

WHEN SAFETY IS A PRIORITY

Shat-r-shield[®] INC.

Plastic-Coated, Shatterproof Lamps

The Safest, Most Cost-Efficient, Protective Lighting Available

Shat-R-Shield ADVANTAGES

- If the lamp is accidentally broken, virtually all glass, mercury and phosphors are safely contained within the clear and tough plastic coating. Employees, customers, equipment and business are protected.
- Skin-tight plastic coating will **NOT** allow dust and heat build-up, causing lower lumen output and premature lamp burnout -- as with plastic sleeves and end caps.
- Shat-R-Shield uses only the best lamps on the market such as Philips, G.E. and Osram/Sylvania.
- Standard fluorescent coating has UV stabilizers to block over 95% of UV emission.
- Coatings will not yellow, deteriorate, crack or flake.
- Light output loss is less than 1%.
- Even an 8-ft. lamp can be easily and safely installed by just one person.
- Safe installation and disposal - you never touch bare, unprotected glass.
- Protective lighting is **required** in many industries.
