operating range, it is not possible to achieve a very high reception quality even with optimum alignment.

However, the safety light curtain can be operated with low reception quality when the alignment is performed as described in [Safety light curtain alignment \[27\]](#).

Status information

Legend

- LED on
- LED flashes
- LED off

Displays on the receiver

					Meaning
		●	●	●	Ready for operation
Green	Green	The current reception quality status is indicated			
					Safety light curtain is started. The safety light curtain is not aligned.
Green	Red	Green	Green	Green	
		●	●	●	Protected field is interrupted, Uncoded
Green	Red				

					Meaning
 Green	 Red	 Green			Protected field is interrupted, A-coded
 Green	 Red		 Green		Protected field is interrupted, B-coded
 Red	 Red				OSSD fault Restart [38] the safety light curtain.
 Red	 Red	The current coding status is indicated			A fault has occurred. Restart [38] the safety light curtain.
					
 Green	 Green	 Green	 Green	 Green	Stray light warning Warns of the OSSDs' change to the OFF state due to the presence of stray light.
 Green	 Red	 Green	 Green	 Green	Stray light fault OSSDs have changed to the OFF state due to the presence of stray light. 1. Use the beam coding of the safety light curtain. 2. Install an opaque surface on the side facing the stray light source or reverse the positions of the safety light curtain's transmitter and receiver. 3. Restart [38] the safety light curtain.
 Red	 Red	 Green			Overtemperature; OSSD in the OFF state 1. Ensure that the ambient temperature corresponds to the information in the Technical details [43] . 2. Restart [38] the safety light curtain.

					Meaning
 Red	 Red		 Green		<p>Undervoltage; OSSD in the OFF state</p> <ol style="list-style-type: none"> 1. Ensure that the supply voltage corresponds to the information in the Technical details [43]. 2. Restart [38] the safety light curtain.

Indicators on the transmitter

				Meaning
 green	 red	 green	 green	Safety light curtain is started
 green	 green			Safety light curtain in operation Transmitter sends uncoded
 green	 green	 green		Safety light curtain in operation Transmitter sends A-coded
 green	 green		 green	Safety light curtain in operation Transmitter sends B-coded
 red	 red			An error has occurred. Perform a safety light curtain restart [38] .
 red	 red	 green		<p>Overtemperature; OSSD in the OFF state</p> <ol style="list-style-type: none"> 1. Ensure that the ambient temperature corresponds to the information in the Technical details [43]. 2. Perform a safety light curtain restart [38].
 red	 red		 green	<p>Undervoltage; OSSD in the OFF state</p> <ol style="list-style-type: none"> 1. Ensure that the supply voltage corresponds to the information in the Technical details [43]. 2. Perform a safety light curtain restart [38].

Safety light grid restart

- ⇒ Disconnect the supply voltage from the safety light curtain and reconnect it. The [automatic start \[13\]](#) begins.

Malfunction

DANGER!

Loss of safety function due to a malfunction of the safety light curtain

A safety light grid malfunction may lead to serious injury or death.

If there is a safety light curtain malfunction, immediately discontinue operation of the system components whose hazardous area the grid secures.

Regular checks and maintenance

Checks

Regular checks can bring to light changes to the plant/machine, safeguards and ambient conditions.

Regular check

Pilz recommends that the safety light curtain be checked every six months.

- ▶ Check the safety light curtain's front panel.
 - Scratched front panel: Replace the safety light curtain.
 - Dirty front panel: [Clean the front panel](#)  41].

In a particularly dirty environment, front panel cleanliness should be checked more frequently.
- ▶ Check the tightness of the safety light curtain's front panel.

All screws must be tightened to the torque specified in the [Technical details](#)  43].
- ▶ Check the safety function of the safety light curtain (see [Check the safety function of the safety light curtain](#)  33]).

Checking of safety light curtains with beam coding

When switching on the safety light curtains, the correct function of the coding must be checked.

INFORMATION

This inspection may only be carried out by qualified personnel.

The following LEDs must light after switching on:

Receiver

Status					
Ready for operation	 green	 green			
The current reception quality status is indicated.					

Transmitter

Status				
Safety light curtain in operation Transmitter sends uncoded	 green	 green		
Safety light curtain in operation Transmitter sends A-coded	 green	 green	 green	
Safety light curtain in operation Transmitter sends B-coded	 green	 green		 green

Check whether the coding corresponds to the specifications in [Installation of several adjacent safety light curtains](#) [20].

Check the [pin assignment](#) [29], when other displays can be seen at the safety light curtain.

Interrupt the protected field. The following LED must light at the receiver:

					Meaning
 green	 red	 green			Protected field is interrupted, A-coded
 green	 red		 green		Protected field is interrupted, B-coded

Check after plant/machine modification

Check the safety light curtain each time the plant/machine is modified.

The following measures should also be regarded as a modification:

- ▶ The exchange of the safety light curtain
- ▶ The exchange of components of the safety light curtain
- ▶ A changed connection of the safety light curtain (change from uncoded connection to coded connection).

You **must** comply with the requirements of the applicable national regulations.

INFORMATION

This inspection may only be carried out by qualified personnel.

The Appendix contains a [Checklist](#)  [60](#) which should help you perform the safety check.

Maintenance

Other than cleaning the lens covers, the safety light curtains requires no other form of maintenance.

CAUTION!

Improper cleaning agents can damage the safety light curtain and lead to malfunctions.

Moist cotton cloths should be used for cleaning.

Avoid using

- ▶ Alcohol,
- ▶ Solvents,
- ▶ Cloths made of wool,
- ▶ Cloths made of synthetic material.

Clean the lens covers during the regular [check of the safety light curtain](#)  [39](#).

Dimensions

Technical details Order no. 632133-632135

General	632133	632134	632135
Certifications	CE, EAC (Eurasian), TÜV, cULus Listed	CE, EAC (Eurasian), TÜV, cULus Listed	CE, EAC (Eurasian), TÜV, cULus Listed
ESPE type	4	4	4
Sensor's mode of operation	Infrared	Infrared	Infrared
Height of protected field	900 mm	1.200 mm	1.500 mm
Resolution			
Operating range	10 - 55 m	10 - 55 m	10 - 55 m
Detection capability	300 mm	300 mm	300 mm
Electrical data	632133	632134	632135
Supply voltage			
Voltage	24 V	24 V	24 V
Kind	DC	DC	DC
Voltage tolerance	-25 %/+20 %	-25 %/+20 %	-25 %/+20 %
Residual ripple DC	5 %	5 %	5 %
Max. power consumption OSSD in the OFF state	2,5 W	2,5 W	2,5 W
Max. voltage OSSD in the OFF state	0,2 V	0,2 V	0,2 V
Max. power consumption transmitter	1,5 W	1,5 W	1,5 W
Max. inductive load per output	1 H	1 H	1 H
Beam coding	yes	yes	yes
Optical data	632133	632134	632135
Opening angle	-2,5 - 2,5 deg	-2,5 - 2,5 deg	-2,5 - 2,5 deg
Used wavelength range	850 nm	850 nm	850 nm
Semiconductor outputs	632133	632134	632135
OSSD safety outputs	2	2	2
Switching current per output	100 mA	100 mA	100 mA
Residual current at "0" signal	0,1 mA	0,1 mA	0,1 mA
Voltage drop at OSSDs	1,5 V	1,5 V	1,5 V
Max. line capacitance at the outputs without load	40 nF	40 nF	40 nF
Times	632133	632134	632135
Test pulse duration, safety outputs	300 µs	300 µs	300 µs
Supply interruption before de-energisation	600 µs	600 µs	600 µs
Response time t1	5,2 ms	5,2 ms	5,4 ms
Response time (with beam coding)	11,7 ms	11,7 ms	11,7 ms

Environmental data	632133	632134	632135
Ambient temperature			
Temperature range	-10 - 60 °C	-10 - 60 °C	-10 - 60 °C
Storage temperature			
Temperature range	-25 - 70 °C	-25 - 70 °C	-25 - 70 °C
Climatic suitability			
Humidity	95 % r. h. at 50 °C	95 % r. h. at 50 °C	95 % r. h. at 50 °C
Condensation during operation	Not permitted	Not permitted	Not permitted
EMC	EN 61496-1	EN 61496-1	EN 61496-1
Vibration			
In accordance with the standard	EN 60068-2-6	EN 60068-2-6	EN 60068-2-6
Frequency	10 - 150 Hz	10 - 150 Hz	10 - 150 Hz
Amplitude	0,75 mm	0,75 mm	0,75 mm
Shock stress			
In accordance with the standard	EN 60068-2-27	EN 60068-2-27	EN 60068-2-27
Number of shocks	1000	1000	1000
Acceleration	10g	10g	10g
Duration	16 ms	16 ms	16 ms
Bracket	Swivel-Mount	Swivel-Mount	Swivel-Mount
In accordance with the standard	EN 60068-2-27	EN 60068-2-27	EN 60068-2-27
Number of shocks	3	3	3
Acceleration	50g	50g	50g
Duration	11 ms	11 ms	11 ms
Bracket	Adv Bracket Kit	Adv Bracket Kit	Adv Bracket Kit
Protection type			
Housing	IP65	IP65	IP65
Mechanical data	632133	632134	632135
Min. bending radius (fixed permanently) K1	5 x Ø	5 x Ø	5 x Ø
Min. bending radius (moving) K1	10 x Ø	10 x Ø	10 x Ø
Connection type			
Receiver	M12, 5-pin male connector	M12, 5-pin male connector	M12, 5-pin male connector
Transmitter	M12, 5-pin male connector	M12, 5-pin male connector	M12, 5-pin male connector
Max. cable length	50 m	50 m	50 m
Material			
Housing	Aluminium	Aluminium	Aluminium
End caps	Zn	Zn	Zn
Front screen	PC	PC	PC

Mechanical data	632133	632134	632135
Max. torque setting			
Clamping screw	1,1 Nm	1,1 Nm	1,1 Nm
Installation screw	3 Nm	3 Nm	3 Nm
Fixing screw	0,7 Nm	0,7 Nm	0,7 Nm
Dimensions			
Height	904 mm	1.204 mm	1.504 mm
Width	35 mm	35 mm	35 mm
Depth	40 mm	40 mm	40 mm
Weight	2.618 g	3.420 g	4.221 g

Where standards are undated, the 2015-12 latest editions shall apply.

Classification according to ZVEI, CB24I

The following tables describe the classes and specific values of the product interface and the classes of interfaces compatible with it. The classification is described in the ZVEI position paper "Classification of Binary 24 V Interfaces - Functional Safety aspects covered by dynamic testing".

Safe 1-pole HL outputs

Source		Drain	
Safety switch	C2	Evaluation device	C1, C2

Source parameters	Min.	Typ.	Max.
Test impulse duration	-	-	300 µs
Rated current	-	-	0,1 A
Capacitive load	-	-	40 nF

Safety characteristic data

NOTICE

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015	EN ISO 13849-1: 2015	EN 62061 SIL CL	EN 62061 PFH _D [1/h]	IEC 61511 SIL	IEC 61511 PFD	EN ISO 13849-1: 2015 T _M [year]
	PL	Category					
2-ch. OSSD	PL e	Cat. 4	SIL CL 3	1,50E-08	-	5,00E-05	20

Explanatory notes for the safety-related characteristic data:

- ▶ The SIL CL value in accordance with EN 62061 corresponds to the SIL value in accordance with EN 61508.
- ▶ T_M is the maximum mission time in accordance with EN ISO 13849-1. The value also applies as the retest interval in accordance with EN 61508-6 and IEC 61511 and as the proof test interval and mission time in accordance with EN 62061.

All the units used within a safety function must be considered when calculating the safety characteristic data.

INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PASCAL software tool to calculate the safety function's SIL/PL values.

Order reference

Order reference for safety light curtains

Product type	Features	Order no.
PSEN opII4B-s-170-045	Safety light curtain for body protection, Resolution 170 mm Protected field height 450 mm	632 120

PSEN op cable axial M12 5-pole 50m	50 m	M12, 5-pin female connector, straight			630 364
PSEN op cable angle M12 5-pole 3m	3 m	M12, 5-pin female connector, angled			630 347
PSEN op cable angle M12 5-pole 5m	5 m	M12, 5-pin female connector, angled			630 348
PSEN op cable angle M12 5-pole 10m	10 m	M12, 5-pin female connector, angled			630 349
PSEN op cable angle M12 5-pole 30m	30 m	M12, 5-pin female connector, angled			630 350
PSEN op cable angle M12 5-pole 50m	50 m	M12, 5-pin female connector, angled			630 365

Mirror column set

consisting of

- ▶ PSEN opII mirror column-xxx,
- ▶ PSEN opII adjustable base unit and
- ▶ Floor anchor PSEN screw set mirror column

Product type	Features	Height	Order no.
PSEN opII mirror column-060 Set	with PSEN opII mirror column-060	60 cm	632 007
PSEN opII mirror column-090 Set	with PSEN opII mirror column-090	90 cm	632 008
PSEN opII mirror column-120 Set	with PSEN opII mirror column-120	120 cm	632 009
PSEN opII mirror column-165 Set	with PSEN opII mirror column-165	165 cm	632 010

Mirror columns

Individual mirror column (without PSEN opII adjustable base unit)

Product type	Features	Height	Order no.
PSEN opII mirror column-060	Mirror column (deviating mirror in protective column)	60 cm	632 032
PSEN opII mirror column-090	Mirror column (deviating mirror in protective column)	90 cm	632 033
PSEN opII mirror column-120	Mirror column (deviating mirror in protective column)	120 cm	632 034
PSEN opII mirror column-165	Mirror column (deviating mirror in protective column)	165 cm	632 035

Protective column sets

consisting of

- ▶ PSEN opII protective column-xxx,
- ▶ PSEN opII adjustable base unit and
- ▶ Floor anchor PSEN screw set mirror column

Product type	Features	Height	Order no.
PSEN opII protective column-060 Set	With protective column PSEN opII protective column-060	60 cm	632 505
PSEN opII protective column-090 Set	With protective column PSEN opII protective column-090	90 cm	632 506
PSEN opII protective column-120 Set	With protective column PSEN opII protective column-120	120 cm	632 507
PSEN opII protective column-165 Set	With protective column PSEN opII protective column-165	165 cm	632 508
PSEN opII protective column-195 Set	With protective column PSEN opII protective column-195	195 cm	632 509

Protective columns

Protective column individually (without PSEN opII adjustable base unit)

Product type	Features	Height	Order no.
PSEN opII Protective Column-060/1	Protective column for safety light curtain	600 mm	632 500
PSEN opII Protective Column-090/1	Protective column for safety light curtain	900 mm	632 501
PSEN opII Protective Column-120/1	Protective column for safety light curtain	1200 mm	632 502
PSEN opII Protective Column-165/1	Protective column for safety light curtain	1650 mm	632 503
PSEN opII Protective Column-195/1	Protective column for safety light curtain	1950 mm	632 504

Order reference: Component parts**Transmitter**

Product type	Features	Order no.
PSEN opII4B-s-170-045 EMITTER	For safety light curtain for body protection, Resolution 170 mm Protected field height 450 mm	632 420
PSEN opII4B-s-170-060 EMITTER	For safety light curtain for body protection, Resolution 170 mm Protected field height 600 mm	632 421
PSEN opII4B-s-170-075 EMITTER	For safety light curtain for body protection, Resolution 170 mm Protected field height 750 mm	632 422
PSEN opII4B-s-170-090 EMITTER	For safety light curtain for body protection, Resolution 170 mm Protected field height 900 mm	632 423
PSEN opII4B-s-170-120 EMITTER	For safety light curtain for body protection, Resolution 170 mm Protected field height 1200 mm	632 424
PSEN opII4B-s-170-150 EMITTER	For safety light curtain for body protection, Resolution 170 mm Protected field height 1500 mm	632 425
PSEN opII4B-s-300-045 EMITTER	For safety light curtain for body protection, Resolution 300 mm Protected field height 450 mm	632 430
PSEN opII4B-s-300-060 EMITTER	For safety light curtain for body protection, Resolution 300 mm Protected field height 600 mm	632 431
PSEN opII4B-s-300-075 EMITTER	For safety light curtain for body protection, Resolution 300 mm Protected field height 750 mm	632 432
PSEN opII4B-s-300-090 EMITTER	For safety light curtain for body protection, Resolution 300 mm Protected field height 900 mm	632 433
PSEN opII4B-s-300-120 EMITTER	For safety light curtain for body protection, Resolution 300 mm Protected field height 1200 mm	632 434

Product type	Features	Order no.
PSEN opII4B-s-300-150 EMITTER	For safety light curtain for body protection, Resolution 300 mm Protected field height 1500 mm	632 435

Receiver

Product type	Features	Order no.
PSEN opII4B-s-170-045 RECEIVER	For safety light curtain for body protection, Resolution 170 mm Protected field height 450 mm	632 460
PSEN opII4B-s-170-060 RECEIVER	For safety light curtain for body protection, Resolution 170 mm Protected field height 600 mm	632 461
PSEN opII4B-s-170-075 RECEIVER	For safety light curtain for body protection, Resolution 170 mm Protected field height 750 mm	632 462
PSEN opII4B-s-170-090 RECEIVER	For safety light curtain for body protection, Resolution 170 mm Protected field height 900 mm	632 463
PSEN opII4B-s-170-120 RECEIVER	For safety light curtain for body protection, Resolution 170 mm Protected field height 1200 mm	632 464
PSEN opII4B-s-170-150 RECEIVER	For safety light curtain for body protection, Resolution 170 mm Protected field height 1500 mm	632 465
PSEN opII4B-s-300-045 RECEIVER	For safety light curtain for body protection, Resolution 300 mm Protected field height 450 mm	632 470
PSEN opII4B-s-300-060 RECEIVER	For safety light curtain for body protection, Resolution 300 mm Protected field height 600 mm	632 471
PSEN opII4B-s-300-075 RECEIVER	For safety light curtain for body protection, Resolution 300 mm Protected field height 750 mm	632 472
PSEN opII4B-s-300-090 RECEIVER	For safety light curtain for body protection, Resolution 300 mm Protected field height 900 mm	632 473

Product type	Features	Order no.
PSEN opII4B-s-300-120 RE-CEIVER	For safety light curtain for body protection, Resolution 300 mm Protected field height 1200 mm	632 474
PSEN opII4B-s-300-150 RE-CEIVER	For safety light curtain for body protection, Resolution 300 mm Protected field height 1500 mm	632 475

Appendix

Check list

The checklist below is intended as an aid in for the following work on a safety light curtain of PSEN opII4B Series:

- ▶ commissioning,
- ▶ recommissioning, and
- ▶ running the specified regular check.

Note that the check list is not intended to replace the plant-specific safety analysis required for commissioning/recommissioning, nor the resulting inspections and actions.

INFORMATION

Commissioning, recommissioning and regular inspection may only be carried out by qualified personnel.

We recommend that you keep the completed check list and store it with the machine documentation for reference.

No.	Action	OK	NOT OK	Notes
1	Check the category/standards			
	Does the category of the safety light curtain match the category required for the plant/machine?			
	Have the standards applicable for the plant/machine been considered?			
2	Check the safety light curtain ambient conditions			
	Have the environmental conditions been met (see Ambient conditions [ 15])?			
	Have the technical details been met for all the safety light curtain components?			
3	Check access to the danger zone Are all access points to the danger zone safeguarded either by safety light curtains or by mechanical safeguards?			

No.	Action	OK	NOT OK	Notes
4	Check minimum distance to danger zone			
	Has the minimum distance been calculated in accordance with the applicable standards?			
	Has the minimum distance been determined with the response time according to the beam coding (see Technical details [43])?			
	Has the calculated minimum distance been maintained at all points?			
5	Check protected field			
	Has the ability to creep underneath the protected field undetected been excluded?			
6	Check safety light curtain			
	Make sure that there are no objects in front of the safety light curtain (trailing cable, crossbeams, struts, covers, etc.).			
	Make sure that there are no transparent materials between the monitored protected field and the safety light curtain (such as the glass panel).			
	Are all the mechanical connections on the safety light curtain attached correctly?			
	Are all the electrical connections to the safety light curtain wired correctly?			
	Is the beam coding displayed correctly at the transmitter?			
7	Check the effectiveness of the safety light curtain during the hazardous movement			
	Is the safety light curtain effective throughout the whole of the plant/machine's hazardous movement?			
8	Check the output circuitry of the programmable safety and control system			
	Have OSSDs been incorporated as required for the desired safety category?			
	Are the switching elements that are connected to the OSSDs (valves, contactors, etc.) monitored with feedback loops?			
	Does the wiring of the OSSDs match the circuit diagram?			

No.	Action	OK	NOT OK	Notes
9	<p>Check guard function for protected field of the safety light curtain:</p> <p>Interrupt the protected field at various points: The hazardous movement must be shut down.</p>			
10	<p>Switch off safety light curtain</p> <p>Is the hazardous movement stopped immediately when you switch off?</p>			

EC declaration of conformity

This product/these products meet the requirements of the directive 2006/42/EC for machinery of the European Parliament and of the Council. The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/downloads.

Authorised representative: Norbert Fröhlich, Pilz GmbH & Co. KG, Felix-Wankel-Str. 2, 73760 Ostfildern, Germany
