## Description

B-KON Flashers have proven their reliability through years of use on Communication Towers, Smoke Stacks, Cooling Towers, Tall Buildings, Bridges and Utility Towers. The highest quality components are encapsulated in a rugged plastic housing with a molded-in heat transfer plate. The flash rate, ratio, and fail-safe design meet FAA regulations. Zero voltage switching can increase lamp life up to ten times. The FS155-30RF \& FS165-30RF include superior RF Filtering Circuitry for use in high RF installations; including AM Hot Towers.

## Operation

Upon application of input voltage, the T2 OFF time begins. At the end of the OFF time, the T1 ON time begins and the load energizes. At the end of T1, T2 begins and the load de-energizes. This cycle repeats until voltage is removed.
Reset: Removing input voltage resets the output and the sequence to T 2 .

F = Flasher (FS155-30T, FS 155-30RF,
FS165-30T, FS 165-30RF)
AX = Auxiliary Unit
B = Beacon
DL = Dummy Load for Constant Line Loading
$\mathrm{Rd}=3.3 \mathrm{~K} \Omega$ @ 5 W for 120 V AC $8.5 \mathrm{~K} \Omega$ @ 5 W for 230 V AC
Dashed lines are internal connections.
