## Description

The TDS Series combines accurate digital circuitry with isolated 10 A rated DPDT or SPDT relay contacts in an 8 or 11 pin plug-in package. The TDS Series features DIP switch selectable time delays ranging from 100 milliseconds to 10,230 seconds in three ranges. The TDS Series is the product of choice for custom control panel and OEM designers.

## Operation

Input voltage must be applied to the input before and during timing. Upon momentary or maintained closure of the initiate switch (leading edge triggered), the output relay energizes for a measured interval of time. At the end of the delay, the output de-energizes. Opening or reclosing the initiate switch during timing has no affect on the time delay. The output will energize if the initiate switch is closed when input voltage is applied.

**Reset:** Reset occurs when the time delay is complete and the initiate switch is opened. Loss of input voltage resets the time delay and output.

## Function

S1 = Initiate Switch V = Voltage TD = Time Delay  
R = Reset NO = Normally Open  
NC = Normally Closed

## Connection

8 Pin Octal  
SPDT

Relay contacts are isolated. Dashed lines are internal connections.

11 Pin  
DPDT

S1 = Initiate Switch
