

**MODELS ZBG AND ZBH STANDARD DUTY ENCODER (Replaces MODEL RPGB)  
 MODEL ZHG HEAVY DUTY ENCODER (Replaces MODEL RPQH)**

- **CURRENT SINK OUTPUTS**
- **HIGH PULSE PER REVOLUTION (PPR) RATES**  
 Up to 1200 PPR for fine, high-resolution counting or precision speed measurement from slow shaft speeds.
- **QUADRATURE OUTPUT**  
 For position measurement, bi-directional counting and in systems with backlash counting requirements.
- **AVAILABLE WITH MS AND M12 CONNECTORS**

**MODEL ZBG and ZBH - FOR GENERAL INDUSTRIAL SERVICE (Replaces Model RPGB)**

The units contain an L.E.D. light source and a photo sensor that scans a shaft-mounted, slotted disc. An internal pulse-shaping amplifier circuit delivers a rectangular pulse signal from the current sinking output in response to the passing slots as it rotates. They can be direct-coupled to a machine shaft by means of a flexible-bellows, spring, or rubber sleeve type coupling that allows for axial and radial misalignment. They can also be coupled with light instrument timing-belts. Timing-belt drives also allow convenient gear-up or gear-down speed ratio changes that can be useful for obtaining non-standard PPR rates.

**MODEL ZHG - HEAVY-DUTY SEALED HOUSING (Replaces Model RPQH)**

These heavy duty units feature a heavy cast aluminum housing with 1/4" thick aluminum cover plates and 0-ring seals. Heavy duty bearings are double-sealed and allow radial shaft loading of 40 lbs (18 Kg).

A 1/2" (12.7 mm) NPT Conduit entry permits signal wiring to be run via flex-conduit to an internal terminal block. Electrical characteristics are identical to those for the Model ZBG. Terminal board markings correspond to the Pin-Out identification of the ZBG.

# SPECIFICATIONS

## ELECTRICAL SPECIFICATIONS

### 1. SUPPLY VOLTAGE:

- +4.75 to +28 VDC @ 80 mA max. from 0 °C to 85 °C
- +4.75 to +24 VDC @ 80 mA max. from 0 °C to 100 °C

### 2. OUTPUT: Current Sinking

**ZBG and ZHG (Single Channel):** 250 mA max.

**ZBH (Quadrature):** 250 mA max. current per output. Incremental - two square waves in quadrature with Channel A leading Channel B for clockwise rotation. (Quad. Phase relationship is 90° ±22.5 electrical degrees)

*Note: NPN Transistor outputs have 1.5 KΩ load resistors returned to supply for internal feed back purposes. This does not interfere with the ability to use these outputs as conventional "Open-Collector" outputs as long as the supply voltage for the ZB is supplied by the indicator or control receiving its output signal. The ZB's internal load resistor also allows the output to be used as a current source, however, load current must be limited to 1 mA max.*

### 3. MAXIMUM FREQUENCY:

**Single Channel:** 20 KHz

**Quadrature:** 20 KHz

PPR available up to 1270 for both single channel and quadrature.

## MECHANICAL SPECIFICATIONS

1. **MAXIMUM SHAFT SPEED:** 6000 RPM

2. **SHAFT DIAMETER:** 0.375" (9.5 mm)

3. **RADIAL SHAFT LOAD:** 40 lbs. operating (18 kg)

4. **AXIAL SHAFT LOAD:** 30 lbs operating (13.6 kg)

5. **STARTING TORQUE:**

**ZBG & ZBH:** 0.38 oz-in (2.68 N-mm)

**ZHG:** 3 oz-in (21.18 N-mm)

6. **MOMENT OF INERTIA:** 6.5 x 10<sup>-6</sup> oz-in-sec<sup>2</sup>

7. **CONNECTIONS:** 6-pin MS style or 8-Pin M12 connector. (Male) Mating connector and cable assembly sold separately. For wiring configuration, see Cable Connections. For Ordering Information, see Accessories.

8. **HOUSING:** Black non-corrosive finished 6063-T6 aluminum.

9. **BEARINGS:** ABEC3 double sealed ball bearings

10. **WEIGHT:**

**ZBG & ZBH:** 10 oz (283.5 g)

**ZHG:** 3.8 lbs (1.72 Kg)

## ENVIRONMENTAL SPECIFICATIONS

1. **OPERATING TEMPERATURE:** 0° to 100 °C (See supply voltage)

2. **STORAGE TEMPERATURE:** -25°C to +85°C

3. **HUMIDITY:** 98% RH non-condensing

4. **VIBRATION:** 10 g @ 58 to 500 Hz

5. **SHOCK:** 50 g @ 11 msec duration

## Cable Connections

The tables below list the pin connections from the ZBG and ZHG single channel and ZBH quadrature encoder to the optional CCARPG or CCM cable.

FUNCTION	6-PIN MS CONN	M12 CONN	CABLE WIRE COLOR
+VDC	A	1	RED
COMMON	B	2	BLACK
DATA A	C	3	WHITE
DATA B if appl. (quad)	D	4	GREEN
NO CONNECTION	E	5	—

# LENGTH SENSOR CONVERSION BRACKET WITH 6-PIN MS CONNECTOR

## ADAPTS APPROPRIATE ZBG and ZBH ROTARY PULSE GENERATOR TO LENGTH MEASUREMENT

The tubular arm length of this bracket, related to the wheel axis center-line of the encoder is 6.8" similar to the length sensors. The 10' long, 4-wire, shielded cable with 6-pin MS connector (included with conversion bracket) has the same color coding as described for the encoder cable P/N CCARPG01. Screws for mounting the conversion bracket are included.

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
LSCB	Length Sensor Conversion Bracket, w/10' Cable	LSCB1000
	Length Sensor Conversion Bracket, w/25' Cable	LSCB1025
	Length Sensor Conversion Bracket, w/50' Cable	LSCB1050
--	Hinge Clamp Assembly for Length Sensors & Conversion Bracket (Above)	LSAHC001

### DESCRIPTION

This conversion bracket allows the customer to assemble a custom length sensor by purchasing the following items separately.

1. Length Sensor Conversion Bracket (P/N LSCB1000)
2. An encoder with appropriate connector, PPR and output type.
3. One or two measuring wheels. Install OF & OK measuring wheels with set screw hub facing encoder shaft (as shown). Apply thread locking material to wheel set screw threads during installation to the encoder shaft.
4. Hinge Clamp Assembly (P/N LSAHC001)

Note: To complete installation, insure guards, shields or other devices are in place to protect personnel from rotating equipment.

### LENGTH SENSOR MEASUREMENT ACCURACY

Factors which affect measurement accuracy include Measuring Wheel accuracy and wear, and material conditions. Ideally, materials which are hard, thin and strong provide good readings, conversely, soft, thick and elastic materials can present problems in obtaining true readings. The great majority of these situations, where this effect is constant, can be compensated for by applying a multiplier to the quadrature output pulse train so as to obtain a corrected measurement. Counter or Rate Indicators with "input scaling" can compensate for Measuring Wheel wear and material elastic and compliance errors. In addition, English/Metric conversions may also be accomplished (See RLC catalog for more information).

Speed: 600 RPM</p> <p>Balanced version of 1ft. circumference available. Balanced to ANSI S2.19-1989 Quality Grade 6.3 @ 3000 RPM.</p>

## SELECTING APPROPRIATE WHEEL SIZE & PPR (Pulses Per Rev.) OF ROTARY PULSE GENERATOR

When the desired output of a length sensor and wheel combination is either in feet or inch units, selection of the proper combination is relatively straight forward. For example, with a 1-foot wheel circumference, a 1 PPR Rotary Pulse Generator will deliver 1 pulse/ft, 12 PPR would deliver 12 pulses/ft (1 pulse/inch); 100 PPR would yield 100 pulses/ft; and 120 PPR would permit measuring to 1/10th of an inch (1/120th of a foot).

### MODEL LSAHC - LENGTH SENSOR HINGE CLAMP ASSEMBLY

The Length Sensor Hinge Clamp Assembly provides an easy method for attachment and mounting of the Length Sensors and LSCB1 Conversion Bracket. The removable top on the solid zinc LSAHC mounting block allows quick installation of the Length Sensor handle tube and provides secure clamping retention. The mounting block pivots freely in zinc right angle brackets to allow mounting the assembly via clearance holes for 1/4" dia. bolts.

The lock washers must be used as indicated (between the bolt head and the top clamp piece). Assemble the top clamp piece as follows.

1. Tighten both bolts so that the top clamp half draws down evenly on the sensor tube.
2. Tighten the bolts until both lock washers are flat.
3. Then turn each bolt an additional 1/2 to 3/4 turn.

#### DIMENSIONS In inches (mm)

### ORDERING INFORMATION

MODEL NO.	DESCRIPTION	PART NUMBER
LSAHC	Length Sensor Hinge Clamp Assembly	LSAHC001

**CAUTION:** Downward tension on signal cable can cause wheel(s) to lift. Make sure cable is clamped to machine frame near encoder and allow slack.

**NOTE:** The weight at the Length Sensor unit provides sufficient traction for accurate operation when mounted as shown, with arm angle from horizontal not exceeding ±30°, and with hinge clamp toward the far extreme of the extension arm.

Length Sensors should be mounted so measuring wheel(s) contact ribbon, strip or web as it passes over a roller. As an alternative, wheel(s) can be driven by roller surface next to material being measured.
