Detailed technical data

Performance

| | |
|---|--|
| Number of steps per revolution (max. resolution) | 360 Any number of steps from 00002 to 32768 possible. Always 5 characters in cleartext. |
| Error limits G | 0.035° (binary number of steps) ¹⁾ 0.046° (non-binary number of steps) |
| Repeatability standard deviation σ_r | 0.005° ²⁾ |

¹⁾ In accordance with DIN ISO 1319-1, position of the upper and lower error limit depends on the installation situation, specified value refers to a symmetrical position, i.e. deviation in upper and lower direction is the same.

²⁾ In accordance with DIN ISO 55350-13; 68.3% of the measured values are inside the specified area.

Interfaces

| | |
|------------------------------------|--|
| Communication interface | Parallel data world |
| Initialization time | 80 ms ¹⁾ |
| SSI | |
| Code type | Gray, trimmed |
| Code sequence parameter adjustable | CW (clockwise) increasing when viewing the clockwise rotating shaft Increasing, when turning the shaft For clockwise rotation, looking in direction "A" (see dimensional drawing) |

¹⁾ Valid positional data can be read once this time has elapsed.

Electrical data

| | |
|--|--|
| Connection type | Male connector, M23, 21-pin, axial |
| Supply voltage | 10 ... 32 V DC |
| Reverse polarity protection | ✓ |
| Short-circuit protection | ✓ |
| MTTFd: mean time to dangerous failure | 300 years (EN ISO 13849-1) ¹⁾ |

¹⁾ This product is a standard product and does not constitute a safety component as defined in the Machinery Directive. Calculation based on nominal load of components, average ambient temperature 40 °C, frequency of use 8760 h/a. All electronic failures are considered hazardous. For more information, see document no. 8015532.

Mechanical data

| | |
|--------------------------|--------------------------------|
| Mechanical design | Solid shaft, face mount flange |
|--------------------------|--------------------------------|

| | |
|---|-----------------------------------|
| Shaft length | 18 mm |
| Shaft diameter | 10 mm |
| Weight | 0.3 kg |
| Housing material | Aluminum die cast |
| Start up torque | 0.4 Ncm |
| Operating torque | 0.3 Ncm |
| Permissible Load capacity of shaft | 20 N / radial 10 N / axial |
| Moment of inertia of the rotor | 54 gcm ² |
| Bearing lifetime | 3.6 x 10 ⁹ revolutions |
| Angular acceleration | ≤ 500,000 rad/s ² |

Ambient data

| | |
|--------------------------------------|---|
| EMC | According to EN 61000-6-2 and EN 61000-6-3 ¹⁾ |
| Enclosure rating | IP65, with mating connector fitted (according to IEC 60529) |
| Permissible relative humidity | 90 % (condensation of the optical scanning not permitted) |
| Operating temperature range | -20 °C ... +85 °C |
| Storage temperature range | -40 °C ... +100 °C |
| Resistance to shocks | 50 g, 11 ms (according to EN 60068-2-27) |
| Resistance to vibration | 20 g, 10 Hz ... 2,000 Hz (according to EN 60068-2-6) |

¹⁾ EMC according to the standards quoted is achieved if shielded cables are used.

- ¹⁾ Set line only possible with a cable outlet.
- U_s Supply voltage to the encoder (before commissioning, note must be taken of the type label of the encoder).
- GND Zero volt connection to the encoder; electrically isolated from the housing. The voltage referred to GND is U_s.
- V/R₋ Forward/reverse: this input programs the counting direction of the encoder. If not connected, this input is -high-. If the encoder shaft, as viewed on the drive shaft, rotates in the clockwise direction, it counts in an increasing sequence. If it should count upwards when the shaft rotates in the anti-clockwise direction, this connection must be connected permanently to -low- level (zero volts).
- Enable₋ This input activates the data output driver when a -low- level is applied. If not connected, this input is -low-. In the case of a -high- level, the outputs are in the tristate mode.
- Store₋ This input stores the encoder data in Gray code when a -low- level is applied. This avoids a read error if the output data is requested in binary code. If this input is -low-, the data at the encoder output is stable, irrespective of whether the input shaft rotates. If not switched, this input is -high-.
- Parity This output supplies a -high- level when the binary checksum of the data bits is even.
- SET This input serves to set the zero electronically. If the SET line is connected to U_s for more than 100 ms, the mechanical position corresponds to the value 0.

SICK AT A GLANCE

SICK is one of the leading manufacturers of intelligent sensors and sensor solutions for industrial applications. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in a wide range of industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services complete our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is “Sensor Intelligence.”
