PREFACE

Purpose	This manual gives specific information on how to apply and use the CIP [™] functions on the N-Tron® series 700/7000 switches.				
Audience	The manual is intended for use by personnel who are responsible for operating and maintaining network equipment; consequently, it assumes a basic working knowledge of general switch functions and the Internet Protocol (IP).				
Trademark Acknowledgments	Red Lion Controls acknowledges and recognizes ownership of the following trademarked terms used in this document.				
	 Ethernet[™] is a registered trademark of Xerox Corporation 				
	 EtherNet/IP[™] and CIP[™] are registered trademarks of ODVA[™] 				
	All other company and product names are trademarks of their respective owners				
Conventions	The following conventions are used throughout this manual to show information:				
i	Note: Emphasizes important information or calls your attention to related features or instructions.				

Related Publications and Document Updates

This document is revised only at major releases and therefore, may not always contain the latest product information. As needed, Tech Notes and/or other product documentation can be provided between major releases to describe any new information or document changes.

Also, as part of the 700 software, there is an online web-based help that describes all management related features.

 [2] The CIP Networks Library, Volume 2: EtherNet/IP Adaptation of CIP[™], Edition 1.17, Publication Number: PUB00002, Open DeviceNet Vendor Association, Inc., 4220 Varsity Drive, Suite A, Ann Arbor, MI 48108-5006 USA

Revision History The following information lists the release history of this document.

Revision Date	Content Description
April 8 2010	Added switches: 711FX3, 7010TX, 709FX, 710FX2, 714FX6, and 712FX4
September 2010	Added 7012FX2 switch
January 2011	Added 7026TX switch
February 2012	Added 7900 switch
August 2012	Added 716M12 switch
January 2016	Updated format and trademarks

Disclaimer Portions of this document are intended solely as an outline of CIP methodologies to be followed during the maintenance and operation of N-Tron series 700/7000 equipment. It is not intended as a step-by-step guide or a complete set of all procedures necessary and sufficient to complete all operations.

While every effort has been made to ensure that this document is complete and accurate at the time of release, the information that it contains is subject to change. Red Lion is not responsible for any additions to or alterations of the original document. Industrial networks vary widely in their configurations, topologies, and traffic conditions. This document is intended as a general guide only. It has not been tested for all possible applications, and it may not be complete or accurate for some situations.

1. Introduction

EtherNet/IPTM, better known as the Common Industrial Protocol (CIPTM), was designed for use in process control and industrial automation applications. CIP was designed to provide consistent device access to eliminate the need for vendor specific software for configuration and monitoring of individual devices.

N-Tron® switches with CIP support can be used to communicate with other industrial devices, such as Rockwell controllers.

1.1 CIP Components

The following CIP components are available with N-Tron series CIP enabled switches.

1.1.1 Electronic Data Sheet (EDS)

An electronic datasheet for each N-Tron Series switch is provided.

In a Rockwell environment EDS files are installed using the "EDS Hardware Installation Tool". This allows N-Tron Series switches to be recognized in an RSLinx environment.

1.1.2 CIP Objects

"Objects" are used to organize various information about the switch. There are four types of objects provided. Three are specified by the ODVA, and one is N-Tron series specific:

- Identity object
- TCP/IP Interface object
- Ethernet Link object
- N-Tron switch object

Standard "services" are associated with objects. Services exist for reading an attribute, setting an attribute, resetting a device, etc. See references [1] and [2] for specific details.

The following sections describe the attributes associated with each object type, such as attribute Id number and data format. All attributes can be read, but only some can be set, as shown by the "Set" column.

1.1.2.1 Identity Object

The identity object class (Class code = 0x01) and instance attributes are implemented as defined by CIP Vol 1, 5-2 [1]. There is one instance (1) of this object. Service code (0x32) will get all attributes, including optional attributes. The following table summarizes the attributes in the Identity object.

ld	Name	Set	Format	Description	
1	Vendor ID		UINT (16)	1006. This is N-Tron's ODVA EtherNet/IP	
				Vendor ID.	
2	Device Type		UINT (16)	0x0C. Communications Adapter	
3	Product Code		UINT (16)	Switch product code:	
				$708TX^{1} = 701$	
				708FX2 = 703	
				716TX = 705	
				716FX2 = 706	
				7018TX = 708	
				7018FX2 = 709	
				708M12 = 710	
				711FX3 = 711	
				7010TX = 713	
				709FX = 714	
				710FX2 = 715	
				714FX6 = 717	
				712FX4 = 718	
				7012FX2 = 719	
				7026TX = 720	
				7900 = 722	
				716M12 = 723	
				7506GX2 = 7506	
4	Major Revision		USINT (8)	Major version of CIP implementation.	
	Minor Revision		USINT (8)	Minor version of CIP implementation.	
5	Status		WORD (16)	Summary status of device. Bits:	
				Bit 0 If set, device has an owner	
				Bit 1 reserved	
				Bit 2 If set, device has non-default	
				configuration	
				Bit 3 reserved	
				Bits 4-7 Extended device status – not used	
				Bit 8 Minor recoverable fault	
				Bit 9 Minor unrecoverable fault	
				Bit 10 Major recoverable fault	
				Bit 11 Major unrecoverable fault	
				Bits 12-15 reserved	
				(see fault table below)	
6	Serial Number		UDINT (32)	Serial number of the device. This is the last	
				4 octets of the base switch MAC.	
7	Product Name		SHORT_STRING	Switch Model Number.	
			_	EX: 7018FX2	
l	1		1		

Revis	Revised 2016-01-19					
15	Assigned_Name	Set	STRINGI	This is the user assigned switch name.		
17	Geographic_Location	Set	STRINGI	This is the user assigned switch location.		

The table below defines fault bits within the Status attribute of the Identity object.

Bit	Called	Definition	
8	Minor Recoverable Fault	Power supply 1, Power supply 2, N-Ring Full, System, Port utilization, Temperature, N-Link partner is down, N-Link	
		integrity fault	
9	Minor Unrecoverable Fault	Configuration device error	
10	Major Recoverable Fault	N-Ring partial low, N-Ring partial high, N-Ring multiple managers, Boot loader version, N-Link partner port unknown, N-Link multiple masters, N-Link control fault, N-Link configuration fault	
11	Major Unrecoverable Fault	none	

1.1.2.2 TCP/IP Interface Object

The TCP/IP Interface object class (Class code = 0xF5) and instance attributes are implemented as defined by CIP Vol 2, 5-3 [2]. There is only one instance (1) of this object. The following table summarizes the attributes in the TCP/IP Interface object.

ld	Name	Set	Format	Description
1	Status		DWORD (32)	Interface status
				0 interface configuration
				attrib not configured
				1 interface configuration
				attrib is valid
2	Configuration		DWORD (32)	Interface capability flags. Bits:
	Capability			0 BOOTP client capable
				1 DNS client capable
				2 DHCP client capable
				3 DHCP-DNS update
				capable
				4 Configuration is settable
				5 Through bit 31 reserved
3	Configuration	Set	DWORD (32)	Interface control flags.
	Control			Bits 0-3:
				0 use interface configuration
				previously stored
				1 get interface configuration
				via BOOTP
				2 get interface configuration
				via DHCP
				3 through 15 reserved
				Bit 4=1 device shall resolve host
				names by querying a DNS server
4	Physical Link		STRUCT of:	
	Object			
	Path Size		UINT (16)	Size of Path
	Path		Padded	Logical segments identifying the
_			EPATH	physical link object
5	Interface		STRUCT of:	
	Configuration			
	IP Address	Set	UDINT (32)	The device's IP address.
	Network Mask	Set	UDINT (32)	The device's network mask
	Gateway	Set	UDINT (32)	Default gateway address
	Address			
	Name Server	Set	UDINT (32)	Primary name server
	Name Server 2	Set	UDINT (32)	Secondary name server
	Domain Name	Set	STRING	Default domain name
6	Host Name	Set	STRING	Host name

8	TTL Value		USINT	TTL Value for EtherNet/IP multicast
				packets. Default is 1. Range is 1-255
9	Mcast Config		STRUCT of:	IP multicast configuration
	Alloc Contro		USINT	Multicast address allocation control
				word. Determines how addresses are
				allocated
	Reserved		USINT	Reserved for future use. Shall be 0
	Num Mcast		UINT	Number of IP multicast addresses to
				allocate for EtherNet/IP
	Mcast Start		USDINT	Starting multicast address from which
	Addr			to begin allocation
13	Encapsulation	Set	UINT	Number of seconds of inactivity
	Inactivity			before TCP connection is closed. $0 =$
	Timeout			Disable, $1-3600 =$ timeout in seconds,
				Default = 120

1.1.2.3 Ethernet Link Object

The Ethernet Link object class (Class code = 0xF6) and instance attributes are implemented as defined by CIP Vol 2, 5-4 [2]. There is one instance of this object per switch port where instance 1 = port 1, instance 2 = port 2, etc. As per the CIP specification, the get all service code (0x01) will get all attributes, excluding vendor extensions. Service code (0x32) will get all attributes, including the N-Tron vendor extensions. The following table summarizes the attributes in the Ethernet Link object.

ld	Name	Set	Format	Description
1	Interface Speed		UDINT (32)	Interface speed currently in use. Speed
	-			in Mbps (e.g., 0, 10, 100, 1000, etc.)
2	Interface Flags		DWORD (32)	Interface status flags Bit map of
	_			interface flags. See section 5-4.3.2.1.
				Includes Link status, duplex mode,
				auto-negotiation status, etc.
3	Physical Address		ARRAY of 6	MAC address of switch port.
	-		USINTs (8)	•
4	Interface Counters		STRUCT of:	
	In Octets		UDINT (32)	Octets received on the interface.
	In Ucast Packets		UDINT (32)	Unicast packets received on the interface.
	In Nucast Packets		UDINT (32)	Non-unicast packets received on the
				interface.
	In Discards		UDINT (32)	Inbound packets received on the interface
				but discarded
	In Errors		UDINT (32)	= 0. Not available.
				Inbound packets that contain errors (does
				not include In Discards).
	In Unknown Protos		UDINT (32)	= 0. Not available.
				Inbound packets with unknown protocol
	Out Octets		UDINT (32)	Octets sent on the interface
	Out Ucast Packets		UDINT (32)	Unicast packets sent on the interface
	Out Nucast Packets		UDINT (32)	Non-unicast packets sent on the interface
	Out Discards		UDINT (32)	Outbound packets discarded
	Out Errors		UDINT (32)	= 0. Not available.
				Outbound packets that contain errors

5	Media Counters		STRUCT of	
5				Frames received that are not an integral
	Alighment Errors		0DINT (32)	number of octets in length
	FCS Errors		UDINT (32)	Frames received that do not pass the FCS check
	Single Collisions		UDINT (32)	Successfully transmitted frames which experienced exactly one collision
	Multiple Collisions		UDINT (32)	Successfully transmitted frames which experienced more than one collision
	SQE Test Errors		UDINT (32)	= 0. Not available.
				Number of times SQE test error message is generated
	Deferred Transmissions		UDINT (32)	Frames for which first transmission attempt is delayed because the medium is busy
	Late Collisions		UDINT (32)	Number of times a collision is detected later than 512 bit times into the transmission of a packet
	Excessive Collisions		UDINT (32)	Frames for which transmission fails due to excessive collisions
	MAC Transmit Errors		UDINT (32)	= 0. Not available. Frames for which transmission fails due to an internal MAC sub layer transmit error
	Carrier Sense Errors		UDINT (32)	= 0. Not available. Times that the carrier sense condition was lost or never asserted when attempting to transmit a frame
	Frame Too Long		UDINT (32)	Frames received that exceed the maximum permitted frame size
	MAC Receive Errors		UDINT (32)	 = 0. Not available. Frames for which reception on an interface fails due to an internal MAC sub layer receive error
6	Interface Control		STRUCT of:	
-	Control Bits	Set	WORD (16)	Interface Control Bits. Includes auto-
	Forced Interface Speed	Set	UINT (16)	Speed at which the interface shall be forced to operate. Speed in Mbps (10, 100, 1000, etc.)
7	Interface Type		USINT (8)	Type of interface: twisted pair, fiber, internal, etc
8	Interface State		USINT (8)	Current state of the interface: operational, disabled, etc
9	Admin State	Set	USINT (8)	Administrative state: enable, disable
10	Interface Label		SHORT_STR	Human readable identification: TX1, FX1,
			ING	
100	Interface Description		SHORT_STR ING	Human readable description. For example: Port 1 - 10/100 Mbit TX
101	Interface Utilization		USINT (8)	Port 15 - 100 MBit FX Percentage of entire interface bandwidth
102	Utilization Alarm Upper Threshold	Set	USINT (8)	Upper percentage at which to declare a
103	Utilization Alarm Lower Threshold	Set	USINT (8)	Lower percentage at which to declare a
104	Broadcast Limit	Set	USINT (8)	Broadcast limiting percentage (0-100).
105	TX Unicast Packet Rate		UDINT32	Number of TX unicast packets per second

REVI	sed 2016-01-19		
106	RX Unicast Packet Rate	UDINT32	Number of RX unicast packets per second.
107	TX Multicast Packet Rate	UDINT32	Number of TX multicast packets per second
108	RX Multicast Packet Rate	UDINT32	Number of RX multicast packets per second
109	TX Broadcast Packet Rate	UDINT32	Number of TX broadcast packets per second.
110	RX Broadcast Packet Rate	UDINT32	Number of RX broadcast packets per second.
111	TX Multicast Packets	UDINT32	Total number of TX multicast packets.
112	RX Multicast Packets	UDINT32	Total number of RX multicast packets.
113	TX Broadcast Packets	UDINT32	Total number of TX broadcast packets.
114	RX Broadcast Packets	UDINT32	Total number of RX broadcast packets.
115	Port Role	UDINT32	Bit mask of port roles. Bits= 0 = RSTP 1 = N-Ring 2 = N-Link Control 3 = N-Link Partner 4 = N-Link Coupler

1.1.2.4 N-Tron Switch Object

The N-Tron object (Class code = 0xC0) is a vendor specific object and is implemented as defined by CIP Vol 1, 4 [1]. There is only one instance (1) of this object. The following table summarizes the attributes of the N-Tron object.

ld	Name	Set	Format	Description
1	Device Up		UDINT (32)	Number of seconds since device was powered up.
	Time			
2	Port Count		UDINT (32)	Total port count
3	Valid Ports		LWORD (64)	0 = Invalid Port, $1 =$ Port Exists on device
			AB: DINT[2]	Bit 0: Port 1
				Bit 1: Port 2
				etc.
4	Global Admin		LWORD (64)	0 = Port Disabled, 1 = Port Enabled
	Status		AB: DINT[2]	Bit 0: Port 1
				Bit 1: Port 2
				etc.
5	Global Link		LWORD (64)	0 = Link Down, 1 = Link Up
	Status		AB: DINT[2]	Bit 0: Port 1
				Bit 1: Port 2
				etc.
6	System Faults		DWORD (32)	Bit 00: Power Supply 1
				Bit 01: Power Supply 2
				Bit 02: N-Ring Fault (complete)
				Bit 03: N-Ring Partial Fault (low port)
				Bit 04: N-Ring Partial Fault (high port)
				Bit 05: N-Ring Multiple Managers
				Bit 06: System error
				Bit 07: Dongle Configuration Invalid
				Bit 08: N-Link Fault
				Bit 09: Boot loader version mismatch

				Bit 10: Port Utilization Alarm
				Bit 11: Temperature Alarm
7	IGMP Querier		USINT (8)	Ouery Status:
	Status			$0 = \text{Disabled} \ 1 = \text{Active (manual)} \ 2 = \text{Active}$
	Status			(Auto) $3 = \text{Backup}$ (Auto) [enabled but not active].
8	IGMP Version		USINT (8)	IGMP Version (V1 V2 V3 etc)
9	IGMP		USINT (8)	Percent of maximum canacity Takes into account
-	Resource			the number of groups used per max groups and any
	Usage			other possible resource limitations (0-100)
10	IGMP Active		UDINT (32)	IP of the active IGMP querier
	Querier			n of the active form quener.
11	CPU Usage		USINT (8)	Percent of usage $(0, 100)$
12	Close 1		UINT (16)	Number of CID Ethernet/ID class 1 (multicast)
12	Connections			connections.
13	Class 3		UINT (16)	Number of CIP Ethernet/IP class 3 (unicast)
	Connections			connections.
14	Temperature Alarm Upper Threshold	Set	INT (16)	Upper temperature (C) at which to declare an alarm
15	Temperature Alarm Lower Threshold	Set	INT (16)	Lower temperature (C) at which to declare an alarm
16	Contact Status		BYTE (8)	2 Bits per contact. 00=Not Present, 01=Open,
47	Terrestore			10=Closed.
17	Temperature_C		INT (16)	on device.
18	Temperature_F		INT (16)	Temperature in degrees F. 0x7FFF = Not Supported on device.
19	Reset MIB Counts	Set	LWORD (64)	Reset port MIB counters. (1 bit per port to reset).
20	Device MAC		ARRAY of 6	MAC address of device
	Address		USINTs (8)	
21	Device Role		UDINT (32)	Bit mask of device roles. Bits=
				1 = N-Ring Member
				2 = N-Ring AutoDetect
				3 = N-Link Master
				4 = N-Link Slave
22				5 = N-Link Coupler
22	Status		DTIE (0)	0 = Not Supported, 1 = Not Present, 2 = Present
23	System	Set	UDINT32	Bit mask of system config. Bits=
	Configuration			Bit 0: GET: Changes have been made that have not
				been saved.
				Bit 1: GET: Changes have been made that require a
				reboot to take effect.
				SET: Shutdown and reboot device
				Note: SET feature will be removed in a future
				release.

Revised 20	16-01-19		
24	System Firmware Version String	SHORT_STR ING	Human readable representation of firmware version string.
25	System Boot Loader Version String	SHORT_STR ING	Human readable representation of boot loader version string.
26	System Fault String	STRINGI	Human readable representation of error status. May contain multiple errors. Length is contained as part of the STRINGI data type.

1.1.2.5 CIP Services

The table following is a summary of the supported services as defined by CIP Vol 1, Appendix A: Explicit Messaging Services [1].

Service Code	Service Description	Identity	TCP/IP	Ethernet Link	N-Tron	Vendor Object 1
1	Get_Attributes_All	yes	yes	yes	yes	yes
5	Reset	Yes – reset switch or restore factory configuration				
14	Get_Attribute_Single	yes	yes	yes	yes	yes
16	Set_Attribute_Single	Attributes 15,17	Attributes 3,5	Attributes 6,9, 102- 104	Attributes 14,15,19,23	Attributes 6,7,10
Vendor Specific						
50	Get_All_Attributes – including vendor defined attributes	yes		yes		yes
Object Specific						
76	Get_And_Clear			Attributes 4.5		

1.1.3 Accessing Data

1.1.3.1 Explicit Messaging

Explicit messaging refers to a request/response form of communications over a CIP (TCP/IP) connection. Applications can use explicit messaging, for example, to invoke the "Get All Attributes" service and read all attributes of the Identity object.

1.1.3.2 I/O Connections

I/O connections are used to send data (grouped in assemblies) between devices periodically. The interval between sends is the "Requested Packet Interval", or RPI.

The N-Tron switch assemblies (Input, Output, and Configuration) are defined in the following table.

N-Tron switch	Assembly Number	Size (bytes)
Input (to switch)*	101	4
Output (from switch)	102	104
Configuration*	103	0
- not currently used		

In an RSLogix 5000 environment, these assemblies are configured in the "Connection Parameters" panel of the Generic Ethernet Module. (Note that input and output assemblies are reversed.) More information is contained in the section for Add-On Instruction installation.

2. Rockwell RSLogix 5000 – AOI

2.1 Material Prerequisites

- N-Tron® series switch
- RSLogix Add-On Instructions (AOI)

2.2 Installation Instructions

2.2.1 Software Installation Prerequisites

- 1. RSLogix 5000 version 17 or later
- 2. N-Tron switch with firmware version that includes CIPTM support

2.2.2 Summary of Installation Steps

- 1. Import the Add-On Instruction (AOI)
- 2. Add your N-Tron switch to the I/O Configuration tree
- 3. Add an instance of the AOI in your application
- 4. Create and configure tags for the AOI

2.3 Configuration of RSLogix Project

Extract all files from the zip file to your desktop or destination folder.

2.3.1 Importing an Add-On Instruction

- 1. Open an RSLogix project.
- 2. Import the N-Tron Add-On Instruction (AOI).
- 3. In the controller organizer window, right click "Add-On Instructions" folder, select "Import Add-On Instruction" and browse to the folder containing AOI_NTRON_*.L5X files. Import an AOI for each switch type installed.

4. The Add-On Instruction tree showing AOIs for 708FX2, 708TX, and several auxiliary AOIs.

2.3.2 Add a Generic Ethernet Module to the I/O Configuration.

The Generic Ethernet Module is located under the "Communications" group:

Status: Offline OK Cancel Apply Help					

1. Click the Connection tab and set the desired RPI. The input assembly will be received from the switch at the selected RPI.

/ised 2	016-01-19
	Module Properties: LocalENB (ETHERNET-MODULE 1.1)
	General* Connection Module Info
	<u>R</u> equested Packet Interval (RPI): β200.0
	Major Fault On Controller If Connection Fails While in Run Mode
	Status: Offline OK Cancel Apply Help

2. Click OK The new module will appear in the I/O Configuration tree:

2.3.3 Add an Instance of the AOI in Your Application

Create a new rung in the MainRoutine and add the AOI for your specific switch to the rung.

The following will appear:

2.3.4 Create and Configure Tags for the AOI

Add tag names for the various fields. For example:

AOI_NTRON_708	witch. Copyright N
AOI_NTRON_708FX2_v1	N228
Switch_Inputs	N228:I.Data
Switch_Output	N228:0.Data
Switch_Parameters	N228Params
Input_Assembly N2:	28InputAssembly
Get_Message	N228GetMsg 🛄
Get_Message_Extended	N228GetMsgExt
Storage	N228Storage
Set_Message	N228SetMsg 🛄
SetData	N228SetData

1. Right click on each new tag name and create each tag.

Note: The tags for Switch_Inputs and Switch_Outputs, shown in the rectangle above, were created when the Generic Ethernet Module was added.

For example:

AOI_NTRON_70 AOI for N-TRON 708FX2 AOI_NTRON_708FX2_v1 Switch_Inputs Switch_Output	08FX2_v1_0 switch. Copyrig I N2 N228:I.D: N228:O.D:	nt N 28 ata	
Input_Assembly N2	228InputAss	New "N228Params"	Ctrl+W
Get_Message Get_Message_Extended	N228G N228Gett	Cu <u>t</u> Instruction	Ctrl+X
Storage	N228S 🗈	Copy Instruction	Ctrl+C
Set_Message SetData	N2289 N2285	Paste	Ctrl+V
		Delete Instruction	Del
		Add Ladder Element	Alt+Ins
		Edit <u>M</u> ain Operand Description	on Ctrl+D
		Save Instruction Defaults	

2. Click the button to the right of the "Get_Message" tag and configure as shown:

Message Configuration - N228GetMsg					
Configuration Communication Tag					
Message <u>Type:</u> CIP Generic	_				
Service Custom	Source Element:				
Service 1 (Hex) <u>C</u> lass: 1 (Hex) Code: <u>1</u> Attri <u>b</u> ute: 1 (Hex)	Source Length: 0 (Bytes) Destination N228Storage[0] New Tag

2.3.5 Verify the New RSLogix Configuration

- 1. Verify your changes by clicking Logic > Verify > Controller.
- 2. If there are no warnings or errors, the RSLogix configuration is complete.

2.4 Input_Assembly Parameter

Some data comes from the switch at the RPI (requested packet interval) set for the Generic Ethernet Module. The data is available in tags like these below (a mapping of the Switch_Inputs data):

-N228InputAssembly
-N228InputAssembly.System_Faults
N228InputAssembly.System_Faults.Faults
-N228InputAssembly.System_Faults.Power_Supply_1
-N228InputAssembly.System_Faults.Power_Supply_2
-N228InputAssembly.System_Faults.NRing_Full
-N228InputAssembly.System_Faults.NRing_Part_Low
-N228InputAssembly.System_Faults.NRing_Part_High
-N228InputAssembly.System_Faults.NRing_Multiple_Managers
-N228InputAssembly.System_Faults.System
-N228InputAssembly.System_Faults.Config_Device
-N228InputAssembly.System_Faults.NLink
-N228InputAssembly.System_Faults.Boot_Loader_Version
-N228InputAssembly.System_Faults.Port_Utilization
N228InputAssembly.System_Faults.Temperature
N228InputAssembly.Admin_Status
-N228InputAssembly.Admin_Status_TX1
-N228InputAssembly.Admin_Status_TX2
-N228InputAssembly.Admin_Status_TX3
-N228InputAssembly.Admin_Status_TX4
-N228InputAssembly.Admin_Status_TX5
-N228InputAssembly.Admin_Status_TX6
-N228InputAssembly.Admin_Status_FX1
-N228InputAssembly.Admin_Status_FX2
N228InputAssembly.Link_Status
-N228InputAssembly.Link_Status_TX1
-N228InputAssembly.Link_Status_TX2
-N228InputAssembly.Link_Status_TX3
-N228InputAssembly.Link_Status_TX4
-N228InputAssembly.Link_Status_TX5
-N228InputAssembly.Link_Status_TX6
-N228InputAssembly.Link_Status_FX1
-N228InputAssembly.Link_Status_FX2

These tags represent a switch specific (708FX2) view of the assembly data.

2.5 Switch_Parameters Parameter

The AOI requests additional information from the switch as needed by a faceplate display (and when started). This includes the CIP Identity object, the CIP TCP/IP object, an instance of the CIP Ethernet Link object, and the NTRON Switch object.

The following RSLogix 5000 screenshot shows a top level view of some of the AOI "Switch_Parameters" structure:

-N228params	UDT_NTRON_Switch_Common_v0	
• N228params.Generic_Inputs	UDT_NTRON_Switch_In_v0	assembly received from switch
• N228params.Output	DINT	assembly sent to switch
∃ N228params.Identity	UDT_NTRON_CIP_Identity_v0	N-TRON CIP Identity Object
• N228params. TCPIP	UDT_NTRON_CIP_TCPIP_Interface_v0	N-TRON CIP TCP/IP Interface Object
	UDT_NTRON_CIP_Switch_v0	N-TRON CIP Custom Object
■ N228params.Ethernet_Link	UDT_NTRON_CIP_Ethernet_Link_v0[64]	N-TRON CIP Ethernet Link Object
🛨 N228params.Data	UDT_NTRON_CIP_DATA_v0	Related to HMI data and control
H N228params.Control	UDT_NTRON_CIP_Control_v0	Created to control explicit CIP messaging

N228Params.Generic_Inputs is a generic view of the assembly data from a switch.

2.6 Explicit Messaging Options

To direct the AOI to gather this information (via explicit messaging) for other purposes (example: not using faceplates), use the following members of the N228Params.Control tag:

Name	Data Type	Description	
		Use this member to read Ethernet Link object for one port. To	
		read more than one port, use Read_Port_Mask. Set by the	
		faceplate. Port data is copied to the	
Selected_Port	INT	UDT_NTRON_CIP_DATA_v0 data type.	
		0 - explicit messaging is disabled; 1 - explicit messaging is	
Request_Data	BOOL	enabled	
Read Port Mask	DINT	Set bit n to read ethernet link object for port n+1	
		Used to control time between each MSG call to read CIP	
		Identity object, TCPIP object, N-TRON object, and selected	
Explicit_Messaging_Timer		Ethernet Link objects. Minimum is 200 ms. Default is 1000	
_Reset	DINT	ms.	

Sample ladder logic rungs are available that show how to control explicit messaging.

2.7 Troubleshooting

Module Fault (Code 16#0315) Connection Request Error: Invalid segment type.

This error occurs when the assembly information specified for the Generic Ethernet Module does not match the assembly information on the N-Tron switch.

2.8 Sample Project

A sample project is included in the CIP_Installation_Kit_1_7_0.zip file. It is named NTRON_Demo.ACD.

To use the sample project, you may need to change the controller type used in your environment, and you will need to setup the Project path.

If you have any suggestions for improving the AOI or the installation instructions, please send them to Support@redlion.net with subject "RSLogix5000 AOI".

3. Rockwell RSLogix 5000 – Tag Reference

The assembly data received from an N-Tron® series switch can be viewed with generic tags or switch specific tags.

Generic tags are defined by the data type UDT_NTRON_Switch_In_v0. Switch specific tags are defined by a switch specific data type.

Switch	Data Type
7018FX2	UDT_NTRON_Switch_7018FX2_In_v0
7018TX	UDT_NTRON_Switch_7018TX_In_v0
708FX2	UDT_NTRON_Switch_708FX2_In_v0
708M12	UDT_NTRON_Switch_708M12_In_v0
708TX	UDT_NTRON_Switch_708TX_In_v0
716FX2	UDT_NTRON_Switch_716FX2_In_v0
716TX	UDT_NTRON_Switch_716TX_In_v0
7506GX2	UDT_NTRON_Switch_7506GX2_In_v0
711FX3	UDT_NTRON_Switch_711FX3_In_v0
7010TX	UDT_NTRON_Switch_7010TX_In_v0
709FX	UDT_NTRON_Switch_709FX_In_v0
710FX2	UDT_NTRON_Switch_710FX2_In_v0
714FX6	UDT_NTRON_Switch_714FX6_In_v0
712FX4	UDT_NTRON_Switch_712FX4_In_v0
7012FX2	UDT_NTRON_Switch_7012FX2_In_v0
7026TX	UDT_NTRON_Switch_7026TX_In_v0
7900	UDT_NTRON_Switch_7900_In_v0
716M12	UDT_NTRON_Switch_716M12_In_v0

The following sections present some of the tag descriptions:

3.1 Generic Assembly Tags

Data Type: UDT_NTRON_Switch_In_v0

Generic view of assembly data received from an N-Tron Switch.

Name	Data Type	Description
System_Faults	UDT_NT RON_Syst em_Faults _NT24k_v 0	Status of various system faults
Admin_Status	DINT	Admin Status of first 32 ports. Also available as port specific tags
Admin_Status_1	BOOL	1=enabled, 0=disabled
	-	
Admin_Status2	DINT	Admin Status of second 32 ports. Also available as port specific tags
Admin_Status_33	BOOL	1=enabled, 0=disabled
Link_Status	DINT	Link Status of first 32 ports. Also available as port specific tags
Link_Status_1	BOOL	1=active, 0=inactive
Link_Status2	DINT	Link Status of second 32 ports. Also available as port specific tags

Name	Data Type	Description
Link_Status_33		
Link_Status_34	-	
Link_Status_35		
	BOOL	1=active, 0=inactive
Link_Status_62		
Link_Status_63		
Link_Status_64	-	
Utilization_Alarm	DINT	Bandwidth utilization alarms for first 32 ports. Also available as port specific tags
Utilization_Alarm_1		
Utilization_Alarm_2	-	
Utilization_Alarm_3	-	1=bandwidth utilization exceeds a high or low limit
	BOOL	0=bandwidth utilization within limits
Utilization_Alarm_30	-	
Utilization_Alarm_31	-	
Utilization_Alarm_32	-	
Utilization_Alarm2	DINT	Bandwidth utilization alarms for second 32 ports. Also available as port specific tags
Utilization_Alarm_33		1=bandwidth utilization exceeds a high or low limit,
Utilization_Alarm_34		
Utilization_Alarm_35		
	BOOL	
Utilization_Alarm_62	-	
Utilization_Alarm_63	-	
Utilization_Alarm_64	-	
Class1_Connections	INT	Number of CIP EtherNet/IP class 1 (multicast) connections
Class3_Connections	INT	Number of CIP EtherNet/IP class 3 (unicast) connections
Temperature_C	INT	Temperature in degrees Celsius. 0x7FFF = Not supported on device.
Temperature_F	INT	Temperature in degrees Fahrenheit. 0x7FFF = Not supported on device
CPU_Utilization	SINT	Percent of CPU usage, 0-100
Contact_Status	SINT	2 Bits per contact. 00=Not Present, 01=Open, 10=Closed

Name	Data Type	Description
Utilization_1		
Utilization_2		
Utilization_3		
	SINT	Bandwidth utilization in percent
Utilization_62		
Utilization_63		
Utilization_64		
Update_Counter	INT	

3.2 7506GX2 Assembly Tags

Data Type: UDT_NTRON_Switch_7506GX2_In_v0

Specific view of assembly data received from an N-Tron 7506GX2 Switch.

Name	Data Type	Description
	UDT_NTRON_	
	System_Faults_	
System_Faults	v0	Status of various system faults.
		Admin_Status of first 32 ports. Also
Admin_Status	DINT	available as port specific tags.
Admin_Status_T1	BOOL	1=enabled, 0=disabled
Admin_Status_T2	BOOL	
Admin_Status_T3	BOOL	
Admin_Status_T4	BOOL	
Admin_Status_GB1	BOOL	
Admin_Status_GB2	BOOL	
		Link_Status of first 32 ports. Also
Link_Status	DINT	available as port specific tags.
Link_Status_T1	BOOL	1=active, 0=inactive
Link_Status_T2	BOOL	
Link_Status_T3	BOOL	
Link_Status_T4	BOOL	
Link_Status_GB1	BOOL	
Link_Status_GB2	BOOL	
		Bandwidth utilization alarms for first 32
Utilization_Alarm	DINT	ports. Also available as port specific tags

		1=bandwidth utilization exceeds a high
		or low limit, 0=bandwidth utilization
Utilization_Alarm_T1	BOOL	within limits
	DOOL	
Utilization_Alarm_12	BOOL	
Utilization_Alarm_T3	BOOL	
Utilization_Alarm_T4	BOOL	
Utilization_Alarm_G		
B1	BOOL	
Utilization_Alarm_G		
B2	BOOL	
		Number of CIP Ethernet/IP class 1
Class1_Connections	INT	(multicast) connections
		Number of CIP Ethernet/IP class 3
Class3_Connections	INT	(unicast) connections
		Temperature in degrees Celsius. 0x7FFF
Temperature_C	INT	= Not supported on device.
-		Temperature in degrees Fahrenheit.
Temperature_F	INT	0x7FFF = Not supported on device.
CPU Utilization	SINT	Percent of CPU usage, 0-100
		2 Bits per contact 00=Not Present
Contact Status	SINT	01=Open 10=Closed
Utilization_T1	SINT	bandwidth utilization in percent
Utilization_T2	SINT	
Utilization_T3	SINT	
Utilization_T4	SINT	
Utilization_GB1	SINT	
Utilization_GB2	SINT	

3.3 System Fault Tags

	Data	
Name	Туре	Description
Faults	DINT	
Power_Supply_1	BOOL	1=Indicates a low voltage on power supply V1
Power_Supply_2	BOOL	1=Indicates a low voltage on power supply V2
		1=Indicates that an N-Ring connection is
NRing_Full	BOOL	completely broken.
		1=Indicates that an N-Ring connection is only
		broken in one direction. The lower N-Ring port
NRing_Part_Low	BOOL	is not receiving self health frames around the

		N-Ring but the higher N-Ring port is.
		1=Indicates that an N-Ring connection is only
		broken in one direction. The higher N-Ring
		port is not receiving self health frames around
NRing_Part_High	BOOL	the N-Ring but the lower N-Ring port is.
NRing_Multiple_Man		1=Indicates that more than one N-Ring
agers	BOOL	Manager exists on an N-Ring.
System	BOOL	1=Indicates a system fault.
		1=Indicates a problem with the configuration
Config_Device	BOOL	device.
		1=Indicates that the N-Link Master or Slave
NLink	BOOL	encountered a problem.
		1=Indicates a problem with the version of the
Boot_Loader_Version	BOOL	boot loader firmware.
		1=Indicates one or more ports have exceeded a
Port_Utilization	BOOL	high or low bandwidth utilization limit.
		1=Indicates the switch temperature has
Temperature	BOOL	exceeded a high or low temperature limit.

3.4 CIP Tags

There are tags for each CIP object. The tags correspond to the object's attributes.

- Identity object
- TCP/IP Interface object
- Ethernet Link object
- N-Tron® switch object

3.4.1 Identity Object

Data Type: UDT_NTRON_CIP_Identity_v0

Name	Data Type	Description	
Vendor_ID INT		ODVA Vendor ID. N-Tron = 1006	
Device_Type	INT	0x0C. Communications Adapter	
		708TX=701, 708FX2=703, 716TX=705,	
		716FX2=706, 7018TX=708,	
		7018FX2=709, 708M12=710,	
		711FX3=711, 7010TX=713, 709FX=714,	
		710FX2=715, 714FX6=717, 712FX4=718,	
		7012FX2 =719, 7026TX= 720, 7900= 722,	
Product_Code INT		716M12=723, 7506GX2=7506	
		Major revision of the item the Identity	
Major_Revision SINT		Object represents	
		Minor revision of the item the Identity	
Minor_Revision	SINT	Object represents	
Status	INT	Summary status of device	
Serial_Number	DINT	Serial number of device	
		Human readable identification. Switch	
Product_Name	STRING	model number. Ex: N-Tron 7018FX2	
	UDT_NTRO		
Assigned_Name	N_String1024	User assigned switch name.	
	UDT_NTRO		
Geographic_Location	N_String1024	This is the user assigned switch location.	

3.4.2 TCPIP Object

Data Type: UDT_NTRON_CIP_TCPIP_Interface_v0

Name	Data Type	Description
Status	DINT	Interface status
Configuration_Capability	DINT	Interface capability flags

Configuration_Control	DINT	Interface control flags	
Path_Size	INT	Size of Path	
Object_Path_1	INT	Logical segments identifying the physical link object	
Object_Path_2	INT	Logical segments identifying the physical link object	
IP_Address	DINT	The device's IP address.	
Network_Mask	DINT	The device's network mask	
Gateway_Address	DINT	Default gateway address	
Name_Server_1	DINT	Primary name server	
Name_Server_2	DINT	Secondary name server	
Domain_Name	STRING	Default domain name	
Host_Name	STRING	Host name	

3.4.3 Ethernet Link Object

Data Type: UDT_NTRON_CIP_Ethernet_Link_v0

Name	Data Type	Description
		Interface speed currently in use. Speed
Interface_Speed	DINT	in Mbps (e.g., 0, 10, 100, 1000, etc.)
	UDT_NTR	
	ON_CIP_I	
	nterface_Fl	
Interface_Flags	ags_v0	Interface status flags
Physical_Address	SINT[6]	MAC layer address
InOctets	DINT	Octets received on the interface
		Unicast packets received on the
InUcastPackets	DINT	interface
		Non-unicast packets received on the
InNucastPackets	DINT	interface
		Inbound packets received on the
InDiscards	DINT	interface but discarded
		Inbound packets that contain errors
InErrors	DINT	(does not include In Discards)
		Inbound packets with unknown
InUnknownProtos	DINT	protocol
OutOctets	DINT	Octets sent on the interface
OutUcastPackets	DINT	Unicast packets sent on the interface
		Non-unicast packets sent on the
OutNucastPackets	DINT	interface

OutDiscards	DINT	Outbound packets discarded
OutErrors	DINT	Outbound packets that contain errors
		Frames received that are not an integral
Alignment_Errors	DINT	number of octets in length
		Frames received that do not pass the
FCS_Errors	DINT	FCS check
		Successfully transmitted frames which
Single_Collisions	DINT	experienced exactly one collision
		Successfully transmitted frames which
Multiple_Collisions	DINT	experienced more than one collision
		Number of times SQE test error
SQE_Test_Errors	DINT	message is generated
		Frames for which first transmission
		attempt is delayed because the medium
Deferred_Transmissions	DINT	is busy
		Number of times a collision is detected
		later than 512 bit- times into the
Late_Collisions	DINT	transmission of a packet
		Frames for which transmission fails due
Excessive_Collisions	DINT	to excessive collisions
		Frames for which transmission fails due
		to an internal MAC sub layer transmit
MAC_Transmit_Errors	DINT	error
		Times that the carrier sense condition
Comien Sense Emere	DINT	was lost or never asserted when
Carrier_Sense_Errors	DINI	Encode attempting to transmit a frame
Frome Tee Long	DINT	Frames received that exceed the
Frame_100_Long	DINI	Frames for which recention on an
		interface fails due to an internal MAC
MAC Beceive Errors	DINT	sub layer, receive error
MAC_Receive_Enois		0 Auto pogotisto 0 indicatos 802 2 link
		o Auto-negotiate o indicates 602.5 link
		auto-negotiation is enabled. If auto-
		negotiation is disabled, then the device
		shall use the settings indicated by the
		Forced Duplex Mode and Forced
		Interface Speed bits: 1 Forced Duplex
		Mode If the Auto-negotiate bit is 0, the
		Forced Duplex Mode bit indicates
		whether the interface shall operate in
		full or half duplex mode. 0 indicates the
		interface duplex should be half duplex.
Control_Bits	INT	1 indicates the interface duplex
		Speed at which the interface shall be
		forced to operate. Speed in Mbps (10,
Forced_Interface_Speed	INT	100, 1000, etc.)

		0-unknown, 1-internal, 2-twisted pair, 3-
Interface_Type	SINT	optical
		0-unknown, 1-enabled and ready, 2-
Interface_State	SINT	disabled, 3-testing
Admin_State	SINT	1=enabled, 0=disabled
Interface_Label	STRING	Label like "TX5"
		Something like: Port 1 - 10/100 Mbit
Interface_Description	STRING	TX Port 15 - 100 MBit FX
		Percentage of entire interface bandwidth
Interface_Utilization	SINT	being used (0-100)
Utilization_Alarm_Upper_Thres		Upper percentage at which to declare a
hold	SINT	utilization alarm (0-100).
Utilization_Alarm_Lower_Thre		Lower percentage at which to declare a
shold	SINT	utilization alarm (0-100).
		Broadcast limiting percentage (0-100).
Broadcast_Limit	SINT	(BPCL)
		Number of TX unicast packets per
TX_Unicast_Packet_Rate	DINT	second.
		Number of RX unicast packets per
RX_Unicast_Packet_Rate	DINT	second.
		Number of TX multicast packets per
TX_Multicast_Packet_Rate	DINT	second
		Number of RX multicast packets per
RX_Multicast_Packet_Rate	DINT	second
		Number of TX broadcast packets per
TX_Broadcast_Packet_Rate	DINT	second.
		Number of RX broadcast packets per
RX_Broadcast_Packet_Rate	DINT	second
TX_Multicast_Packets	DINT	Total number of TX multicast packets.
RX_Multicast_Packets	DINT	Total number of RX multicast packets.
TX_Broadcast_Packets	DINT	Total number of TX broadcast packets.
RX_Broadcast_Packets	DINT	Total number of RX broadcast packets.
		Bit $0 = RSTP 1 = N-Ring 2 = N-Link$
		Control $3 = N$ -Link Partner $4 = N$ -Link
Port_Role	DINT	Coupler

3.4.4 N-Tron Switch Object

Data Type: UDT_NTRON_CIP_Switch_v0

Name	Data Type	Description
Device_Uptime	DINT	Number of seconds since device was powered up.
Port_Count	DINT	Total port count
Valid_Ports	DINT[2]	0 = Invalid port, 1 = Port exists on device Bit 0: Port 1 Bit 1: Port 2 etc.
Global_Admin_Status	DINT[2]	0 = Port disabled, 1 = Port enabled Bit n: Port n+1
Global_Link_Status	DINT[2]	0 = Link down, 1 = Link up Bit n: Port n+1
	UDT_NTR ON_System	Bit 00: Power Supply 1 Bit 01: Power Supply 2 Bit 02: N-Ring Fault (complete) Bit 03: N-Ring Partial Fault (low port) Bit 04: N-Ring Partial Fault (high port) Bit 05: N-Ring Multiple Managers Bit 06: System error Bit 07: Dongle Configuration Invalid Bit 08: N-Link Fault Bit 09: Boot loader version mismatch Bit 10: Port
System_Faults	_Faults_v0	Utilization Alarm Bit 11: Temperature Alarm
IGMP_Querier_Status	SINT	Query Status: 0 = Disabled, 1 = Active (manual), 2 = Active (Auto), 3 = Backup (Auto) [enabled but not active].
IGMP_Version	SINT	IGMP Version (V1, V2, V3, etc).
IGMP_Resource_Usage	SINT	Percent of maximum capacity. Takes into account the number of groups used per max groups and any other possible resource limitations.
IGMP_Active_Querier	DINT	IP of the active IGMP querier.
CPU_Usage	SINT	Percent usage Number of CIP Ethernet/IP class 1 (multicast)
Class3_Connections	INT	Number of CIP Ethernet/IP class 3 (unicast) connections.
Temperature_Alarm_Upp er_Threshold	INT	Upper temperature (C) at which to declare an alarm
Temperature_Alarm_Lo wer_Threshold	INT	Lower temperature (C) at which to declare an alarm
Contact_Status	SINT	2 Bits per contact. 00=Not Present, 01=Open, 10=Closed.
Temperature_C	INT	Temperature in degrees C. Only available on devices that support temperature.
Temperature_F	INT	devices that support temperature.

Reset_MIB_Counts	DINT[2]	Reset port MIB counters. (1 bit per port to reset).	
Device MAC Address SINT[6]		MAC address of device	
		Bit mask of device roles. Bits= $0 = N$ -Ring	
		Manager $1 = N$ -Ring Member $2 = N$ -Ring	
		AutoDetect $3 = N$ -Link Master $4 = N$ -Link	
Device_Role	DINT	Slave 5 = N-Link Coupler	
Config_Device_Status SINT 0 = Not Sup		0 = Not Supported, 1 = Not Present, 2 = Present	
		Bit mask of system config. Bits = $0 = $ Save	
		system configuration to flash $1 =$ Shutdown and	
System_Configuration	DINT	reboot device	
System_Firmware_Versi		Human readable representation of firmware	
on_String	STRING	version string.	
System_Boot_Loader_Ve		Human readable representation of boot loader	
rsion_String	STRING	version string.	
	UDT_NTR	Human readable representation of error status.	
	ON_String1	May contain multiple errors. Length is contained	
System_Fault_String	024	as part of the STRINGI data type.	

4. Rockwell Automation® FactoryTalk® - Faceplate Installation

4.1 Material Prerequisites

- N-Tron® 700-series switch
- FactoryTalk View ME/SE Faceplate Displays

4.2 Installation Instructions

4.2.1 Software Installation Prerequisites

- FactoryTalk View Studio ME/SE version 5 or later
- N-Tron series switch with firmware version 3 or later

4.2.2 Summary of Faceplate Installation Steps

- 1. Create shortcut to PLC
- 2. Add global objects to your project
- 3. Add local messages
- 4. Add images
- 5. Import HMI tags
- 6. Create faceplate display
- 7. Configure display startup macro
- 8. Configure display parameter file
- 9. Optionally add composite switch image to display
- 10. Optionally add specific switch image to display

In the instructions below, "ME" refers to FactoryTalk View ME (Machine Edition) and "SE" refers to FactoryTalk View SE (Site Edition).

4.3 Configuration of FactoryTalk View Faceplate Displays

Extract all files from the zip file to your desktop or some other folder.

Start with an existing FactoryTalk View ME/SE application.

4.3.1 Configure a Shortcut to the PLC Running the NTRON AOI.

1. Double click Communications Setup.

2. In the following screenshot, the shortcut is named PLC.

2	Communication Setup - RNA://\$Local/NT	RON_demo/RSLin	c Enterprise		
Γ	Device Shortcuts	Design (Local) Ru	ntime (Target)		
L	Add Remove Apply			Copy from Design to Runtim	e
PLC		prise, 119-ENGINEERING			
L		🗄 🖅 1789-A1	7, Backplane		
L		🖻 🚠 EtherNe	t, Ethernet

	132.168.1.87, , N-TRON 708TX 6				
		Mode: Online Not	Browsing		

3. Click the "Yes" button and if ME, click the "Copy from Design to Runtime" button.

4.3.2 Import Graphics into your Project

1. Right-click on Global in the Graphics folder and select Import and Export from the pop up.

2. Click on the radio button as shown and click Next.

Revised 2016-01-19	
	Graphics Import Export Wizard - Operation Type
	Select the operation to perform:
	Export graphic information from displays
	Import graphic information into displays
	< <u>Back</u> <u>N</u> ext > Cancel Help

3. Click on the desired radio button as shown and click Next.:

Graphics Import Export Wizard - Backup			
Do you want to backup the displays that will be modified by the import?			
C Yes			
No			
< <u>B</u> ack <u>N</u> ext > Cancel Help			

4. Click on the desired option radio button as shown and click Next.

Graphics Import Export Wizard - Import File Type				
Select the type of file to import:				
Single display import file				
Multiple displays batch import file				
< <u>B</u> ack <u>N</u> ext > Cancel	Help			

5. The following dialog screen should appear.

Graphics Import Export Wizard - Multiple Import File	×	
Select the multiple display batch import file: C:\Temp\FactoryTalk_View_ME\Display_export\Install\BatchImport_Global NTRON.xml]	
When importing © Create new objects on the display		
C Update existing objects on the display		
Whether you create new objects or update existing objects on the display can also be specified within the multiple displays batch import file and will override the setting defined above.		
< <u>B</u> ack Finish Cancel Help	_	

- 6. For SE, use the FactoryTalk_View_SE folder in the above dialog.
- 7. The following global objects should appear in the Explorer window:

4.3.3 Import Local Messages

1. Select the folder (FactoryTalk_View_ME\Display_export\local) containing the local message files (.loc). Import all N-Tron*.loc files.

2. The Explorer window should show these files:

4.3.4 Import Images

1. Select the folder (FactoryTalk_View_ME\Display_export\Install\images) containing the image files (.bmp). Import all NTRON*.bmp files.

2. The Explorer window should show several new files:

4.3.5 Import Tags

Import tags using the Tag Import and Export Wizard.

- 1. Select the NTRON-Tags.CSV to import(FactoryTalk_View_ME\Display_export\Install\tags).
- 2. The result should be these tags:

	Tag Name	Туре	Description
1	NTRON_Help	Digital	
2	NTRON_Settings_Selection	Analog	
3	NTRON_Trend_Selection	Analog	
4			

4.3.6 Access Faceplate Displays

To access the faceplate displays, create a display using the global object NTRON_Display. (File > New > Display.

- 1. Select all objects in the NTRON_Display global object and paste them into the new display. Save the new display.)
- 2. Configure a macro for opening your display. Here is the ME form for this example:

📓 NTRON_Open_228 - /NTRON_demo/ (Macros)					
Form:	Form: <tag> = <expression></expression></tag>				
	Tag	Tag	Expression	Exprn	
1	{[PLC]N228Params.Control.HMI[0].Display_Mode}	•••	1	••••	
2		•••		•••	

Tag from screenshot: {[PLC]N228Params.Control.HMI[0].Display_Mode}

3. Here is the SE form displayed

Tag from screenshot: &{[PLC]N228Params.Control.HMI[0].Display_Mode} = 1;

Note: In the macro definition (and later in the parameter file), the shortcut "PLC" was created earlier. The other important piece is "N228Params", which is the name of the Switch_Parameters tag created for the NTRON_SWITCH AOI in your RSLogix project. Example:

	switch		
	AOI_NTRON_	SWITCH	1
_	AOI for N-TRON switch		-
	AOI_NTRON_SWITCH	N228	
	Switch_Inputs	N228:I.Data	
	Switch_Output	N228:0.Data[0]	
		0 🗧	
	Switch_Parameters	N228Params	
	Get_Message	N228GetMsg 🛄	
	Get_Message_Extended	N228GetMsgExt 🛄	
	Storage	N228Storage	
	Set_Message	N228SetMsg 🛄	
	SetData	N228SetData	

- 4. In the Display Settings for the NTRON_Display (open the NTRON_Display display, Edit > Display Settings)
- 5. Click the Behavior panel and assign the newly created macro as the startup macro.

Display Settings	
General Behavior	Behavior of Object with Input Focus
Startup: NTRON_Open_228	Disable Highlight When Object has Eocus Highlight Color:
Shutdow <u>n</u> :	
о ОК	Cancel Apply <u>H</u> elp

- 6. Click the General tab and change Display Type and Size.
- 7. Here is the ME form displayed:

Display Settings	
General Behavior Display Settings Display Type C Replace On Top Cannot Be Replace	Size © Use Current Size © Specify Size in Pixels <u>W</u> idth: 364 Height: 456
Digplay Number: Security Code: * Title Bar Disable Initial Input Focus Maximum Tag Update Rate:	Position X: 0 Y: 0 Background Color:
seconds	OK Cancel Apply <u>H</u> elp

8. Here is the SE form displayed:

Display Settings	
Properties Behavior	
Display Type C <u>R</u> eplace C <u>Ov</u> erlay <u>Keep at Rack</u> C <u>On Top</u>	Size
 Allow <u>M</u>ultiple Running Copies Cache After Displaying No Yes Always Updating 	Resize Allow Display to be Resized When Resized © <u>P</u> an
I Title <u>B</u> ar	Position © Use Current P <u>o</u> sition © Specify Position i <u>n</u> Pixels

ОК	Cancel Set as Default <u>H</u> elp

4.3.7 Configure Display Parameters

- 1. On the display where you wish to show the faceplate, create a Goto Display button.
- 2. Create a parameter file that will be associated with the button.

- 3. Substitute your shortcut for "PLC" and the name of your Switch_Parameters for N228Params, in the parameter file.
- 4. Assign a display and parameter file to the Goto Display button.
- 5. Here is the ME form displayed:

Goto Display Button Properties			
General Label Common			
Display settings			
Display: P	Parameter file:		
NTRON_Display N	NTRON_demo		
1 op position: L	ert position:		

6. Here is the SE form displayed:

4.3.8 Optionally Add Composite Switch Image to Display

You can also display an image of an NTRON switch using the global object NTRON_graphic. When used, define Global Object Parameter #1 as follows:

Global Object Parameter Values				×		
ſ		Name	Value	Tag	Description	
	1	#1	[PLC]N228Params	•••	Path to Switch_Parameters, like [PLC]N228Params	-

4.3.9 Optionally Add Specific Switch Image to Display

The NTRON_graphic global object is a composite of several N-Tron switches. Due to the number of switches, and the tags used for each switch, you may run into the limit for maximum tags allowed on a display.

To work around this limitation, use individual global objects for each switch.

- 1. Import individual global objects using the BatchImport_Global_NTRON_Switches.xml import file.
 - The global object names contain the switch name, such as NTRON_708TX.
- 2. Setup Global Object Parameter #1 as described for the NTRON_graphic object.
- 3. For more information on the displays, including screen shots, see the Faceplate Quick Reference.

4.3.10 FactoryTalk View SE Client Setup

4.4 Sample Project

To view a sample project refer to the ME or SE sample project archive named NTRON_demo.apa.

If you have any suggestions for improving the faceplate's or the installation instructions, please send them to support@redlion.net with subject "FactoryTalk Faceplates".

5. Rockwell Faceplate Quick Reference Guide

5.1 Introduction

The Faceplates consists of several displays:

- Home
- Diagnostics
- Settings, and
- Alarm

Click the buttons at the top of the screen to navigate between the displays.

The "?" button is used to toggle the display of help text, and the "X" button is used to exit the Faceplate's.

The caption at the top of the screen includes the switch product name and the user assigned switch name, separated by a colon.

5.2 Home Display

The Home Display shows general switch information. The trend shows CPU utilization.

N-TRON 7018FX2: N-Tron Switch fe:8f:a0		
	I I	2 🛛
	IP Address	192.168.1.228
	Subnet Mask	255.255.255.0
9 - - ⁽⁾	MAC Address	00.07.AF.FE.8F.A0
50 50	Software Version	3.0.2 (next)
2	Power Input	V1
XXXX	Contact Status	Closed
	N-Ring Status	Fault
	IGMP Querier	Backup-Auto
	IGMP Utilization	1
1	Role	N-Ring Manager
6		
× 8	CPU Utilization	34
<u>ه</u> [Wedne	sday, August 12, 2009
18	41	
8		
2 ⁻¹		A A A A SA A A A
5 8	10:05:16 AM	10:06:16 10:07:16 AM
9 5 8 V	📕 🗖 Active 🔲 Inactive	📕 Disabled 📕 Error 📕 Fault

Some fields show simple values, such as IP Address. Other fields, such as Device Role, show values that depend on the switch configuration. Fields that do not apply to a specific switch model will be hidden.

The following table describes the Home Display fields and values.

Field	Values	Description
IP Address	Like 192.168.1.201	Switch IP address
Subnet Mask	Like 255.255.255.0	Switch subnet mask
MAC Address	Like 00:07:AF:FE:8F:A0	MAC address of switch
Software Version	Like 3.0.2	Software version of switch
Power Input	V1	V1 – Power Supply 1
	V2	V2 – Power Supply 2
	V1 and V2	
	Unknown	
	AC/DC Power	
Contact Status	Not Supported	The status of the contact on the

	Open	switch
	Closed	5 witch.
N-Ring Status	Fault	The N-Ring status, if the switch is
N-King Status	Partial Low	configured as an N Bing manager
	Dertial High	configured as an N-King manager.
	Partial-Figh	
	Multiple-Managers	
	N/A (if N-Ring auto-member, or N-Ring	
	disabled)	
	Unknown (if N-Ring member)	
IGMP Querier	Disabled	Internet Group Management
	Active-Manual	Protocol Querier status
	Active-Auto	
	Backup-Auto	
	Unknown	
IGMP Utilization	0-100 percent	Internet Group Management
		Protocol Utilization
Config Device	Not Supported	This field is displayed for
	Not Present	switches that support a
	Present	configuration device.
	Unknown	
Role	N-Ring Manager	The role of the switch which is
	N-Ring Member	based on the switch configuration.
	N-Ring AutoMember	Suber on the system comparation
	N-L ink Master	
	N-Ring Mem N-Link Master	
	N-Ring Auto N-Link Master	
	N Link Slove	
	N Ding Mom. N Link Slove	
	N Ding Auto N Link Slave	
	N-King Auto, N-Link Slave	
	N-Link Coupler	
	N-King Mem, N-Link Coupler	
	N-King Auto, N-Link Coupler	
	Unknown	
CPU Utilization	0-100 percent	CPU utilization percentage
CPU Trend	0-100 percent	Trend of CPU utilization

The color of each port, on the switch image, changes based on the port state as described in the following table.

Port Color	Port State
Active	The port is active
Inactive	The port is inactive
Disabled	The port is administratively disabled
Error	A port utilization limit, high or low, has been exceeded

The LED at the top of the switch graphic will be green if there are no faults, red if a fault has occurred. Faults can be viewed on the alarms display.

5.3 Diagnostics Display

The diagnostics display shows information for a selected switch port. Use the buttons at the bottom to select a switch port and use the buttons at the left to select a port variable to trend. The highlighted variable is trended at the bottom.

N-TRON 7018FX2: N-Tron Switch fe:8f:a0			
		1	
Port T	X10 Diagnostics		
Link U	р	Yes	
Speed	/Duplex	100/Full	
Admin	Enabled	Yes	
Port R	ole	Normal	
	Bandwidth Utilization	0	
	RX Broadcast FPS	0	
	TX Broadcast FPS	0	
	RX Multicast FPS	5	
	TX Multicast FPS	3	
	RX Unicast FPS	2	
	TX Unicast FPS	U

10:10	0:23 AM 10	0:11:23	10:12:23 AM
		TX10	

The following table describes Diagnostic Display fields and values.

Field	Values	Description
Link Up	Yes	Current link state
	No	
Speed/Duplex	10/Full	This configurable field displays the current speed and
	100/Full	mode of the port
	1000/Full	
	10/Half	
	100/Half	
	1000/Half	
	Unknown	
Admin Enabled	Yes	This configurable field displays the existing status of the
	No	port whether it is Enabled/Disabled

Revised 2016-01-19		
Port Role	RSTP N-Ring N-Link Control N-Link Partner RSTP, N-Link Partner N-Ring, N-Link Partner N-Link Coupler RSTP, N-Link Coupler	The role of the port, which is based on the switch configuration. Some combinations are possible. For more details, see the user manual for the 700 switch family.
Bandwidth Utilization	0-100 percent	Bandwidth utilization displayed as a percentage
RX Broadcast FPS		The frames per second rate of received broadcast frames
TX Broadcast FPS		The frames per second rate of transmitted broadcast frames
RX Multicast FPS		The frames per second rate of received multicast frames
TX Multicast FPS		The frames per second rate of transmitted multicast frames
RX Unicast FPS		The frames per second rate of received unicast frames
TX Unicast FPS		The frames per second rate of transmitted unicast frames
Port Errors		The sum of alignment errors, FCS errors, SQE Test errors,
		excessive collisions, MAC transmit errors, carrier sense
		errors, frame too long, and MAC receive errors

5.4 Settings Display

The settings display allows some switch port related settings to be changed.

Use the buttons at the bottom to select a switch port and use the buttons at the left to select a port setting to change. Use the wide up/down buttons toward the bottom to select a value, and the Enter button to accept the change.

	N-TRON 7018FX2:	N-Tron Sv	witch fe:8f:	:a0
		1	?	×
	Port TX10 Settings			
	Speed/Duplex	100,	/Full	
	Admin Enabled	Yes		
▼				
Aut	to-Negotiate			Enter
10/	'Half 'Full		<u> </u>	
100)/Half)/Eull			
	ser un			
		TV40		

The following table describes the Settings Display fields and values.

Field	Value	Description
Speed/Duplex	10/Full	This configurable field displays the
	100/Full	current speed and mode of the port
	1000/Full	
	10/Half	
	100/Half	
	Unknown	
Admin Enabled	Yes	This configurable field displays the
	No	existing status of the port whether it is
		Enabled/Disabled

5.5 Alarm Display

The alarm display shows the status of several alarms. Alarms with a gray background and an "N/A" suffix do not apply for the switch type, or for the current configuration of the switch.

N-TRON 7018FX2: N-Tron Switch fe:8f:a0	
A 10 10 10 10 10 10 10 10 10 10 10 10 10	×
Power Supply 1 OK	
Power Supply 2 Error	
Boot Loader Version OK	
Port Utilization Error	
N-Link N/A	
N-Ring Error (Redundancy Lost)	
Low voltage on power supply V2.; N-Ring Fault.; Port Utilization Low: TX5	

Values ending with "OK" will be green, values ending with "Error" will be red, and those with "N/A" will be gray. Fields that do not apply to a specific switch model will be hidden.

The following table describes the Alarm Display fields and values.

Field	Values	Description
Power Supply 1	Power Supply 1 OK	V1
	Power Supply 1 Error	
Power Supply 2	Power Supply 2 OK	V2
	Power Supply 2 Error	
Boot Loader Version	Boot Loader Version OK	
	Boot Loader Version Error	
Port Utilization	Port Utilization OK	Shows error if utilization
	Port Utilization Error	limits on any port is exceeded
N-Link	N-Link OK	Shows N/A if not configured
	N-Link Error	for N-Link
	N-Link N/A	
N-Ring	N-Ring Error (Redundancy Lost)	Shows N/A if not configured
	N-Ring Error (Partial Low)	for N-Ring
	N-Ring Error (Partial High)	
	N-Ring Error (Multiple Managers)	
	N-Ring Error (Redundancy Lost, Mult Mgrs)	
	N-Ring Error (Partial Low, Mult Mgrs)	

Revised 2016-01-19		
	N-Ring Error (Partial High, Mult Mgrs) N-Ring OK N-Ring N/A	
Configuration Device	Configuration Device OK	This field is displayed if the
	Configuration Device Error	switch supports a
	Configuration Device N/A	configuration device
Temperature	Temperature OK	This field is displayed if the
	Temperature Error	switch supports a temperature
	Temperature N/A	sensor

The system fault string is shown at the bottom of the display.
