# Single Shot (Pulse Former) TDUS Digi-Set <br> Timing Module 

- S witch Selectable Time Setting
■ 0.1 s ... 102.3 m in 3 Ranges
■ +/- 0.5\% Repeat Accuracy
- +/- $2 \%$ Setting Accuracy
- 1 A Solid State Output
- Encapsulated

■ Wide Voltage Ranges

Approvals: A1

## Description

The TDUS Series combines digital timing circuitry with universal voltage operation. Voltages of 24 to 240 VAC and 12 to 24 V DC are available in three ranges. The TDUS Series offers DIP switch selectable time delays ranging from 0.1 seconds to 102.3 minutes in three ranges. Its 1 A rated output, ability to operate on multiple voltages, and wide range of switch selectable time delays make the TDUS Series an excellent choice for process control systems and OEM equipment.

## Operation

Input voltage must be applied before and during timing. Upon momentary or maintained closure of the initiate switch (leading edge triggered), the output energizes for a measured interval of time. At the end of the delay, the output de-energizes. Opening or reclosing the initiate switch during timing has no affect on the time delay. The output will energize if the initiate switch is closed when input voltage is applied.
Reset: Reset occurs when the time delay is complete and the initiate switch is opened. Loss of input voltage resets the time delay and output.

## Function

## Connection

Dashed lines are internal connections.
UTL $=$ Optional Untimed Load $\mathrm{S} 1=$ Initiate Switch
L = Timed Load
