### PRODUCT OVERVIEW

N-Tron's 302MC Industrial Media Converter is designed to allow the connection of 10/100BaseTX Ethernet devices to your 100BaseFX fiber cabling infrastructure.

The 302MC provides one RJ-45 auto sensing 10/100BaseTX port and one 100BaseFX port. The RJ-45 port is full/half duplex capable, using state-of-the-art Ethernet switching technology. The 302MC auto-negotiates the speed and flow control capabilities of the TX copper port connection, and configures itself automatically. The 100BaseFX fiber optic port utilizes industry standard ST or SC connectors and is configured for full duplex operation. Both multimode and singlemode fiber models are available.

Unlike most media converters, the 302MC uses switching technology. This means 10Mbps devices can be connected today and upgraded to 100Mbps later. The switching fabric simply scales up or down automatically to match the specific network environment.

The 302MC supports up to 4,000 MAC addresses, enabling these products to support extremely sophisticated and complex network architectures.

The N-Tron 302MC is well suited to convert 10/100 BaseTX industrial devices to fiber, allowing access to fiber based infrastructure and it's inherent advantages. Compared to copper based systems, fiber provides increased noise immunity and longer cable lengths.

The 302MC has extended operating environmental specifications to meet the harsh needs of the industrial environment. For cost savings and convenience the media converter can be DIN-RAIL mounted alongside Ethernet I/O or other Industrial Equipment. The unique compact size provides a small footprint, conserving space in the most critical dimension. The 302MC can also be panel mounted

To increase reliability, the 302MC contains redundant power inputs. LED's are provided to display the link status and activity of each port, as well as power on/off status.

### N-VIEW OPC PORT MONITORING (With -N Option Only)

The N-Tron N-View OLE for Process Control (OPC) Server Software can be combined with popular HMI software packages to add network traffic monitoring, trending and alarming to any application using N-Tron switches configured with the N-View option. N-Tron's N-View OPC Server collects 41 different traffic variables per port and five system level variables per switch. This information can provide a complete overview of the network load, service quality, and packet traffic. OPC client software can use N-View OPC Server data to resolve network problems quickly and improve system reliability.
